

INSTRUCTION MANUAL

OmniBot 2000™

CAUTION:
**ELECTRICALLY
OPERATED PRODUCT**

NOT RECOMMENDED FOR
CHILDREN UNDER 9 YEARS OF
AGE. AS WITH ALL ELECTRIC
PRODUCTS, PRECAUTION
SHOULD BE OBSERVED
DURING HANDLING AND USE TO
PREVENT ELECTRIC SHOCK.

IMPORTANT:

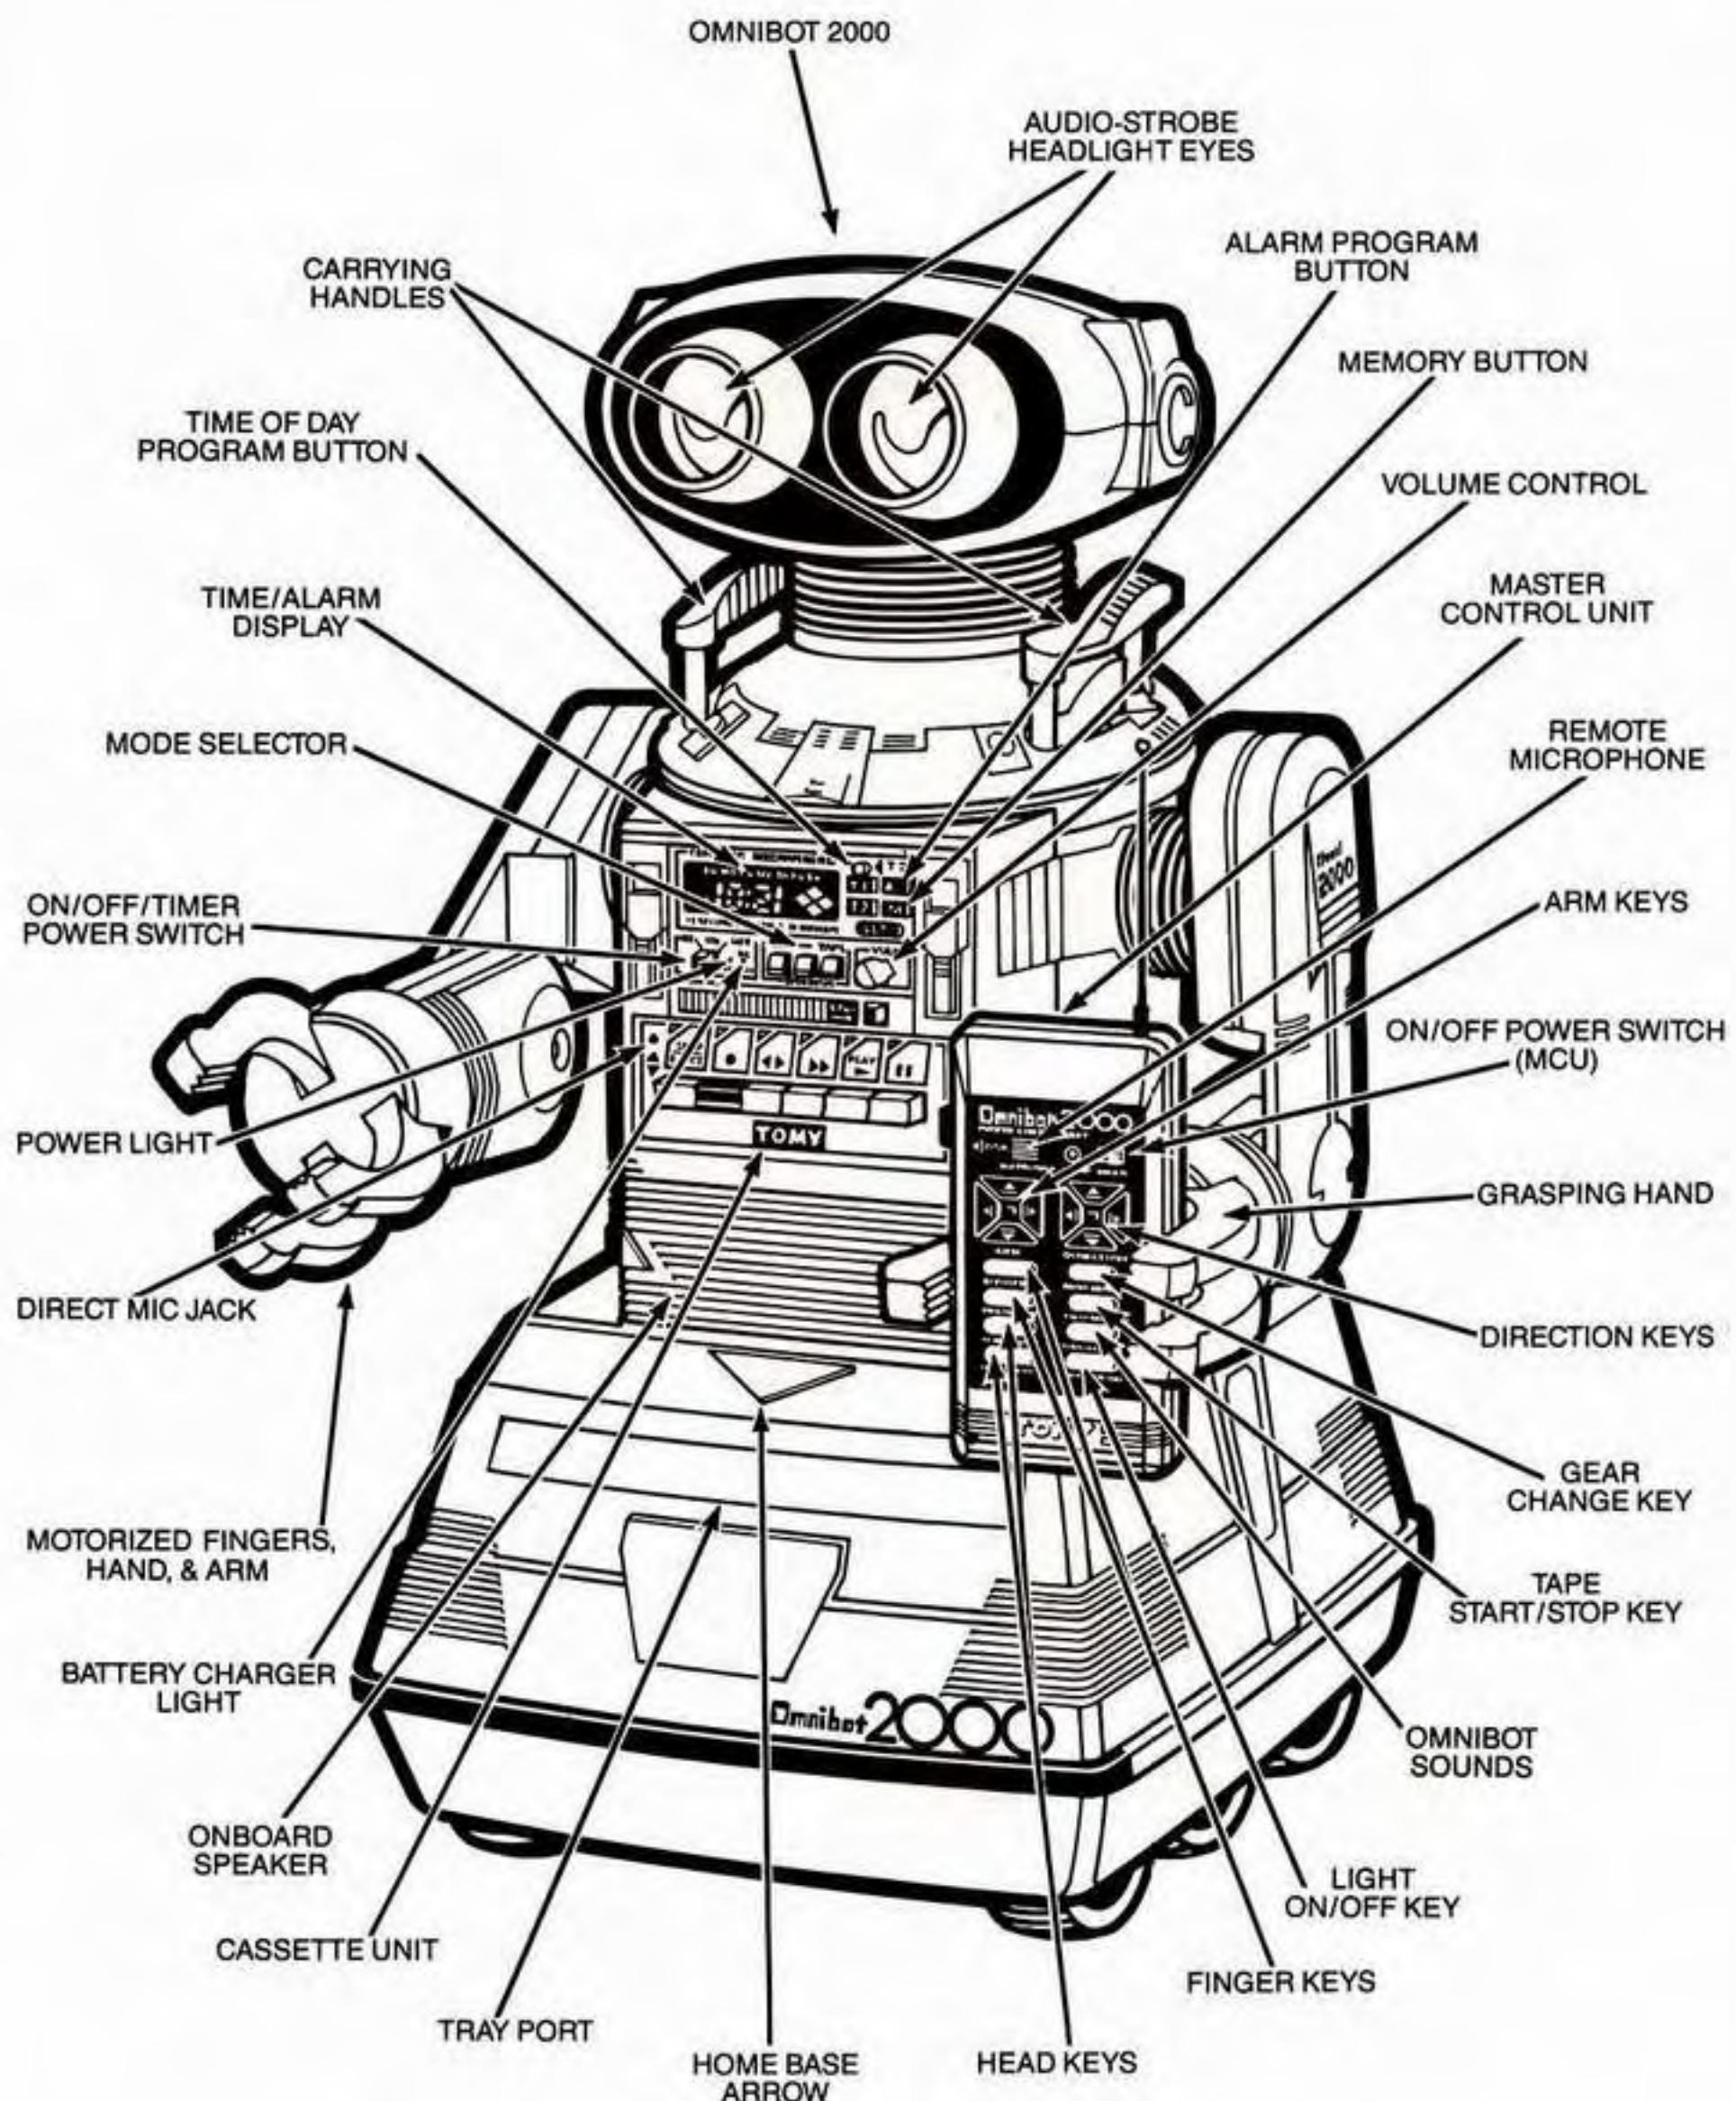

DO NOT OPERATE OMNIBOT UNTIL
BATTERY IS FULLY CHARGED. SEE NOTE
ON PAGE 3.

WARNING:

ALWAYS PICK UP OMNIBOT 2000 BY
THE CARRYING HANDLES, NEVER BY
THE ARMS OR SERIOUS DAMAGE WILL
RESULT. THIS IS VERY IMPORTANT!

NO. 5405

TOMY®

NOTE:

OMNIBOT 2000 SHOULD NOT BE OPERATED UNTIL IT HAS BEEN FULLY CHARGED. BATTERY SHOULD BE CHARGED BY ADULTS ONLY. CHARGING WILL TAKE 12-16 HOURS. IN SOME CASES, IT IS POSSIBLE THAT OMNIBOT 2000 MAY

RUN BEFORE CHARGING. IT IS VERY IMPORTANT THAT YOU DO NOT USE OMNIBOT 2000 AT THIS TIME—CHARGE IT FIRST (12-16 HOURS). IF YOU DO NOT CHARGE IT A FULL 12-16 HOURS BEFORE USE, YOU WILL SEVERELY SHORTEN BATTERY LIFE. THIS IS VERY IMPORTANT.

WARNING:

ALWAYS PICK UP OMNIBOT 2000 BY THE CARRYING HANDLES, NEVER BY THE ARMS OR SERIOUS DAMAGE WILL RESULT. THIS IS VERY IMPORTANT!

BEFORE YOU START YOU WILL NEED:

- 6 "AA" Alkaline Batteries
- Small Phillips Screwdriver

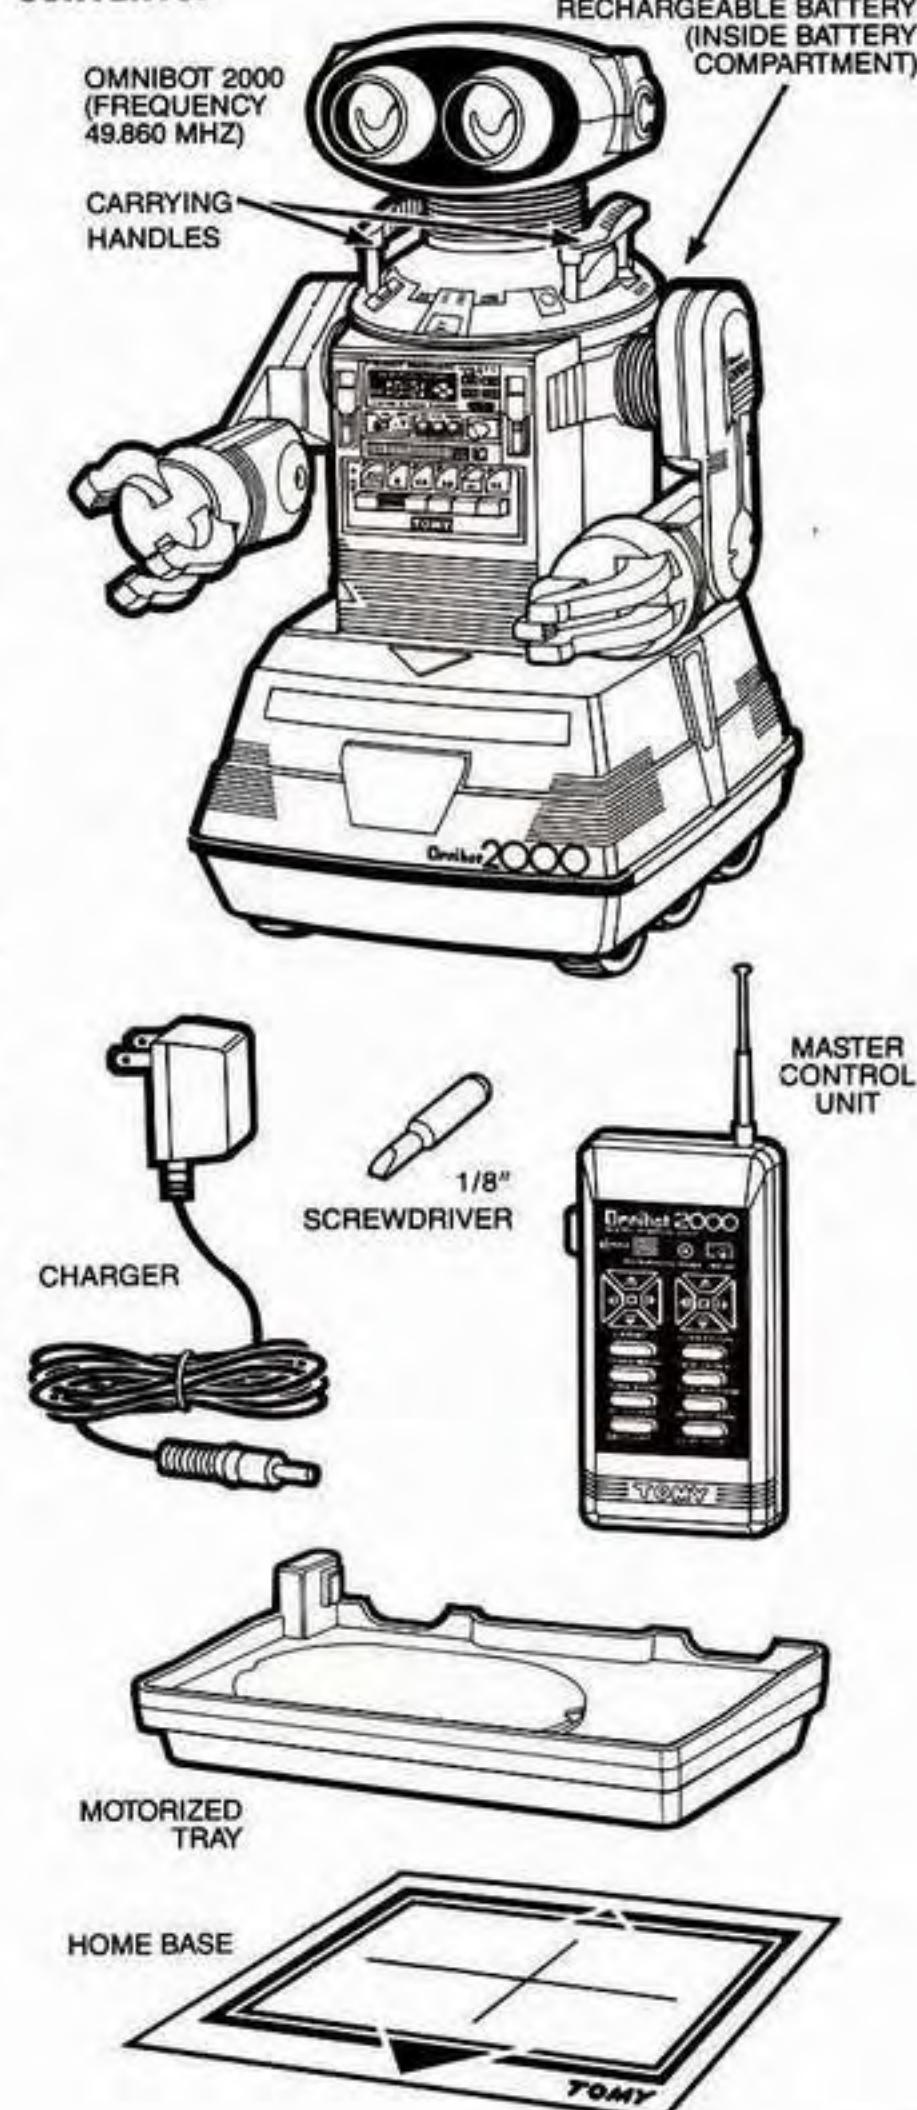

IF YOU HAVE ANY QUESTIONS, REFER TO QUICK-CHECK CHART ON BACK PAGE.

If you still have problems, CALL US AT THIS TOLL FREE NUMBER FOR ASSISTANCE:

(800) 421-5597 FOR OUTSIDE CALIFORNIA

(800) 421-8496 FOR CALIFORNIA RESIDENTS

TO SAVE TIME, BE SURE TO HAVE OMNIBOT 2000 AND YOUR INSTRUCTIONS BY THE PHONE WHEN YOU CALL OUR SERVICE ASSISTANT.

CONTENTS:

I. INTRODUCTION & FEATURES

Omnibot 2000's Instruction Manual has been thoroughly written to cover all features and possible problems you may encounter. If you have difficulty in a certain area, re-read the appropriate section to re-fresh your memory. You should read the entire instruction booklet. **THIS WILL TAKE TIME.** If you jump into setting up or using Omnibot before you've read each section in its entirety and in proper sequence, you may become frustrated. So, sit down, relax, and read. You will discover many exciting features that you might have overlooked by hurrying. Save this booklet. Keep it handy for future reference.

AFTER READING THIS INTRODUCTION, YOU WILL LEARN HOW TO CHARGE AND INSTALL THE BATTERIES. ONCE OMNIBOT 2000 IS CHARGING, YOU CAN:

1. Program the Time of Day and Alarm Settings (Sections IV & V).
2. Read the Basic Cassette Operation (Section VI).
3. Find an appropriate place for Home Base (Section XIV).

4. Read about Omnibot 2000's Care & Maintenance and Safety/Cautions (Sections XX & XXI).
5. Plan some ideas for Omnibot 2000's use (Section XXII).

ONCE OMNIBOT 2000 IS FULLY CHARGED:

1. Try the different Modes (Sections VII, VIII, IX, & XV).
2. Check the Steering (Section XIII).
3. Program cassettes (Section XVI).
4. Try out the External Jacks (Section XIX).

IF YOU HAVE ANY QUESTIONS, call this toll free number for assistance:

(800) 421-5597 FOR OUTSIDE CALIFORNIA
(800) 421-8496 FOR CALIFORNIA RESIDENTS

To save time, be sure to have Omnibot 2000 and this Instruction Manual by the phone when you call our service assistant.

OMNIBOT 2000 FEATURES:

- A built-in digital clock
- A built-in Cassette Unit
- A programmable alarm system with 3 different alarm sounds
- A programmable cassette system to start & stop tapes at any time
- A memory capable of holding 7 different programs
- An onboard speaker to mix your voice with pre-recorded music
- Remote control operation with the Master Control Unit

- Program movement, voice, and robot sounds onto tapes that can be played back for later execution
- Automated arm, wrist, hand, and head
- A motorized tray for carrying and delivering objects and serving drinks
- A Home Base to assist in programming functions
- Audio-strobe Headlight eyes
- Accessory Interface Panel for optional Omnibot accessories
- External jack for adding on a speaker
- A rechargeable battery and charger

II. BATTERIES & FUSE

WARNING:

OMNIBOT SHOULD NOT BE OPERATED UNTIL HE HAS BEEN CHARGED. CHARGING WILL TAKE 12-16 HOURS—IN SOME CASES, IT IS POSSIBLE THAT OMNIBOT WILL OPERATE BEFORE CHARGING. IT IS VERY IMPORTANT THAT YOU DO NOT USE OMNIBOT AT THIS TIME—CHARGE HIM FIRST!

IF YOU DO NOT CHARGE OMNIBOT A FULL 12-16 HOURS BEFORE USE, YOU WILL SEVERELY SHORTEN BATTERY LIFE. THIS IS VERY IMPORTANT. AGAIN, BATTERY SHOULD BE CHARGED BY ADULTS ONLY.

Omnibot's power supply consists of:

- A. One 6 Volt rechargeable battery (included).
NOTE: THE BATTERY IS MADE ESPECIALLY FOR OMNIBOT. DO NOT ATTEMPT TO USE ANY OTHER KIND OF BATTERY AS IT MAY CAUSE DAMAGE. SHOULD YOU NEED ONE, YOU CAN ALWAYS ORDER ANOTHER BATTERY WITH THE ORDER FORM.
 - B. 2 "AA" Alkaline Batteries for Clock/Alarm/ Memory Display.
 - C. 4 "AA" Alkaline Batteries for Master Control Unit.
- THE BATTERY SHOULD BE REPLACED BY AN ADULT.

SAFETY PRECAUTIONS

Batteries contain corrosive fluids and toxic materials. They should be handled with care. Do not mutilate, puncture, disassemble, or incinerate battery!

FIRST AID

If the battery case cracks or breaks open, do not touch the gel under any circumstances. If the gel does come in contact with skin or clothing, follow these First Aid instructions:

EXTERNAL CONTACT—Immediately flush skin or eyes with water for at least 15 minutes. Call a physician.

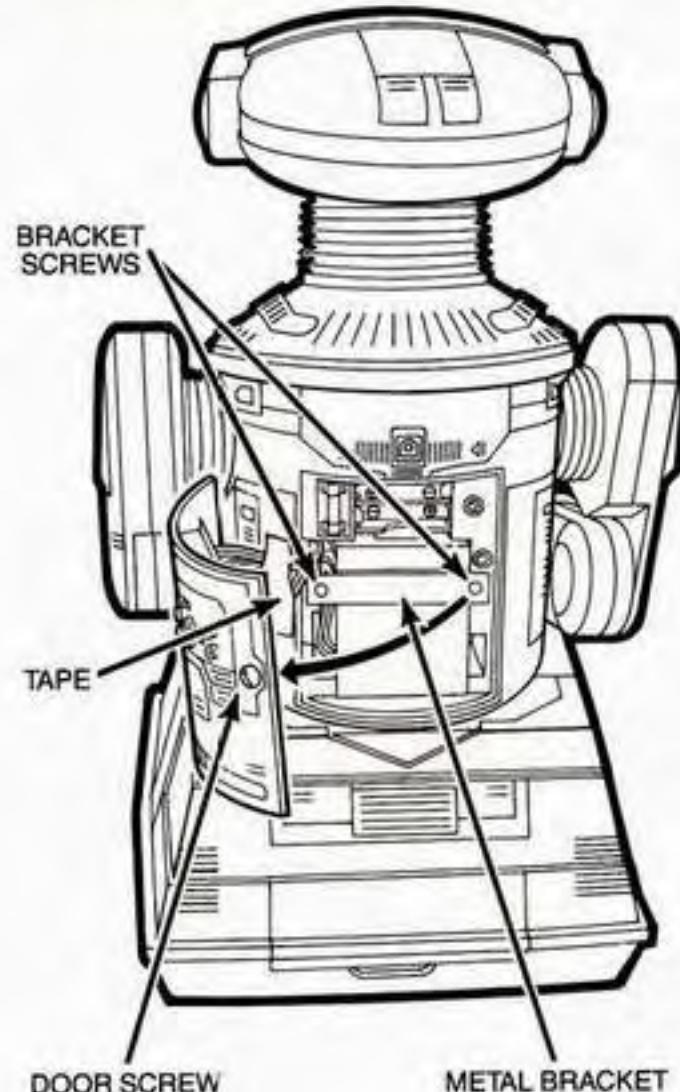

INTERNAL CONTACT—Give tap water, milk or milk of magnesia. Give whites of eggs. DO NOT INDUCE VOMITING. Call a physician.

NOTE: Make sure the ON/OFF/TIMER POWER SWITCH (see illustration on page 2) is in the "OFF" position.

1. The battery compartment door is located on the back of Omnibot.
 - A) use your screwdriver or a coin to remove the metallic door screw.
 - B) CAREFULLY & SLOWLY remove the battery compartment door. Notice the bundle of wires connected to the door; **the wires must remain connected**. Take SPECIAL CARE when using the screwdriver or you may break the wire connections.

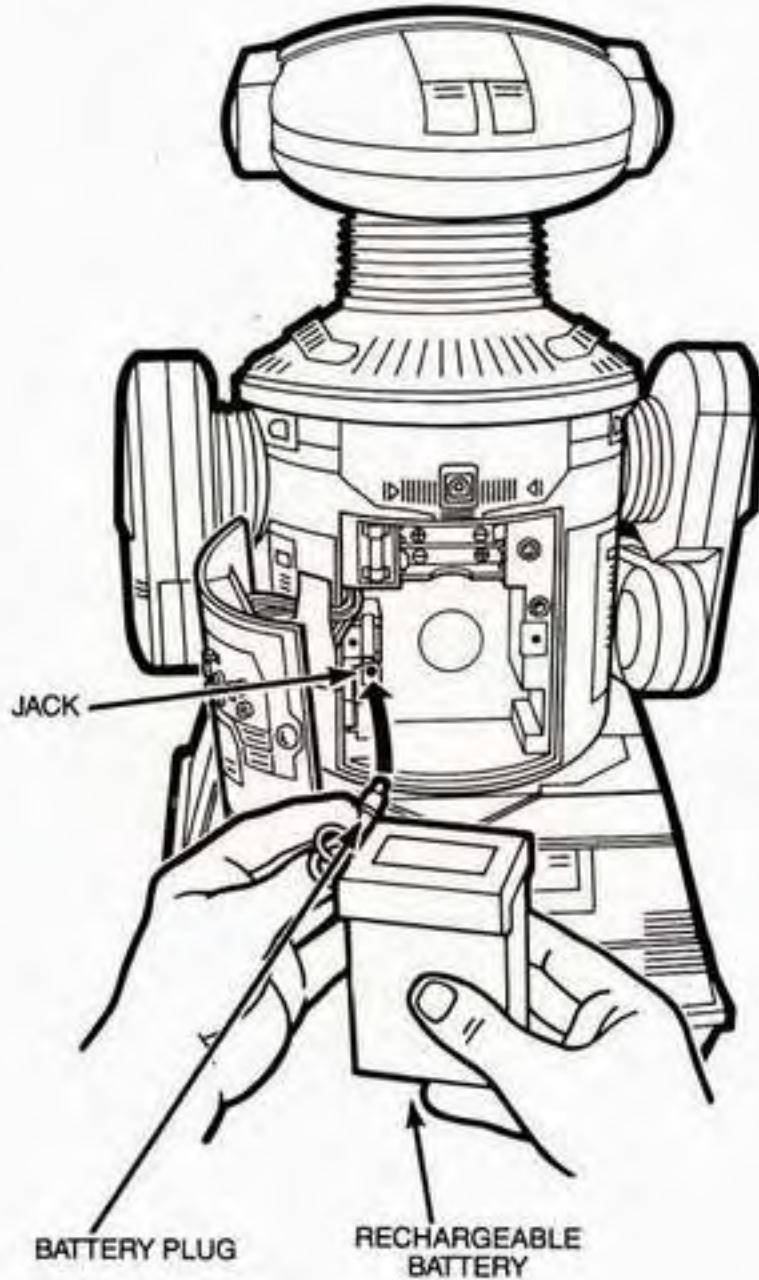

NOTE: You may find it helpful to CAREFULLY tape the bundle of wires on the side of Omnibot (see illustration). This will allow you to freely have access to the battery compartment. Use masking tape.

- C) Remove the Metal Bracket by taking out the 2 Bracket screws with your phillips screwdriver.

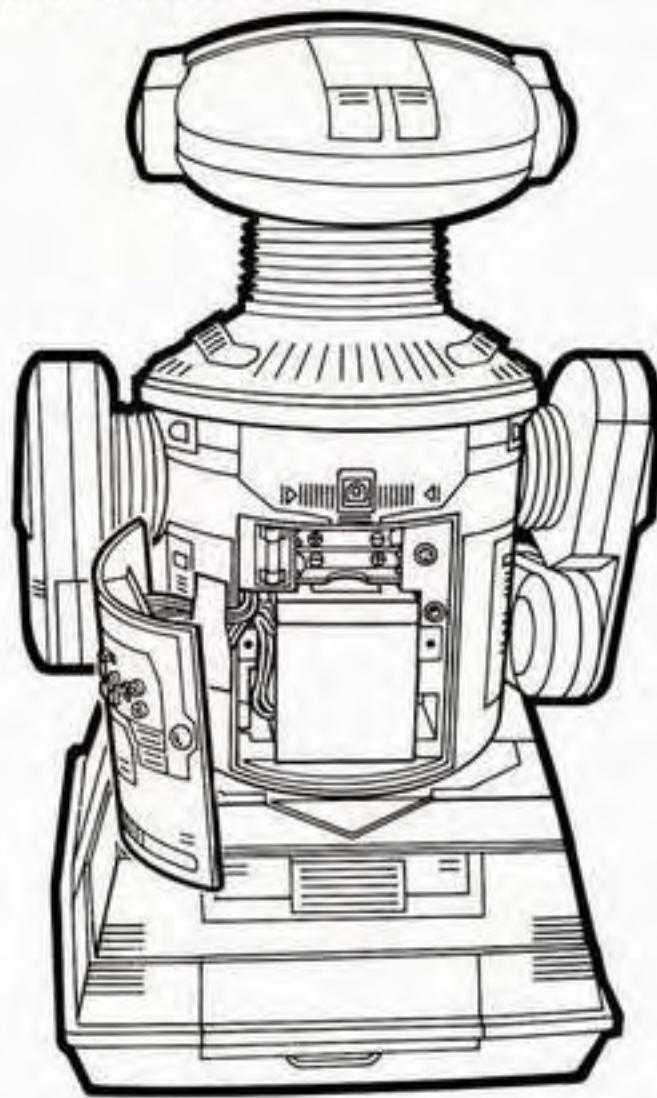

BATTERIES & FUSE (CONT'D)

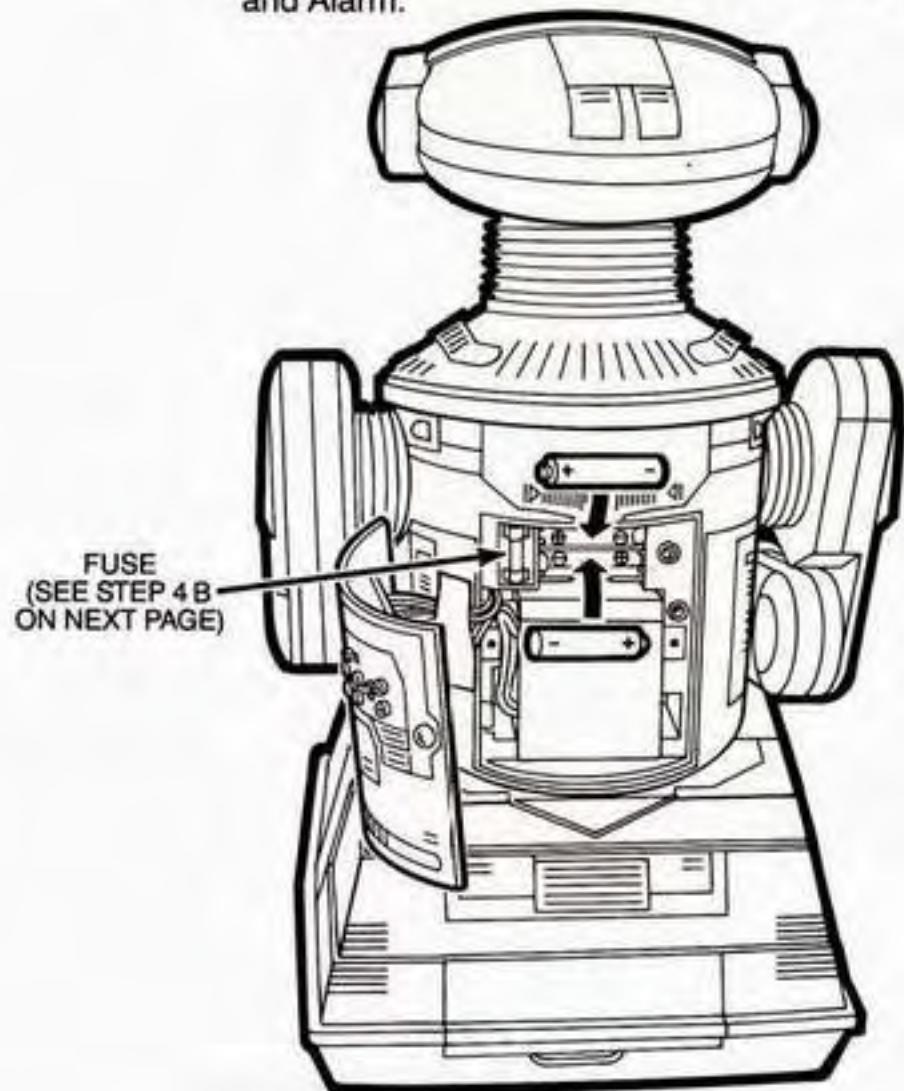

2. A) Carefully and slowly remove the rechargeable battery.
B) Connect the Battery Plug securely into the jack.

3. Carefully replace the rechargeable battery making sure to place the wires as shown.

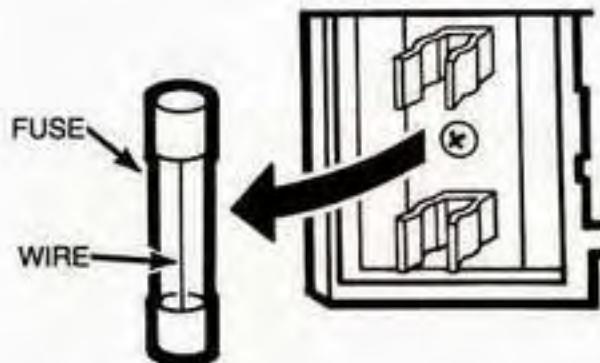

4. A) Insert 2 "AA" Alkaline Batteries (not included) as shown. These are the batteries that run the Clock and Alarm.

BATTERIES & FUSE (CONT'D)

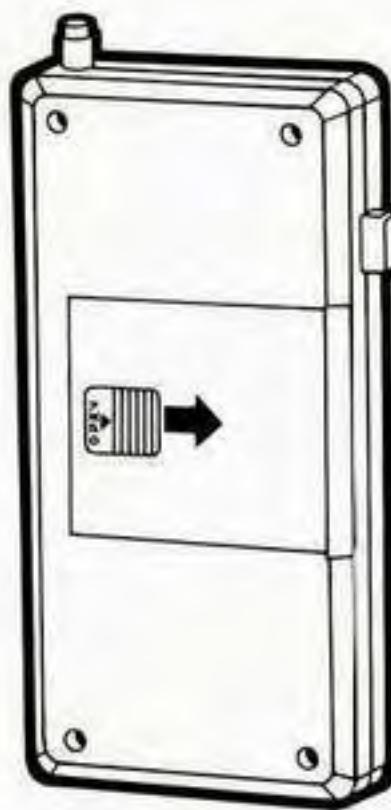

- B) At this time, make sure the fuse is okay. Simply snap it out and inspect the wire inside the fuse. If the wire is broken, then the fuse needs to be replaced. Use a 6 Volt 5 Amp fuse.

6. Remove the battery compartment cover on the back of the Master Control Unit.

BACK OF MASTER CONTROL UNIT

APPLY SLIGHT PRESSURE WHILE SLIDING

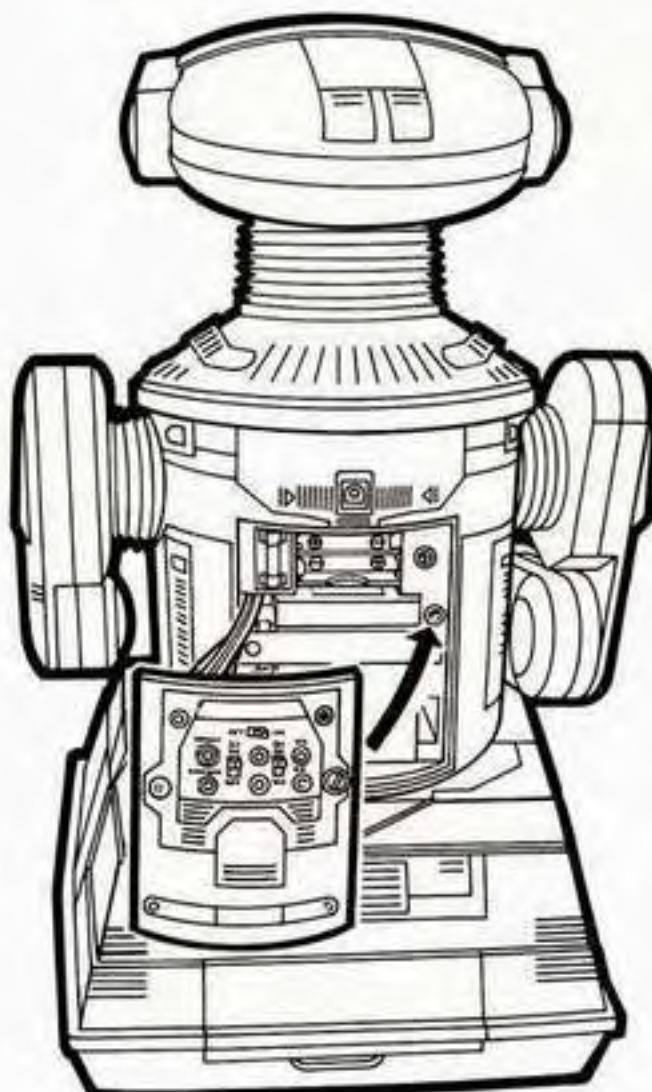

5. A) Carefully replace the Metal Bracket and screw in the 2 Bracket screws.

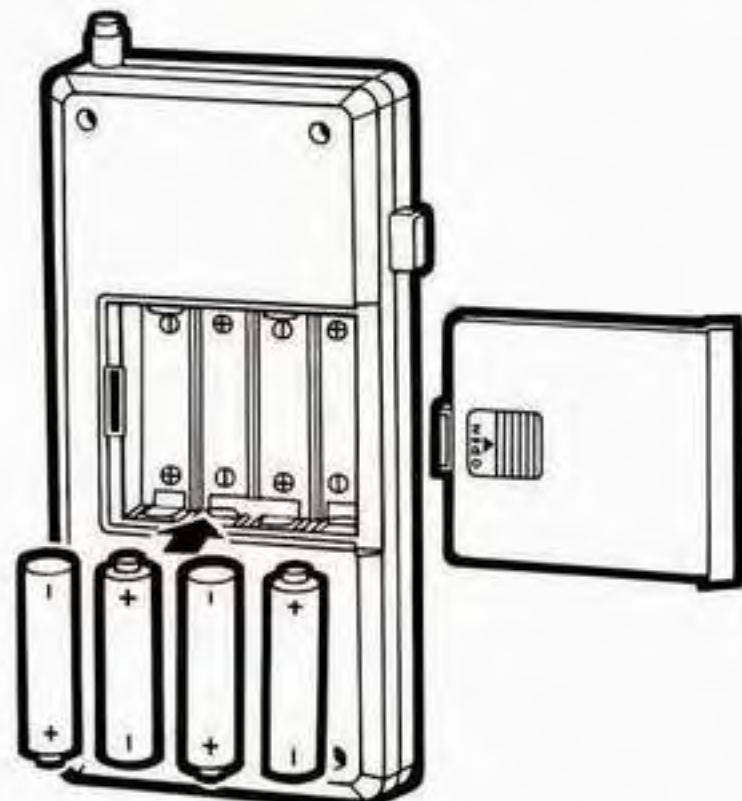

NOTE: If you taped the bundle of wires on the side of Omnidot, CAREFULLY remove it.

- B) Replace the battery compartment door and use your screwdriver or a coin to replace the metallic Door screw securely. Do not over tighten.

NOTE: Be careful not to crimp wires when replacing Door.

7. A) Insert the 4 "AA" Alkaline Batteries as illustrated.
B) Replace the battery compartment cover.

III. CHARGING THE BATTERY

The battery will require charging for 12-16 hours before using it for the first time.

WARNING: NEVER OPERATE OMNIBOT WHILE CHARGER IS CONNECTED TO BODY PLUG.

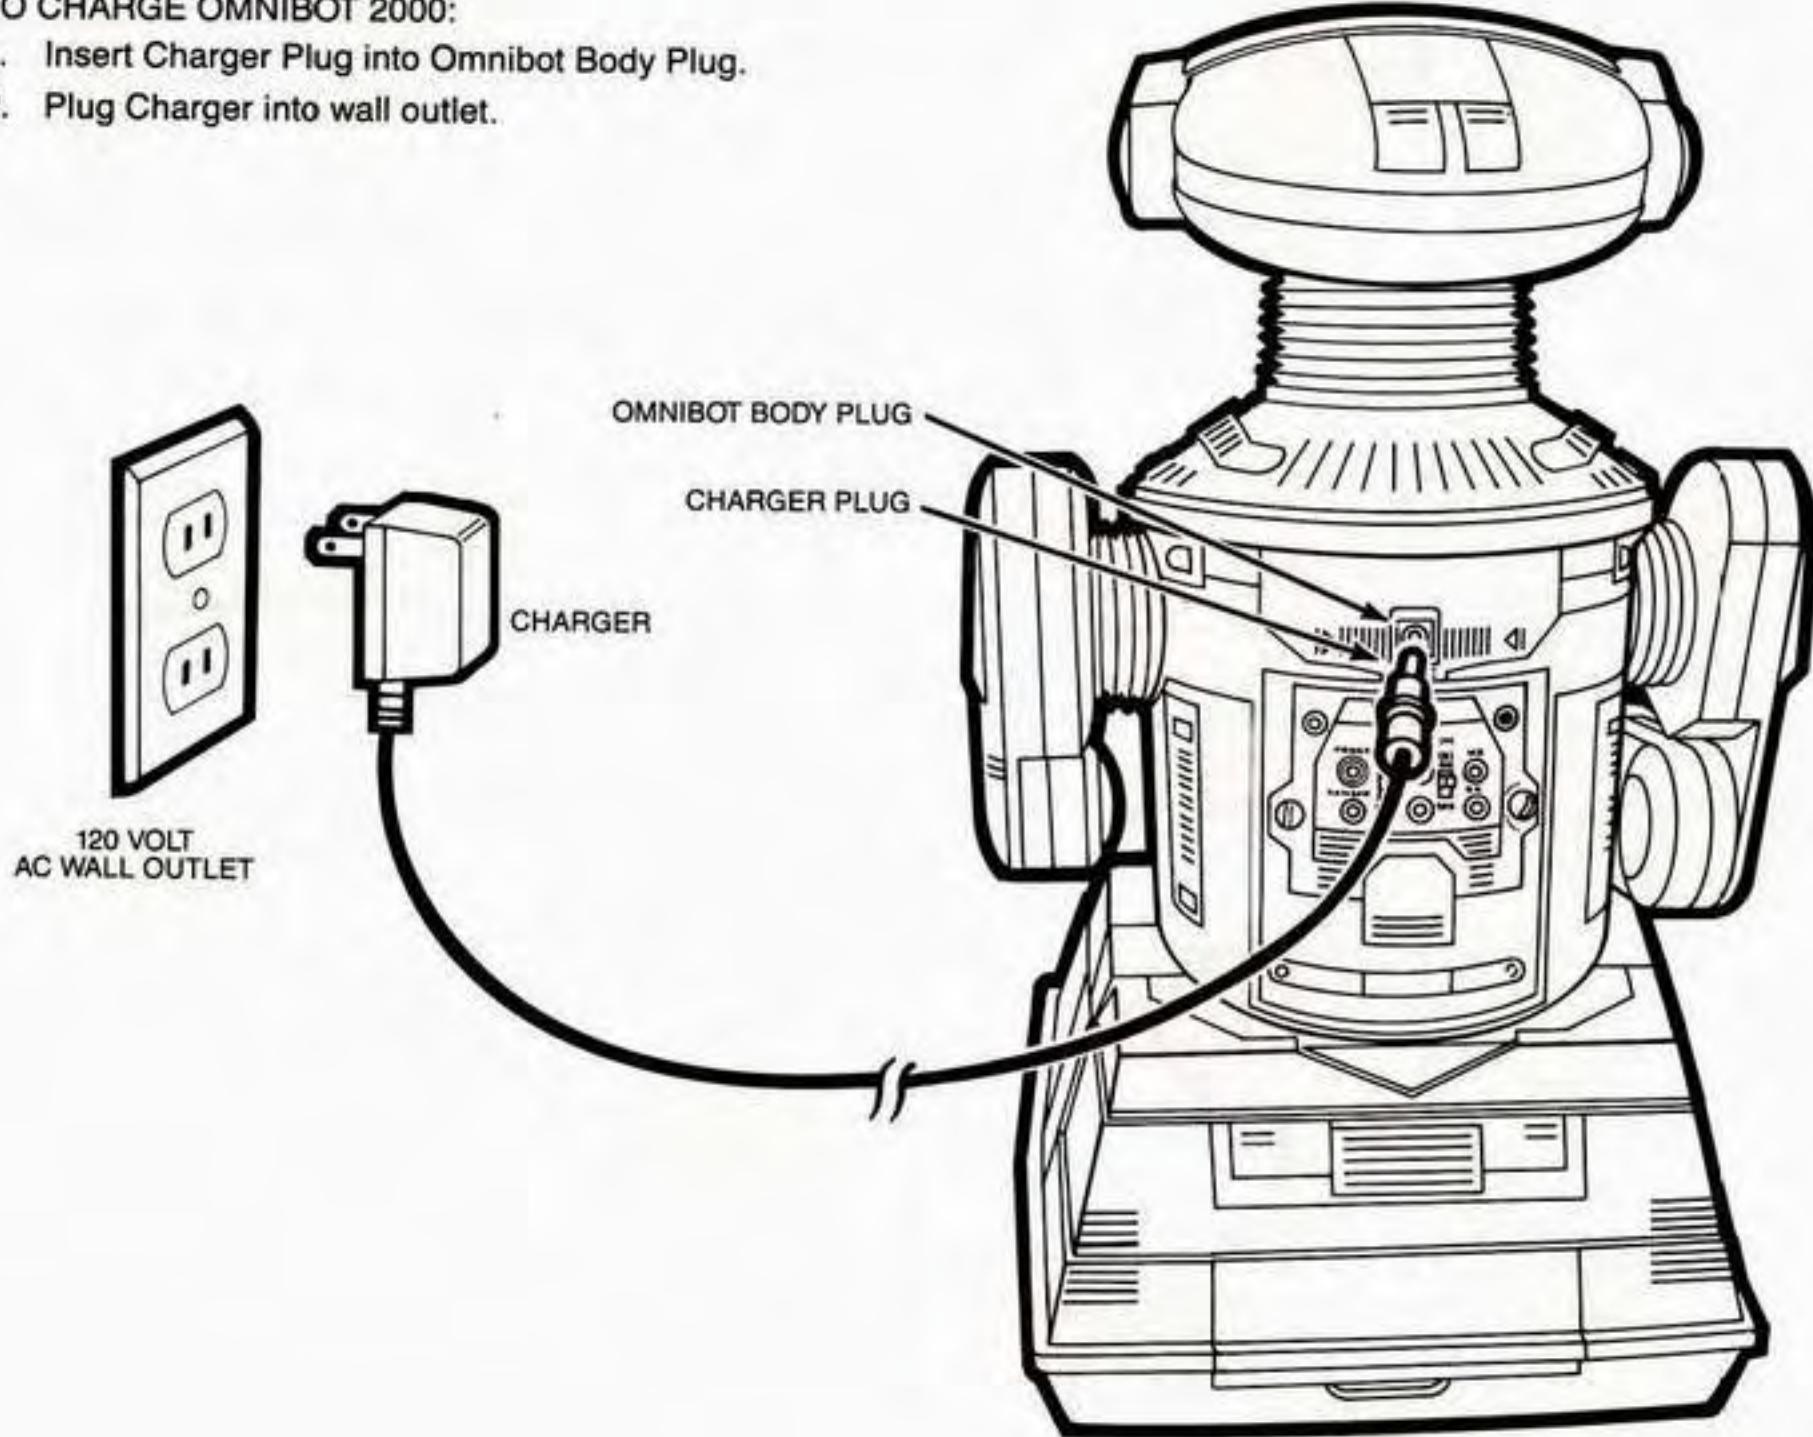

NOTE: MAKE SURE THE ON/OFF TIMER POWER SWITCH (SEE ILLUSTRATION ON PAGE 4) IS IN THE "OFF" POSITION.

FULL CHARGING TAKES 12-16 HOURS. USE CHARGER INDOORS ONLY.

THE GOLDEN RULE: ALWAYS RECHARGE AFTER EVERY USE AND WHEN OMNIBOT 2000 BEGINS TO SLOW DOWN. BATTERY SHOULD BE CHARGED BY ADULTS ONLY.

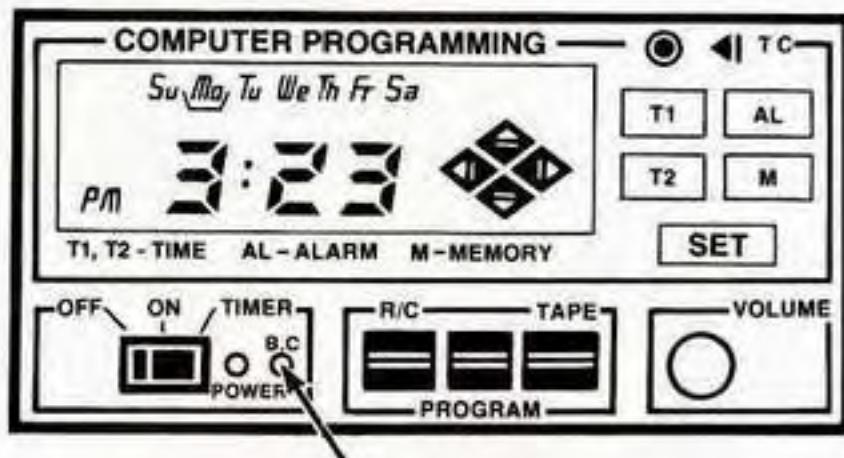

TO CHARGE OMNIBOT 2000:

1. Insert Charger Plug into Omnidot Body Plug.
2. Plug Charger into wall outlet.

CHARGING THE BATTERY (CONT'D)

IF THE RED LIGHT (MARKED BC "BATTERY CHARGE" LOCATED BY THE POWER SWITCH) TURNS ON, OMNIBOT MUST BE CHARGED RIGHT AWAY.
(see illustration)

WARNING:

Running Omnidot continually without recharging will severely shorten battery life. Use on steep inclines, and shag or pile carpets will require more frequent charging. It is therefore, highly recommended that you use Omnidot on hard, level surfaces. Always recharge after use.

Never recharge for more than 48 hours (overcharging will result).

The Tomy Charger included is specifically designed for the Omnidot. Do not use any other charging unit. Never pull on wires, pull on plugs only.

CHECKPOINTS:

If your Omnidot does not work after a full recharge (16 hours), check to make sure wall outlet works. Also check to make sure:

- 1) The Battery Plug is securely connected into the Jack.

- 2) The Fuse is okay. (See Batteries & Fuse Section)

If Omnidot still doesn't work, it is possible that you may have drained the battery dead. But don't panic—you can order a new battery (see Consumer Price List & Order Form).

STORING OMNIDOT:

If you plan to store your Omnidot, MAKE SURE YOU RECHARGE IT! A full recharge without use will keep the battery safely charged for up to six months.

NOTE: AFTER RECHARGING, AND BEFORE STORING OMNIDOT AWAY, unplug the rechargeable battery and take out the 6 "AA" Alkaline batteries. This will prevent possible battery leakage and damage to Omnidot.

When taking out of storage, recharge again before use.

Charger (Technical Specifications):

Input 120 Volt A.C. 60 HZ 10W

Output 6 Volt D.C. 300 mA

WHILE THE BATTERY IS CHARGING, THIS WOULD BE A GOOD TIME TO LEARN HOW TO PROGRAM OMNIDOT, SECTIONS IV (TIME OF DAY) AND V (ALARM PROGRAMMING).

PARENTS PLEASE NOTE:

PERIODICALLY EXAMINE CHARGER HOUSING AND CORD TO DETERMINE IF ANY DAMAGE HAS OCCURRED OR HAZARD EXISTS. ANY CONDITION SHOULD BE CORRECTED IMMEDIATELY BEFORE USE. THE CHARGER SHOULD BE SAFELY STORED AWAY WHEN NOT IN USE AS WITH ALL ELECTRICAL APPARATUS. IT SHOULD NOT BE DROPPED OR ABUSED.

IV. TIME OF DAY

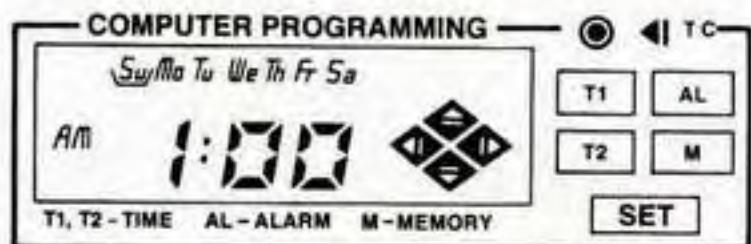

NOTE: IF YOU MAKE AN ERROR IN PROGRAMMING:

You can start over by removing and re-setting one of the two "AA" Alkaline batteries in Omnidbot's rear battery compartment. This erases everything you have programmed and allows you to start from the beginning again.

TIME OF DAY

The first phase of programming Omnidbot's digital time/ alarm display is learning how to set and change the Time of Day.

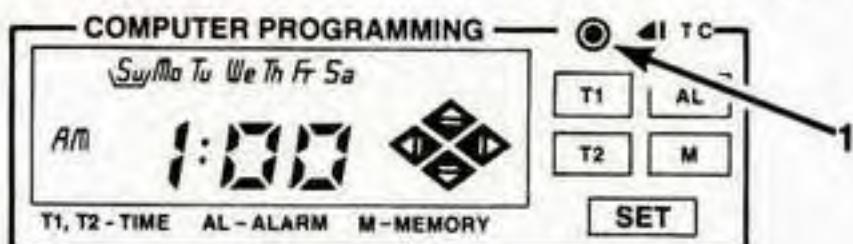

Note: When Omnidbot's clock/alarm batteries are first hooked up, the screen will briefly flash all its symbols—before this appears on the screen:

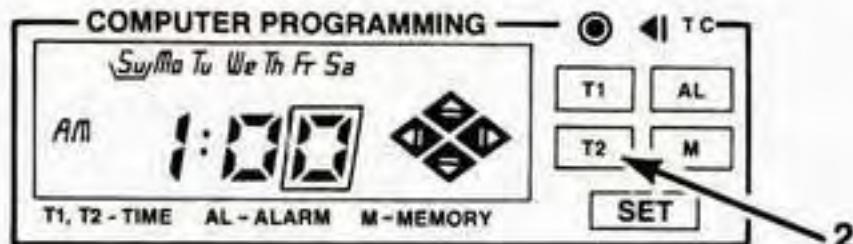

Example: Let's say the time is 3:22 pm Monday. We will set the time to 3:23 pm Monday. This allows us a minute to set the time to the exact second.

- Push TC (time clear).

NOTE: You may have to use the point of a pencil, pen, or paper clip.

- Change the blinking digit (to 3) by pushing T2.

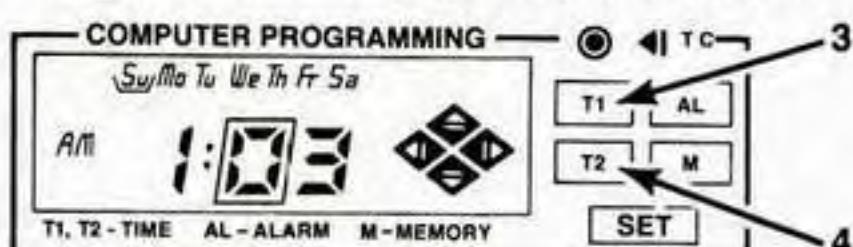

NOTE:

- A) Push once for each digit change.
- B) Hold button down for rapid digit change.
- C) Digits change in proper sequence and then repeat.

- Push T1.

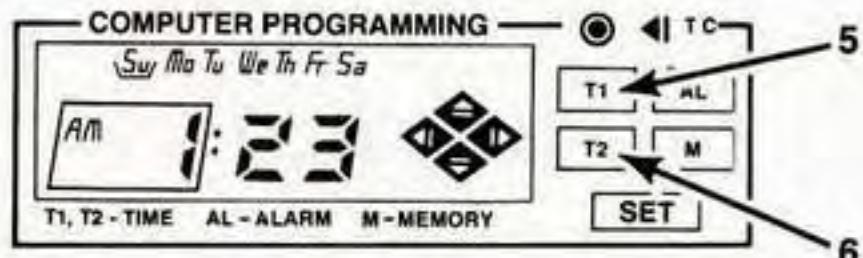

- Change the next blinking digit (to 2) by pushing T2.

- Push T1.

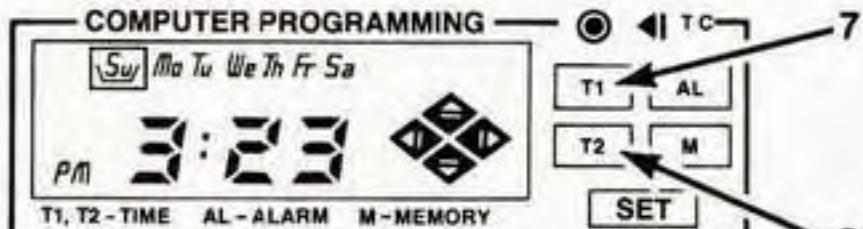

- Change the blinking hour and am/pm by pushing T2.

Note: To get from 1:00 am to 3:00 pm you must go 1-12 am, and then 1-3 pm, stopping at 3 pm.

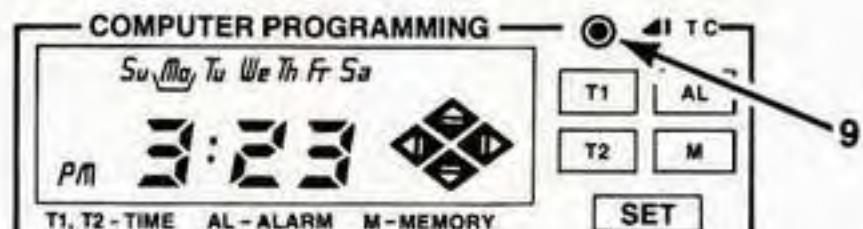

- Push T1.

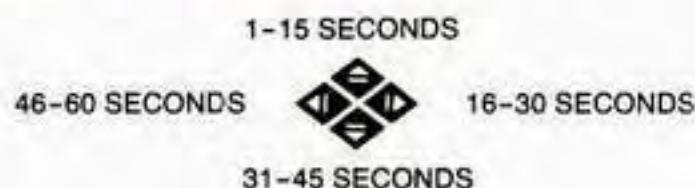

- Change the line under the day of the week (to Monday, in this case) by pushing T2.

- When you have finished programming, PUSH TC to lock in the Time of Day. (To get your time to the exact second: wait until the minute changes on your own watch or clock and then push TC on Omnidbot.)

Note: The seconds are indicated on the right side of the screen by the flashing diamond shapes. They only appear when the Time of Day is on the screen. If you are in Alarm storage or Memory (AL or M) they will not be on the screen.

SUMMARY

TC = Time Clear. This is used for changing and setting the time of day only.

T1 = Moves the "flashing" to the next digit/day.

T2 = Changes the individual digit/day.

V. ALARM PROGRAMMING

NOTE: IF YOU MAKE AN ERROR IN PROGRAMMING:

You can start over by removing and re-setting one of the two "AA" Alkaline batteries in Omnibot's rear battery compartment. This erases everything you have programmed and allows you to start from the beginning again.

IF YOU HAVE ANY QUESTIONS, call toll free number for assistance:

(800) 421-5597 FOR OUTSIDE CALIFORNIA

(800) 421-8496 FOR CALIFORNIA RESIDENTS

Omnibot's Alarm System features the following:

- 1) Three distinct alarm sounds.
We will call these AL-1, AL-2, and AL-3.
- 2) An alarm mechanism that allows you to start and stop the cassette unit at a pre-programmed time. We will call this CL (Cassette Lock).
NOTE: We will discuss and illustrate this feature in the Cassette Programming section.
- 3) A memory with 7 Alarm Storages. Omnibot's memory will allow you to program and store up to 7 different alarm settings at once. We will call these storage 1, storage 2, etc. thru storage 7.

TO SET THE ALARMS (AL-1, AL-2, AL-3):

EXAMPLE: Let's set the alarm to go off at 4:35 pm Tuesday and choose AL-3 to be the desired alarm sound.

1. Push AL

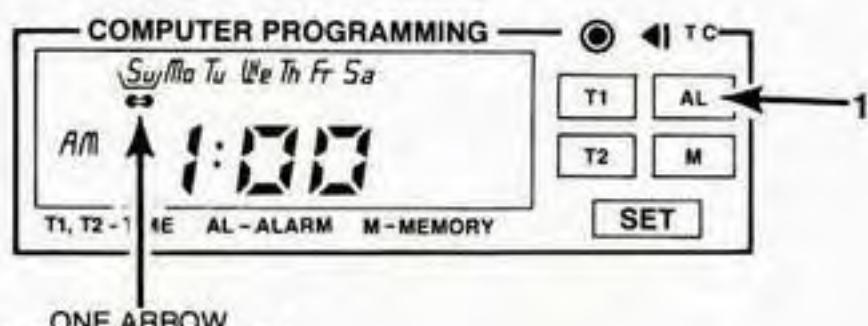

A time will now appear on the screen.

This is the first alarm storage.

Storage 1 is indicated by the one arrow under Sunday.

NOTE: The number of arrows indicate the Storage # you are in. Arrows under Sunday and Monday would indicate Storage 2; arrows under Sunday, Monday and Tuesday = Storage 3, etc. thru 7 arrows = Storage 7.

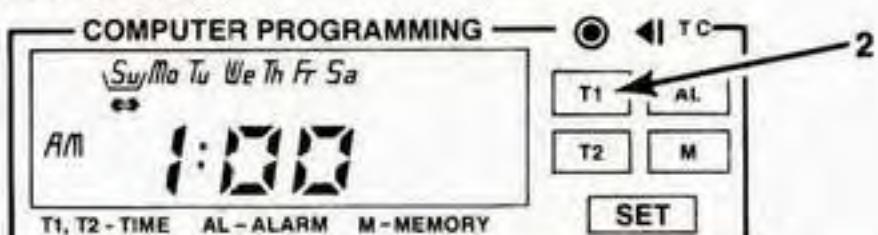

If a time has not been programmed into Storage 1, the screen will flash the following:

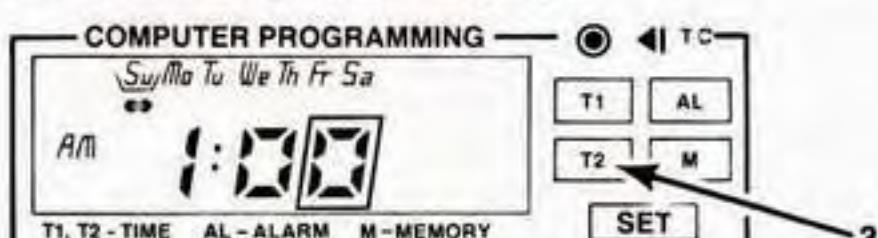

NOTE: If a time has been programmed into Storage 1 that time will appear on the screen and it will not flash.

2. Push T1

Storage setting 1 will flash its far right digit so you can change it.

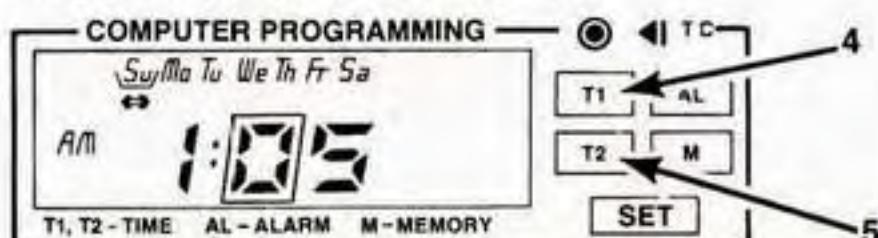

3. Push T2 to change the flashing digit.

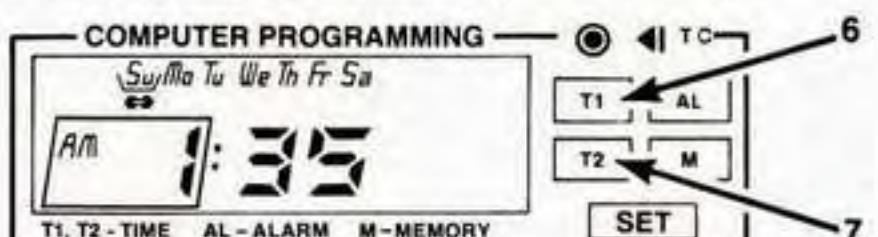

4. Push T1.

5. Push T2 to change the flashing digit.

6. Push T1.

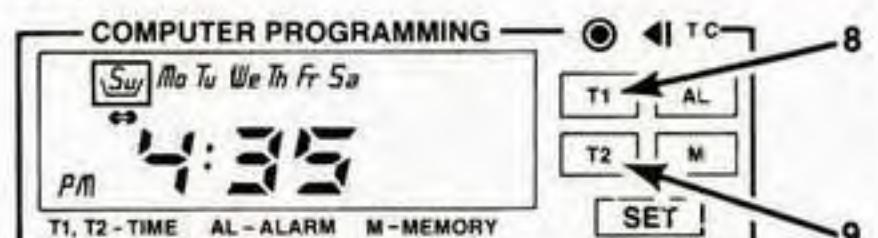

7. Push T2 to change the flashing hour and am/pm.

8. Push T1.

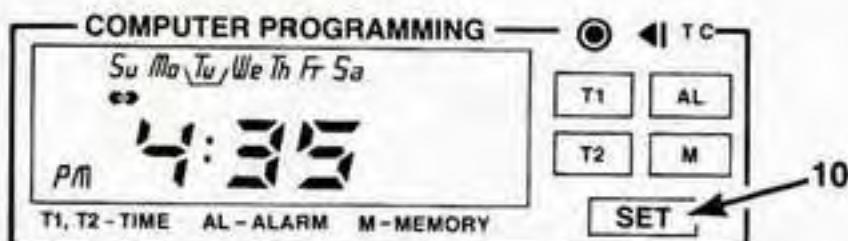

9. Push T2 to change the line under the day of the week.

You can select between having the alarm set on any one day or the full week. To select the full week, push T2 past Saturday. The lines will then flash under all seven days.

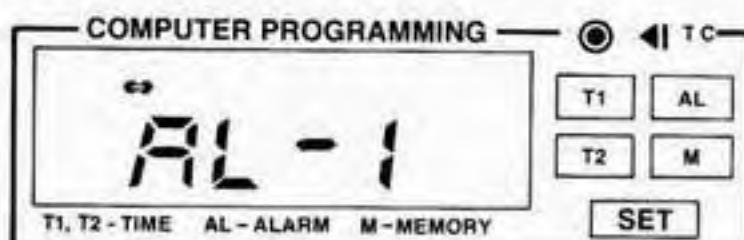

ALARM PROGRAMMING (CONT'D)

10. Push SET when the correct alarm time and day are programmed. (The alarm time and day will disappear from the screen and will automatically be stored in Omnibot's memory.)

If an alarm setting has not been programmed into storage 1 the screen will now flash the following:

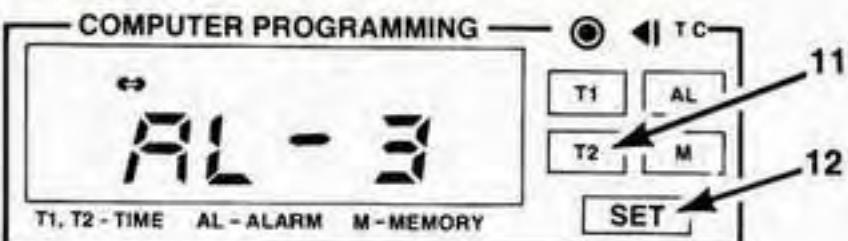

NOTE: If an alarm setting has already been programmed previously, that alarm setting will appear on the screen.

PUSHING T2 ALLOWS YOU TO SELECT BETWEEN THE ALARM SOUNDS (AL-1, AL-2, OR AL-3) AND CL FOR CASSETTE PROGRAMMING.

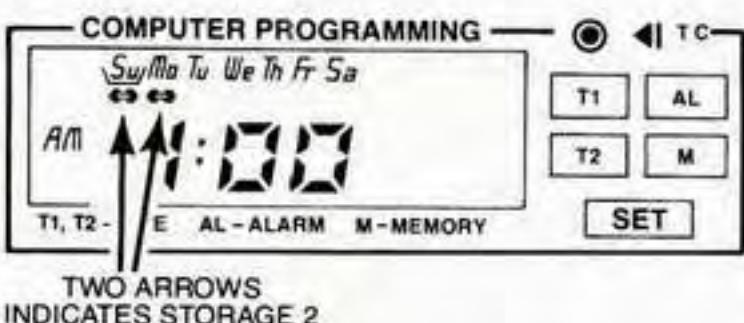

(This is the point where you would select CL for programming the cassette to start and stop. We will discuss this option later in the CASSETTE PROGRAMMING section. For our example, let's use AL-3.)

11. Push T2 to select which of the three alarm sounds you desire. (in this case, AL-3)
12. Push SET. (AL-3 will disappear from the screen and automatically be stored in Omnibot's memory.)

Storage 2 will now appear on the screen.

If a time has not been programmed into storage 2, the screen will **flash the far right digit of 1:00 am Sunday**.

NOTE: If a time has been programmed into storage 2, that time will appear on the screen.

You will know you are in Storage 2 by the arrows now appearing under Sunday and Monday. (2 arrows = storage 2, 3 arrows = storage 3, etc. thru 7 arrows = storage 7)

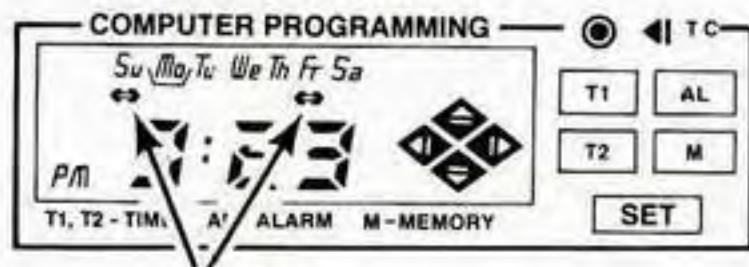

AT THIS TIME YOU CAN:

(PLEASE READ ALL YOUR OPTIONS: A, B and C BEFORE DECIDING WHAT TO DO.)

A) RETURN TO THE TIME OF DAY

To do this, simply push AL.

NOTE: In AL, the arrows under the days of the week tell you what storage you are in. However, when you return to the Time of Day, THE ARROWS NOW INDICATE WHAT DAYS OF THE WEEK YOU HAVE ALARMS PROGRAMMED TO GO OFF.

The one exception is that if you program an alarm storage for a whole week (instead of one day) (see step 9) arrows will not show up for this program.

B) PROGRAM STORAGE 2 LIKE YOU DID STORAGE 1

NOTE: If you try to program the same time and day into more than one alarm storage, Omnibot will reject it. He will blink and flash a 1:00 am at you, and give you a "reject sound."

C) SKIP STORAGE 2 (ALTHOUGH IN THIS CASE, YOU MAY NOT)

When you enter Alarm Storage (by pushing AL), the SET button acts as a skip button to the next storage.

- 1) If there is nothing programmed in the storage (1:00 am Sunday, flashing), push the SET button **ONCE** to get to the next storage.

**AL → Storage 1 Time, Day →
Storage 2 Time, Day →
Storage 3 Time, Day →
Storage 4 Time, Day → etc.**

(continued)

ALARM PROGRAMMING (CONT'D)

- 2) If there is a program already in the storage, you will need to push the SET button **TWICE** to get to the next storage.—The first time you push the SET button will tell you which alarm you have programmed for that particular storage.

AL → Storage 1 Time, Day →
Storage 1 Alarm Choice →
Storage 2 Time, Day →
Storage 2 Alarm Choice →
Storage 3 Alarm Choice → etc.

HOWEVER, AS SOON AS YOU PROGRAM ONE OF THE ALARM STORAGES, YOU MAY NO LONGER SKIP OVER UNPROGRAMMED STORAGES (1:00 am SUNDAY, FLASHING).

The reason for this is that the SET button becomes a **Program** button as soon as you program an alarm storage. And when you attempt to skip over an unprogrammed storage (1:00 am Sunday, flashing) it automatically programs and sets that storage for 1:00 am Sunday (the flashing will stop when this happens).

If you skip another unprogrammed storage in this manner—Omnibot will give you the "reject sound." Why? Because you have tried to program 2 storages to go off at the same time and day (1:00 am Sunday).

THE RULE

ONCE YOU HAVE PROGRAMMED AN ALARM STORAGE, YOU MAY NO LONGER SKIP OVER UNPROGRAMMED STORAGES—YOU WILL HAVE TO EXIT ALARM STORAGE (BY PUSHING AL) AND RE-ENTER ALARM STORAGE (BY PUSHING AL AGAIN).—THEN YOUR SET BUTTON WILL ACT AS A SKIP BUTTON AGAIN.

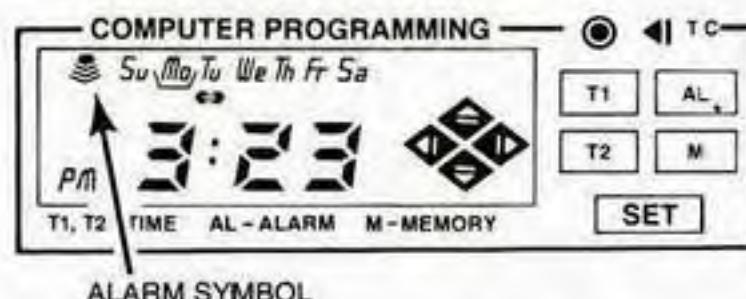

WHEN YOU ARE FINISHED PROGRAMMING:

13. Push AL to return to the Time of Day.
14. Push T1 to set the alarm.

The screen will now show the Time of Day (in this case, 3:23 pm Monday). The alarm time is no longer displayed—it is stored in Omnibot's memory.

AL-3 is now set to go off at 4:35 pm Tuesday. This should be indicated by the alarm symbol in the upper left corner of the screen. The arrow under Tuesday tells you that the alarm is set for Tuesday.

ALARM SYMBOL

If the alarm symbol does not appear on the screen, push T1 and it should then appear.

NOTE: When times are programmed into alarm storage, T1 becomes an alarm on and off button. When the alarm symbol appears on the screen, all the alarms in your storage are set to go off. When the alarm symbol does not appear on the screen, none of your alarms in storage will go off.

15. ALARM SHUT OFF

To shut off the alarm once it sounds—push SET. If you do not shut it off manually, the alarm will continue for 4 minutes—before shutting off automatically.

16. TO ERASE AN ALARM

- A) Push AL to get into Alarm Storage.
- B) Push SET to get to the storage you want to erase.
- C) First, push M. Then while holding M down, push SET at the same time. The display will now show 1:00 am Sunday, flashing.—Your alarm is erased.
- D) Push AL to leave Alarm Storage.

SUMMARY

- AL = Alarm Storage. This is used for entering and leaving the Alarm Storage.
- T1 = Moves the "flashing" to the next digit/day—when in Alarm Storage.
Becomes an Alarm On/Off button—when out of Alarm Storage.
- T2 = Changes the individual digit/day.
- SET = When in Alarm Storage:
Sets the alarm time and day. Also sets your choice of alarms (AL-1, AL-2, or AL-3). Can also be used to skip from one alarm storage to another.
When out of Alarm Storage:
Shuts off the alarm sound when the alarm is running.
- SET + M = To erase an alarm. (First push M. Then while holding M down, push SET at the same time.)

ALARM PROGRAMMING (CONT'D)

ALARM STORAGE MEMORY BUTTON

To check the times and alarms pre-programmed in the 7-storage memory:

- Push M (memory) button.

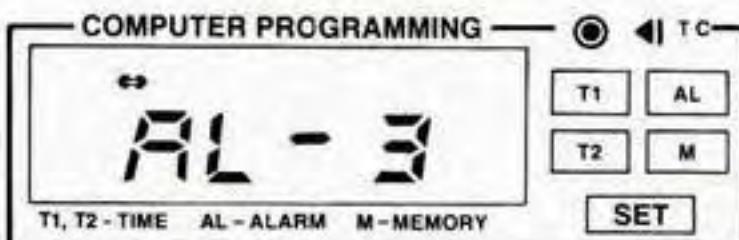

This shows the storage 1 setting.

NOTE: The arrow under Sunday indicates you are in Storage 1.

(In this example storage 1 is programmed to go off at 4:35 pm, Tuesday.)

- Push T2 to check which alarm is set to go off.

(In this example the programmed alarm in storage 1 is AL-3.)

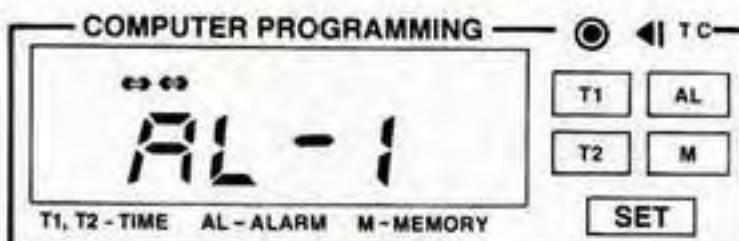

- Push T1 to advance to storage 2.

NOTE: The arrows under the days of the week now indicate you are in storage 2.

(In this example storage 2 is programmed to go off at 6:00 pm, Wednesday.)

- Push T2 to check which alarm is set to go off.

(In this example the programmed alarm in storage 2 is AL-1.)

- Push T1 again.

NOTE: The arrows under the first three days of the week now indicate you are in storage 3.

(In this example storage 3 is programmed to go off at 8:00 am, Friday.)

- Follow this action (T1, T2) to check all seven storage settings.

If a storage setting has been programmed: 1:00 am Sunday will flash on the screen to indicate the storage setting is empty. Also, the screen will not change when you push T2.

At any time you can push M again to return to the Time of Day.

You cannot reset or program a time while in M.

M is for checking the memory only.

SUMMARY

M = Memory. This is used for entering and leaving Omnibot's Memory.

T1 = Moves to the next storage.

T2 = Checks which alarm is set to go off.

NOTE: MAKE SURE YOU ALWAYS RESTORE THE DIGITAL CLOCK TO ITS NORMAL CONDITION (FOUR FLASHING DIAMONDS) WHEN YOU ARE FINISHED PROGRAMMING. IF THE FOUR DIAMONDS ARE NOT FLASHING, PRESS TC, AL, OR M. THIS IS VERY IMPORTANT. OMNIBOT WILL NOT WORK IN HIS DIFFERENT MODES UNLESS THE DIAMONDS APPEAR (AND ARE FLASHING).

VI. BASIC CASSETTE OPERATION

Omnibot has a built in cassette deck. It plays standard tapes (blank and pre-recorded). The do's and don'ts of this section will help you protect and care for Omnibot and your tapes.

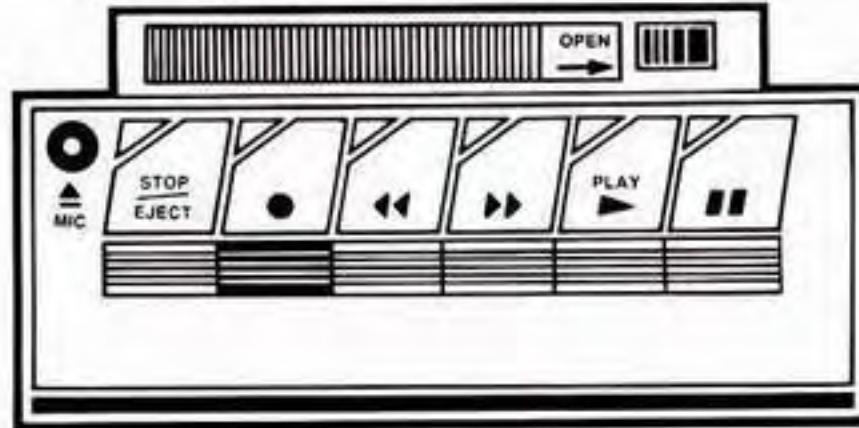

WARNING: BECAUSE THE CASSETTE UNIT IS BUILT INTO OMNIBOT, EXTREME CAUTION MUST BE OBSERVED. BE CAREFUL AND GENTLE AT ALL TIMES WITH ALL CASSETTE FEATURES. DO NOT USE FORCE OR DAMAGE MAY OCCUR.

To ensure safe and long lasting care of your Cassette Unit:

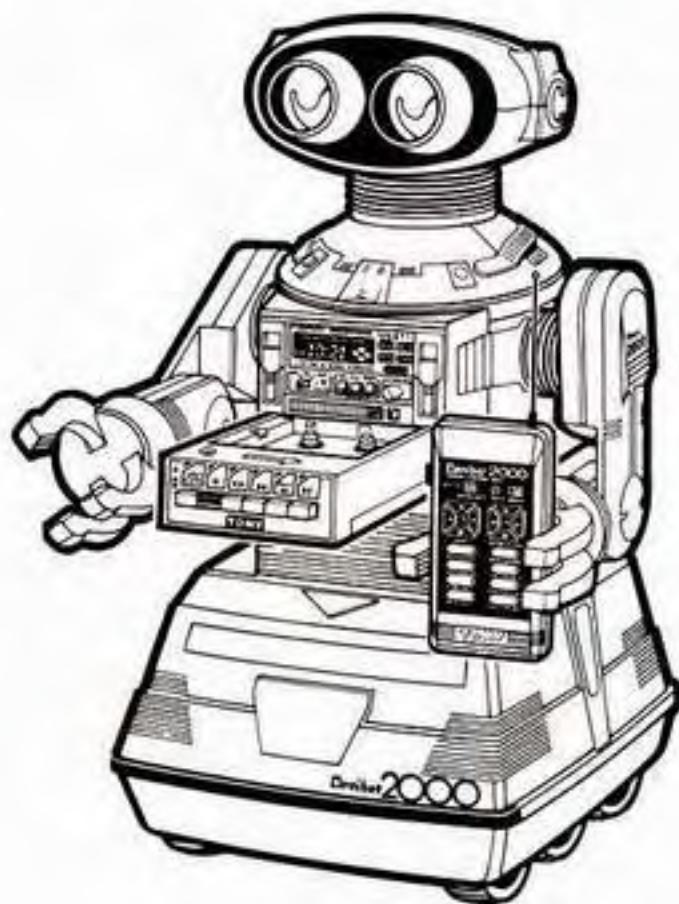

- A. Do not use metal tapes. Use normal bias tapes.
- B. Do not use tapes longer than sixty minutes (C-60). We recommend C-30's or shorter.

To insert a cassette:

1. Cassette Unit should be off (no buttons pressed in). If any button is pressed in, press STOP/EJECT button until it snaps out.
2. Slide OPEN lever to the right.

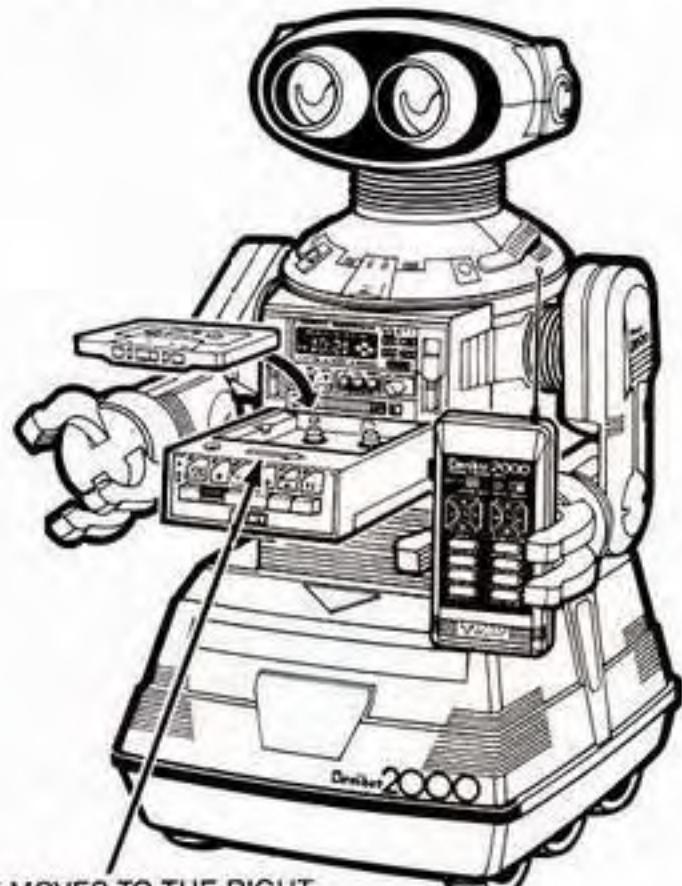

3. Gently pull Cassette Unit out like a drawer.

4. The exposed tape should be facing you, with the side you wish to play, facing up.

5. Place cassette into compartment, gently. Do not force, or damage may occur.

NOTE: To play or record on your tape make sure the side with the full reel of tape is to your left. If it is not, make sure to rewind it before pushing PLAY.

6. Push Cassette Unit back into Omnibot.

**WAIT UNTIL YOU READ
“MODE SELECTOR-TAPE” SECTION
TO OPERATE CASSETTE UNIT.**

You will need additional information in order to make the Cassette Unit work.

BASIC CASSETTE OPERATION (CONT'D)

To remove cassette:

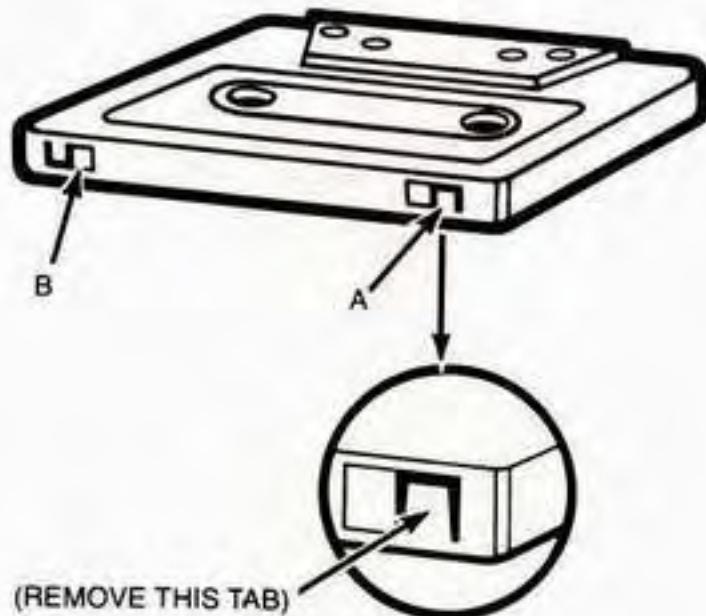

1. Cassette Unit should be off (no buttons pressed in).
2. Slide OPEN lever to the right.
3. Pull Cassette Unit towards you until you can see the whole cassette.
4. Push the EJECT button.
5. Remove cassette and push Cassette Unit back into Omnidot.

If you want to record something else on the cassette, stick a piece of cellophane tape back where the tab was.

AS AN ADDITIONAL FEATURE, OMNIBOT'S FLASHING EYES ARE STROBE-SYNCHRONIZED TO THE SOUND LEVEL OF THE SPEAKER SYSTEM.

If you want to keep recordings on the cassette, snap off the little tab (on both A & B sides).

It is a copyright violation to use your recordings on your cassette other than for your own pleasure and personal use.

If the Cassette Unit is not working properly, check the following points:

RECORD BUTTON CANNOT BE PUSHED IN:

- Are you using a tape with the little tab snapped off?—Take out the cassette tape to check the tab. If it has been snapped off, stick a piece of cellophane tape where the tab belongs.

YOU CANNOT PUT IN A CASSETTE:

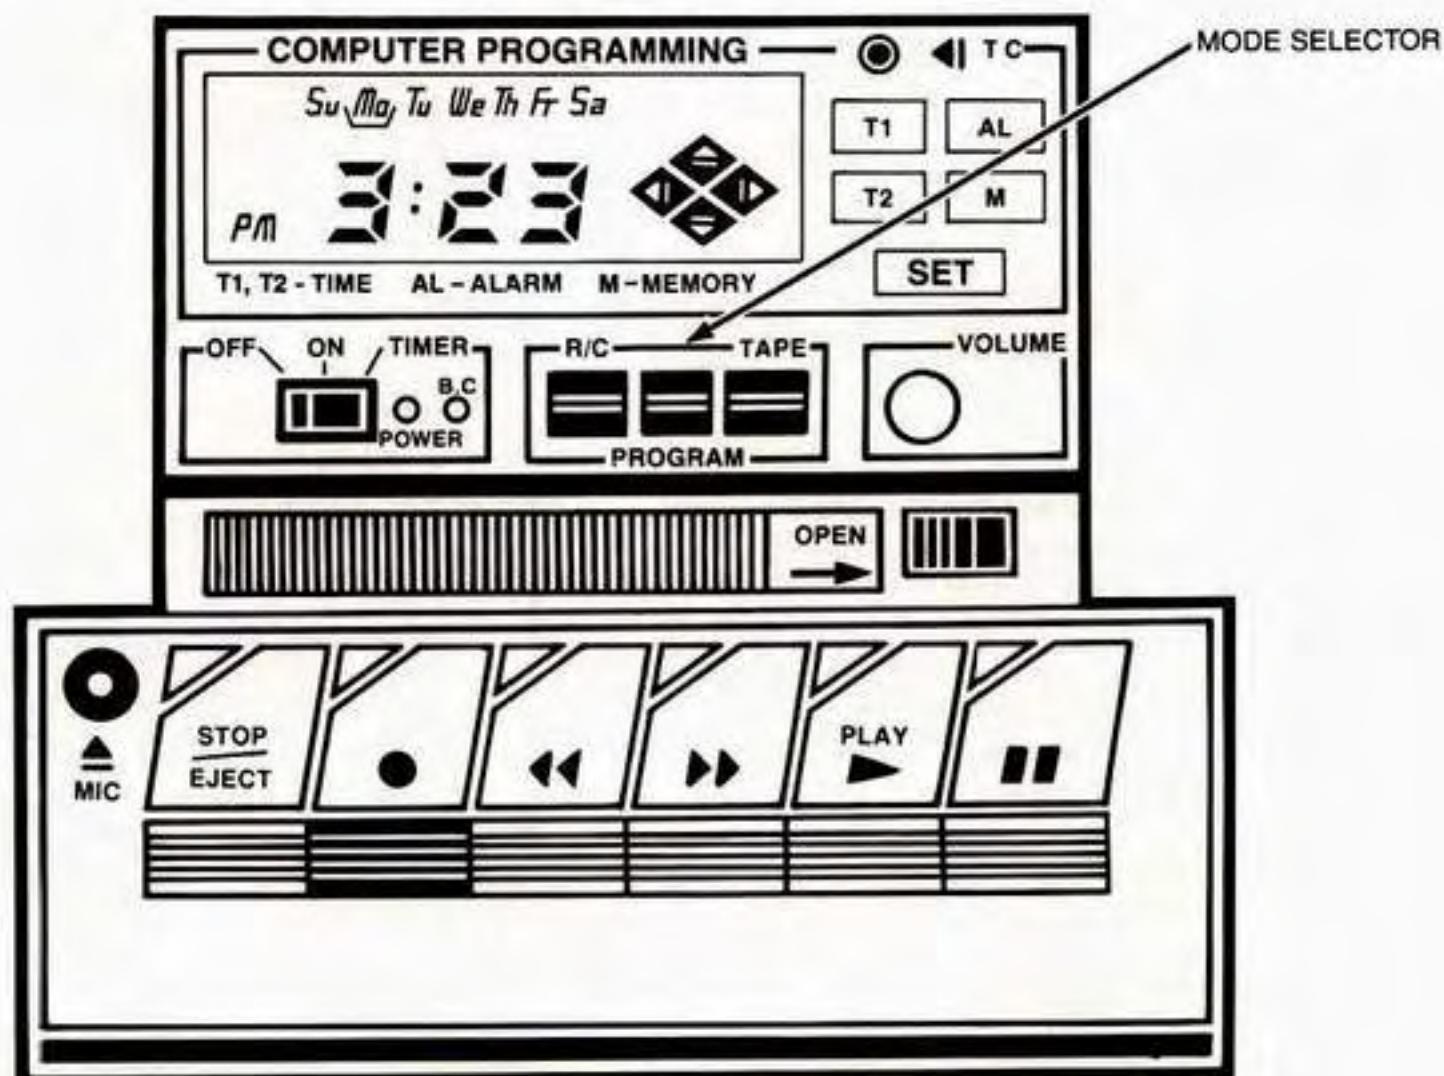

- Are you trying to put it in backwards? Place it with the tape facing toward you.
- Is PLAY button pushed in? First push STOP/EJECT button and then put the cassette tape in.
- Check to see if the cassette is damaged.

VII. MODES

There are three modes in which Omnidbot will operate. They are TAPE, PROGRAM, and R/C.

You will find the Mode Selector underneath the time display. (see illustration)

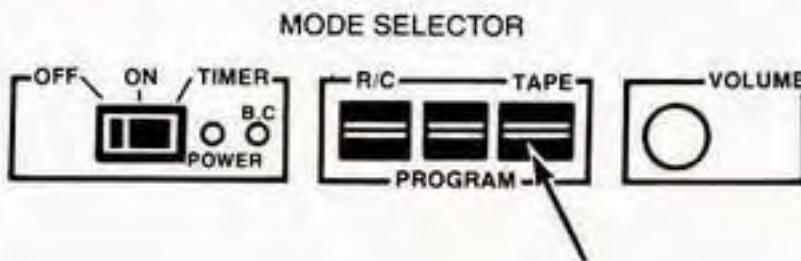

We will discuss these modes and their functions, one at a time, beginning with the TAPE mode.

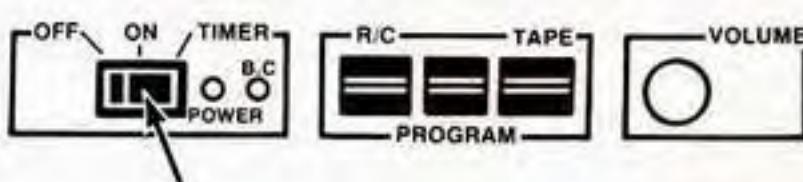

VIII. MODE SELECTOR-TAPE

At this time we will teach you to operate the Cassette Unit while it is in TAPE mode.

- To operate in TAPE mode, push TAPE button on the mode selector.

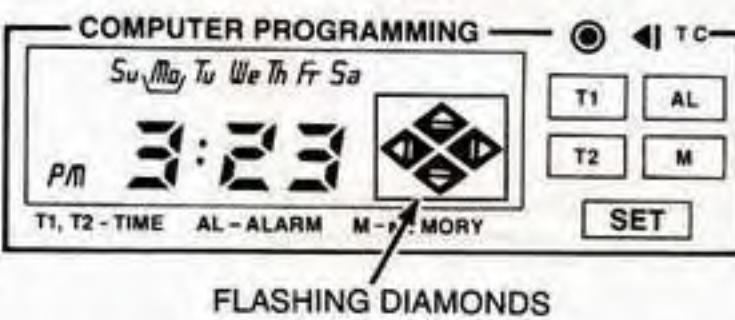

- To turn Omnibot's power on, switch the power switch to ON position.

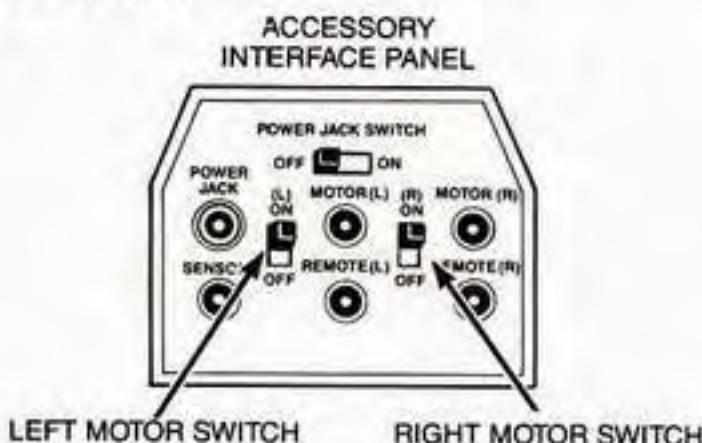

NOTE: Every time you turn Omnibot ON, his motorized hand, wrist, arm, and head will re-set to their original position. This is normal. Simply wait for him to re-set before operating him. You will hear a series of bleeps and Omnibot's eyes will flicker when he's ready to go!

If Omnibot does not bleep and his eyes do not flicker, check to make sure the diamonds on the digital clock are flashing. If they are not flashing, press TC, AL or M until the diamonds start flashing.

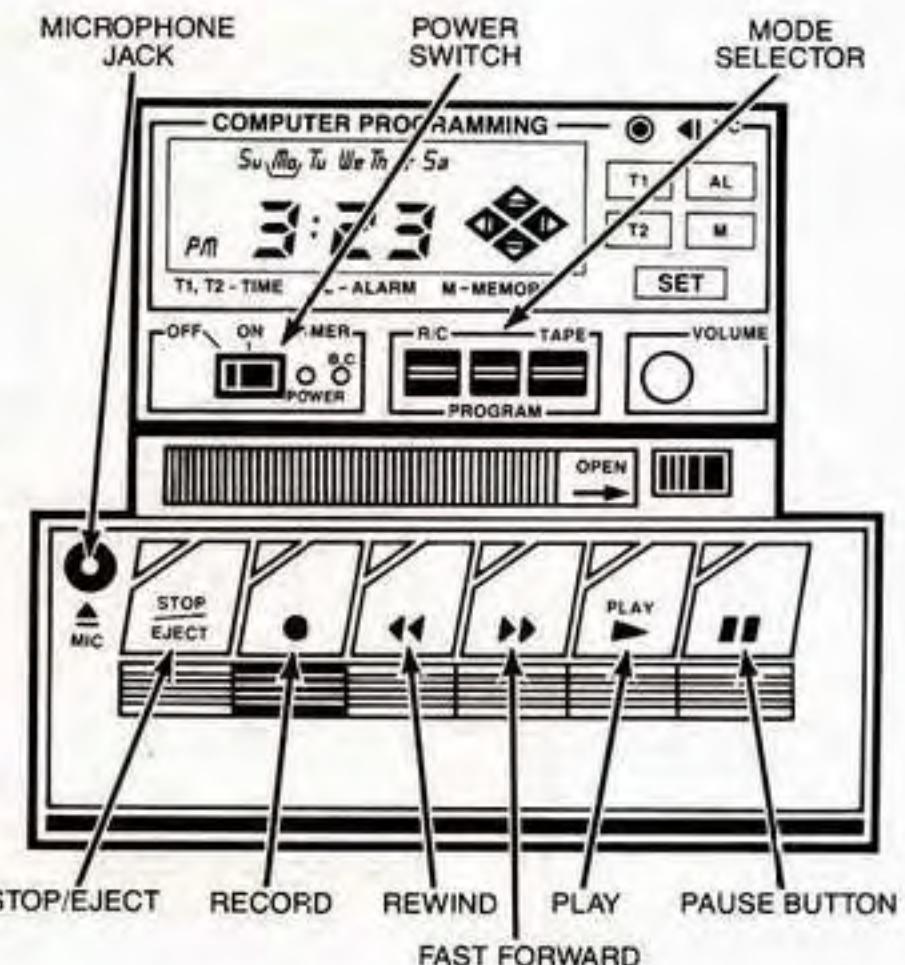

- Check the Accessory Interface Panel on Omnibot's back. **BOTH** the **LEFT** and **RIGHT** Motor Switches must be **ON**! If one of the Motor Switches is OFF, Omnibot will NOT FUNCTION! **THIS IS VERY IMPORTANT!**

- To play a tape, push the PLAY button.
- To stop, push STOP/EJECT button.

- Before you fast forward (►►) or rewind (◀◀), make sure to push STOP/EJECT button first or damage will result.

- To record:
 - Push the PAUSE button.
 - Push the RECORD button.
 - Simply release the PAUSE button when you are ready to begin recording.

You can record from a microphone or other source by plugging into the jack located on the Cassette Unit. (microphone specifications: See Technical Specifications section.)

NOTE: YOU CAN ALSO RECORD ONTO CASSETTE THROUGH YOUR MASTER CONTROL UNIT. WE WILL COVER THIS IN THE R/C AND PROGRAM MODE SECTIONS.

- To playback your recording: REWIND, STOP and then PLAY.
- To erase, new recordings will automatically erase the old ones. However, if tabs have been removed neither recording or erasing will be possible. Refer to section on BASIC CASSETTE OPERATION for keeping recordings on cassette.
- As an added feature, a microphone (not included) plugged into the microphone jack will project your voice through Omnibot's onboard speaker. (This will only work when you are not recording.) The volume level to this speaker is located on Omnibot.

SEE TAPE MODE CHART ON NEXT PAGE

MODE SELECTOR-TAPE (CONT'D)

IN TAPE MODE REVIEW

YOU CAN:	YOU CAN NOT:
<ol style="list-style-type: none">1. Operate the cassette unit's basic functions: PLAY, RECORD, FAST FORWARD, REWIND, STOP, PAUSE.2. Record onto cassette voice and/or music from a microphone (not included) or other source. Plug into the cassette unit jack (Located near the STOP/EJECT button.)3. Project your voice through Omnibot's onboard speaker with plug-in microphone (not included). Microphone plugs into jack located on Cassette Unit.	<ul style="list-style-type: none">• Operate Omnibot by his Master Control Unit. (The MCU works only in R/C Mode or when recording in PROGRAM Mode.)• Record onto cassette through the Master Control Unit microphone. (The MCU microphone works only in R/C or PROGRAM Mode.)• Have Omnibot obey movement programmed cassettes. He will only obey programs (movement signals) in PROGRAM Mode.

IX. MODE SELECTOR-R/C (REMOTE CONTROL)

Before you can operate Omnidbot by his Master Control Unit (MCU), you must first make the following adjustments on Omnidbot:

NOTE: Make sure the battery has been fully charged (12-16 hours).

1. Omnidbot Mode Selector Switch: R/C.

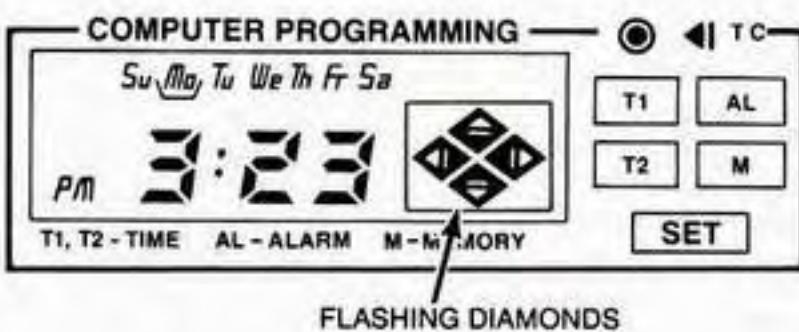

2. Omnidbot Power Switch: ON.

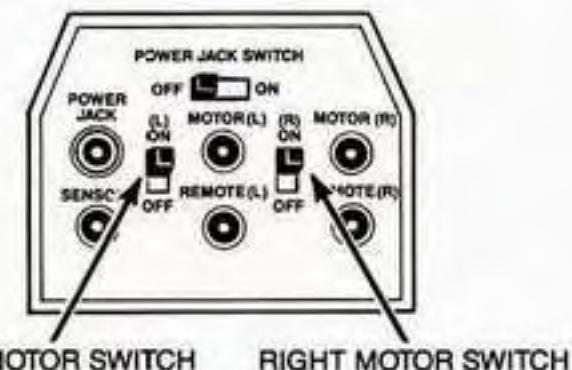

NOTE: Every time you turn Omnidbot ON, his arm, hand, wrist, and head will re-set to their original position. This is normal. Simply wait for him to re-set before operating him. You will hear a series of bleeps and Omnidbot's eyes will flicker when he's ready to go!

If Omnidbot does not bleep and his eyes do not flicker, check the digital clock for the flashing diamonds. If they are not flashing, press TC, AL, or M until the diamonds start flashing.

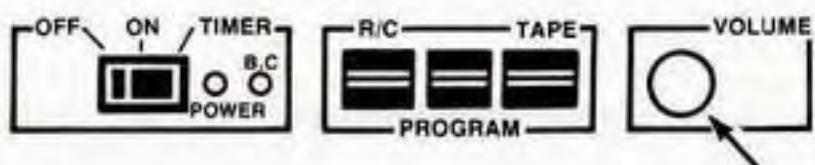

3. Look on Omnidbot's back. Make sure BOTH the left and right Motor Switches on the Accessory Interface Panel are ON.

REMEMBER: If BOTH Switches are not ON, Omnidbot will NOT function. **Keep BOTH Motor Switches ON!**

4. Volume: Adjusted to half way position.

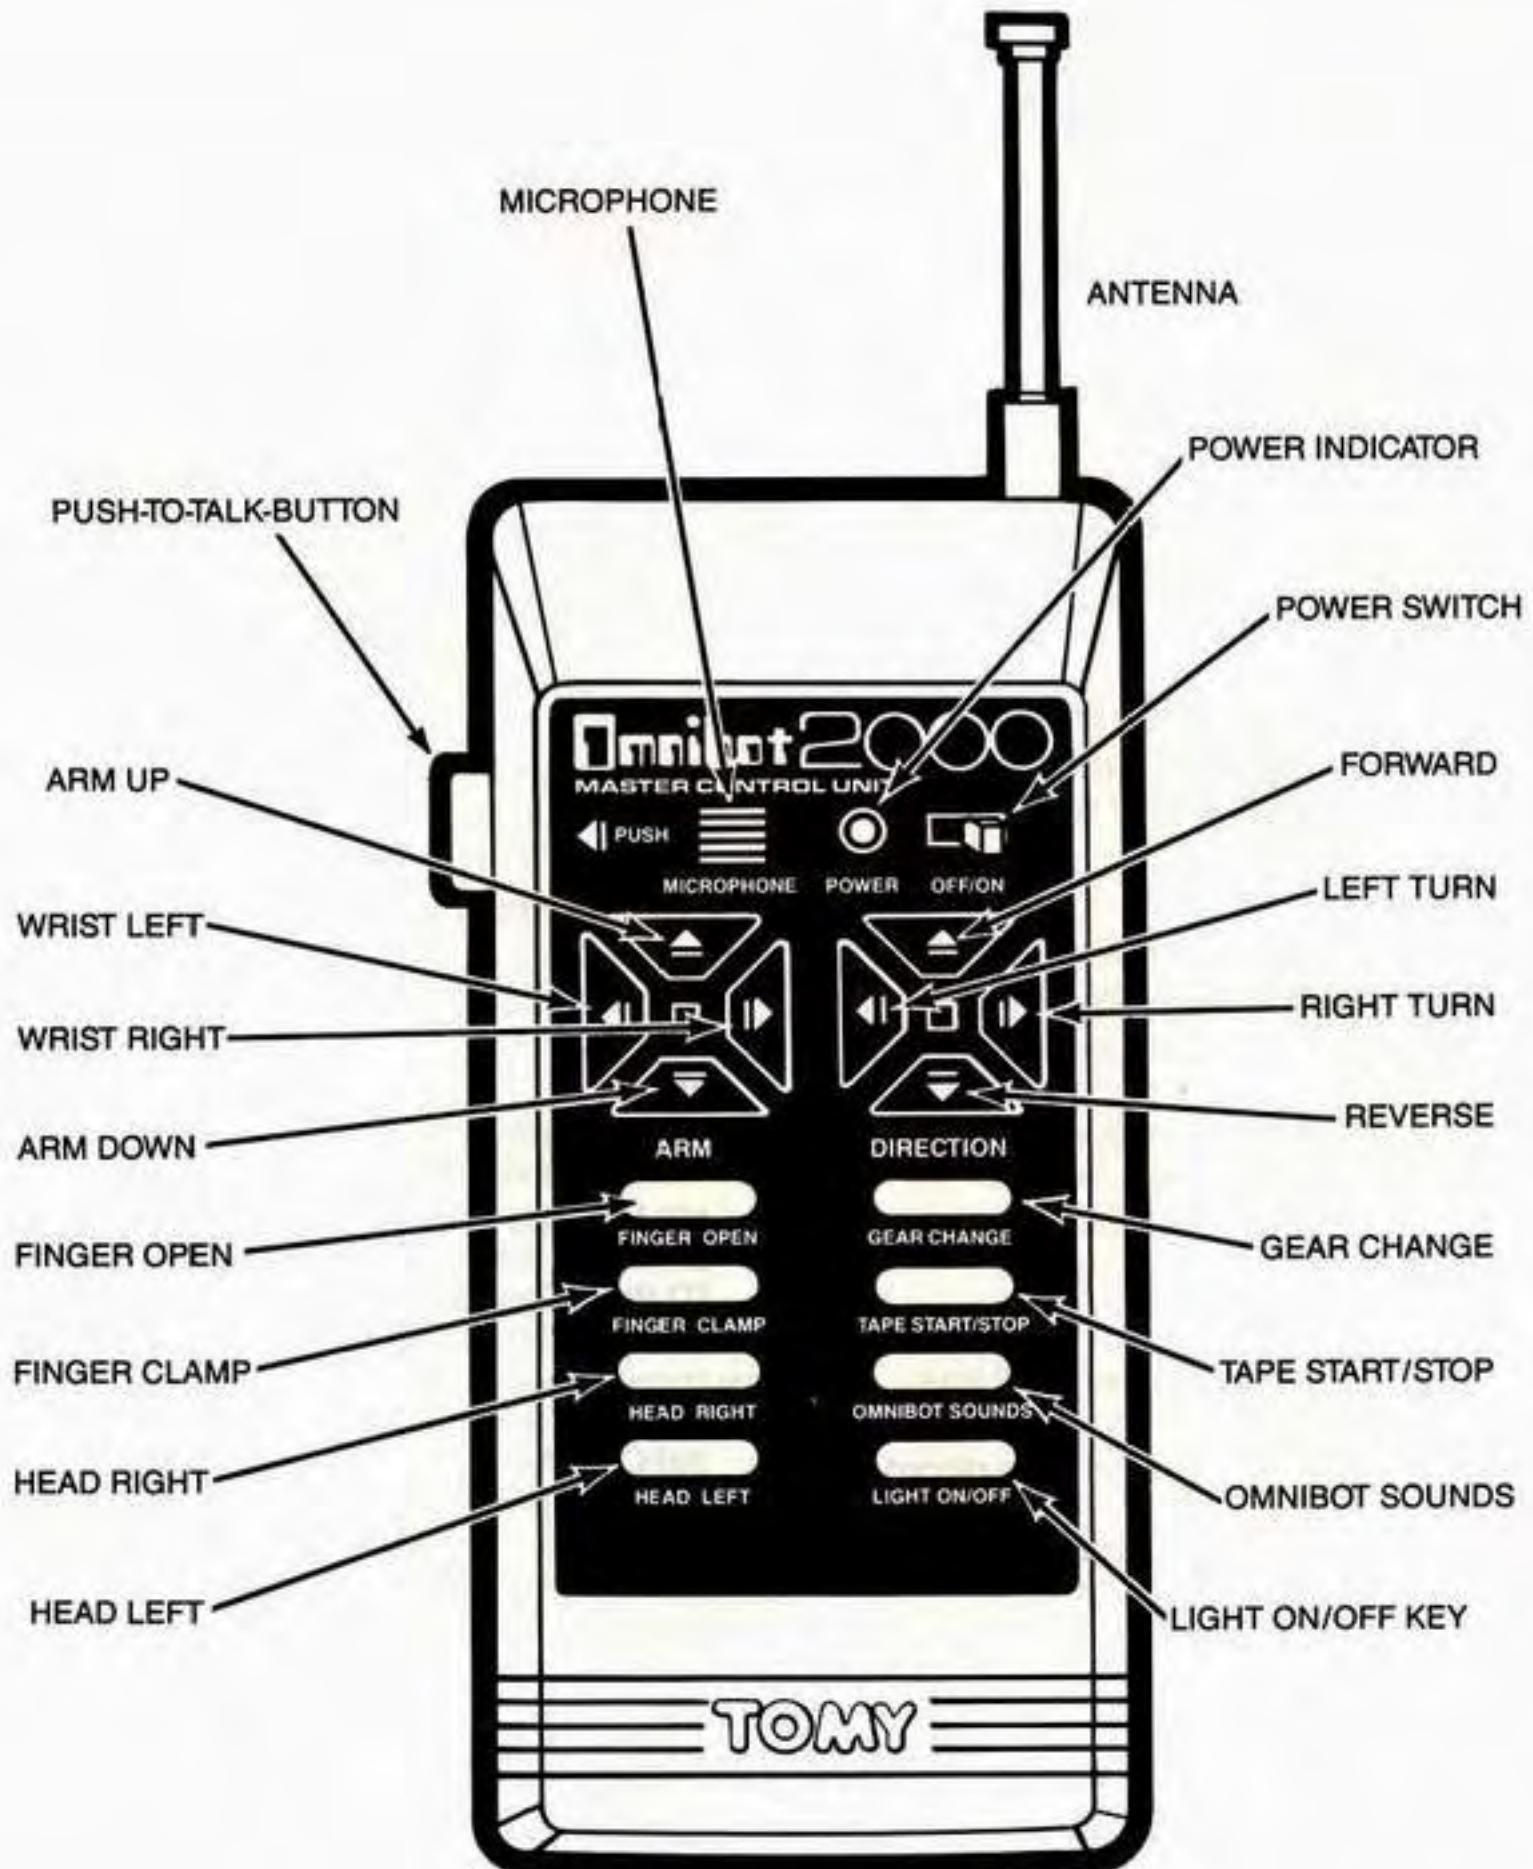

NOTE: If humming noise (feedback) occurs when operating in R/C Mode:

- A) Adjust the volume control on Omnidbot.
- B) Try moving a little further away from Omnidbot while operating his Master Control Unit (MCU).

5. You are now ready to operate Omnidbot with his Master Control Unit. Turn the MCU Power Switch to ON. Now, let's find out about the features of the MCU.

X. MASTER CONTROL UNIT (MCU)

MASTER CONTROL UNIT (MCU) (CONT'D)

The Master Control Unit (MCU) sends all remote control commands to Omnibot 2000. You should get familiar with the various movements and functions Omnibot can follow. Try out the different features as you go along. But first, make sure:

1. The battery is fully charged (12-16 hours).
2. Omnibot is set to R/C Mode.
3. Omnibot Power Switch is ON. REMEMBER: You must wait until Omnibot re-sets his motorized parts when first turned on.
4. Make sure the flashing diamonds appear on the digital clock.
5. Omnibot's Accessory Interface Panel Motor Switches are BOTH ON.
6. MCU Power Switch is ON.
7. MCU antenna is extended.

ANTENNA

Fully extend the antenna so clear signals reach Omnibot.

1. Pull the telescopic antenna straight up.
2. Do not bend.
3. When finished, CAREFULLY push down on the antenna to keep it from accidentally bending.
4. NEVER POINT THE ANTENNA DIRECTLY AT OMNIBOT. Aim the antenna upward so Omnibot can receive clear signals.

MICROPHONE

This microphone will transmit your voice to Omnibot's onboard speaker or record your voice onto cassette tape.

1. Hold the MCU approximately three inches from your mouth.
2. Hold in the PUSH-TO-TALK button and speak into the microphone next to the MCU Power Indicator.
3. Your voice will come through Omnibot's onboard speaker.

PUSH-TO-TALK BUTTON

1. When you hold in this button, you can send your voice to Omnibot's onboard speaker.
2. When used with the Cassette Unit, you can record your voice.
3. While this button is pushed in, you CANNOT operate any of the keys on the MCU.

NOTE: Omnibot will make a special robotic sound when you press the PUSH-TO-TALK button. Wait for the sound to stop before talking.

LIGHT ON/OFF KEY

Turn Omnibot's Headlight eyes ON and OFF by pressing the key.

1. Pressing the key will turn Omnibot's Headlight eyes ON if they are OFF, or OFF if they are ON.

GEAR CHANGE KEY

Omnibot has two gear speeds. When you first turn him ON, Omnibot will be automatically set to high speed. Pressing the key once will lower the gear. Pressing it

again will restore the high speed. You can also change gears while Omnibot is moving.

FORWARD & REVERSE

NOTE: All DIRECTION keys are located directly above the word DIRECTION on the right side of the MCU.

Pressing in the FORWARD or REVERSE keys will move Omnibot straight ahead or backwards, respectively.

1. You must hold in the key to activate the function.
2. Releasing the key stops the movement. This is true for ALL DIRECTION keys.
3. You may also use these keys in conjunction with the RIGHT TURN & LEFT TURN keys. Read next part for details.

RIGHT TURN (►) & LEFT TURN (◀)

Omnibot will make immediate right & left turns when you hold in the RIGHT TURN (►) or LEFT TURN (◀) keys.

TO MAKE WIDE TURNS:

1. Hold in the FORWARD and either the RIGHT (►) or LEFT (◀) TURN keys AT THE SAME TIME and Omnibot will make wide turns straight ahead.
2. Hold in the REVERSE and either the RIGHT (►) or LEFT (◀) TURN keys AT THE SAME TIME and Omnibot will make wide turns in reverse.

ARM, FINGER & WRIST KEYS

NOTE: The ARM keys are located above the word ARM on the left side of the MCU. NEVER manually turn, twist, or move Omnibot's motorized arm, finger, and wrist.

Pressing the keys activates the function. Releasing them will stop the movement.

1. ARM UP and ARM DOWN keys will raise and lower Omnibot's automated arm. BE VERY CAREFUL NOT TO PICK OMNIBOT UP BY HIS ARMS OR YOU MAY DAMAGE THE GEAR AND MOTOR.

CAUTION: Once Omnibot's arm has been raised to his limit, the arm will stop moving. It is VERY IMPORTANT that you RELEASE the ARM UP and ARM DOWN keys when Omnibot's arm stops moving.

2. WRIST RIGHT (►) and WRIST LEFT (◀) keys will rotate Omnibot's wrist. This feature operates in a 360° radius, so you may rotate his wrist round and round.
3. Holding in the FINGER OPEN key will open Omnibot's clamp hand. To close the clamp, hold in the FINGER CLAMP key.

NOTE: Do not allow Omnibot to pick up more than one pound (cups, bottles, cans) in his motorized hand. You may damage the motor if you have Omnibot lift more than one pound.

CAUTION: Like the ARM UP and DOWN keys, you should RELEASE the keys when the movement STOPS.

MASTER CONTROL UNIT (MCU) (CONT'D)

SPECIAL FEATURE: It is possible to control multiple arm and finger movements AT THE SAME TIME, while holding in the desired keys. For example, pressing the ARM UP and FINGER OPEN keys will raise Omnibot's arm and, at the same time, open his clamp hand!

HEAD RIGHT & HEAD LEFT

NOTE: NEVER manually twist, turn, or move Omnibot's motorized head.

Use the MCU to turn Omnibot's head right or rotate it left. You may turn the LIGHT ON/OFF key ON as he surveys his territory.

1. HEAD RIGHT and HEAD LEFT rotates Omnibots head right and left, respectively.
2. Like the ARM and FINGER keys, Omnibot's head will STOP when it reaches its limit. RELEASE the keys at that point to avoid damage.

TAPE START/STOP

THIS KEY ONLY WORKS IF ONE OF THE CASSETTE UNIT BUTTONS ARE PRESSED IN.

1. In the R/C Mode, press the TAPE START/STOP key to turn the Cassette Unit functions ON and OFF.
2. While in the R/C Mode, you can also operate the Cassette Unit directly on the front of Omnibot. But it won't work unless the TAPE START/STOP key on the MCU is ON.

OMNIBOT SOUNDS

Press this key and hear the mechanical man bloop and bleep.

SPECIAL NOTE: You will discover that Omnibot can change directions AND turn his head AND raise and lower his arm AND rotate his wrist AND open and close his clamp hand AND start and stop the Cassette Unit AND make sounds AND turn his Headlight eyes ON and OFF...ALL AT THE SAME TIME! Simply hold in the desired keys and Omnibot will follow your orders.

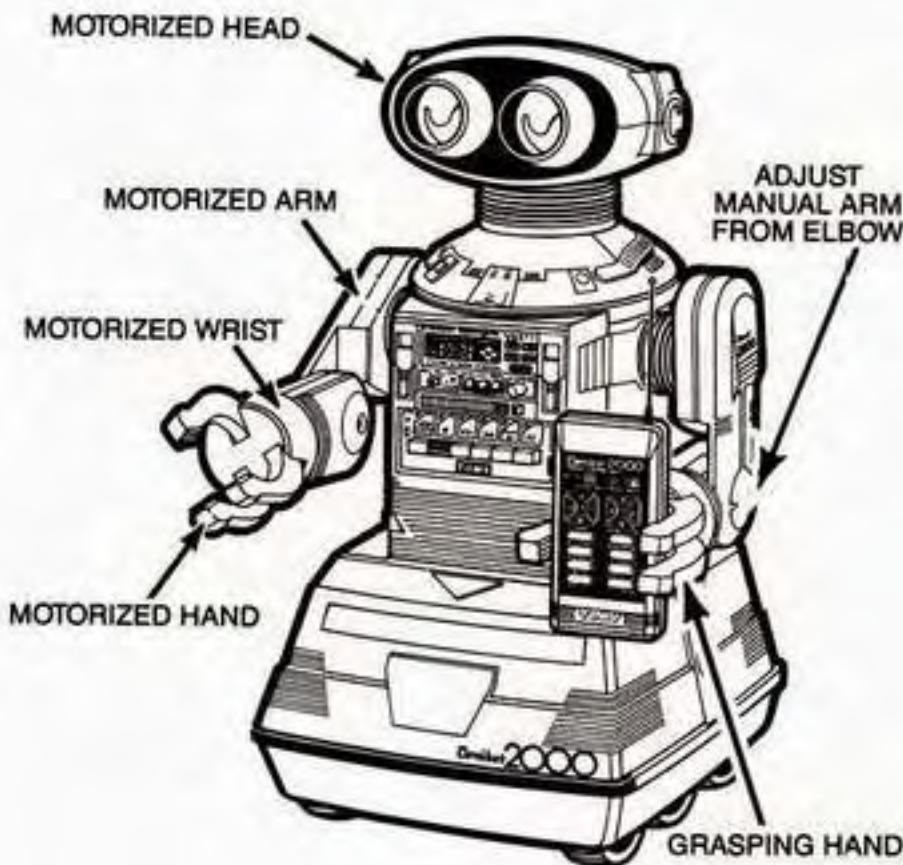

Now that you know all the features of the MCU, try out ALL the different movements & sounds. Get familiar with your new friend!

IN R/C MODE REVIEW

YOU CAN:	YOU CAN NOT:
<p>1. Operate Omnibot's movements.</p> <p>2. Operate Omnibot's Robot Sounds.</p> <p>3. Speak through MCU microphone and hear your voice through Omnibot's onboard speaker.</p> <p>4. Start and Stop cassette when onboard Cassette Unit buttons are pushed.</p> <p>5. Speak or sing into MCU microphone while cassette is playing—your voice will come out with the tape sound.</p> <p>6. Record onto cassette from the MCU microphone.</p> <p>7. Operate Omnibot's robot sounds and his travel at the same time.</p> <p>8. Use a microphone (not included) and plug it into the Cassette Unit Jack.</p> <p>Now you can:</p> <p>A. Project through Omnibot's speaker when the Cassette Unit is in PLAY.</p> <p>B. Project through Omnibot's speaker when the Cassette Unit is in RECORD. (Only when the MCU Push-to-Talk button is pushed)</p> <p>C. Record onto the cassette when the Cassette Unit is in RECORD.</p> <p>9. Operate the plug-in microphone (not included) and the Master Control Unit Push-to-Talk button—both at the same time to record and/or project your voice.</p>	<ul style="list-style-type: none">• Record movement signals onto cassette. Likewise, Omnibot will not obey movement signals already programmed on cassettes. (see: PROGRAM MODE section)• Make Omnibot travel and speak through his onboard speaker at the same time. If he is traveling and you start to speak through him, he will stop moving until you release the MCU Push-to-Talk button.• Operate Omnibot sounds and TAPE START/STOP button with the Master Control Unit if the clock display is in ALARM STORAGE or MEMORY—you must return to TIME OF DAY to operate Omnibot sounds and TAPE START/STOP button on Master Control Unit.

XI. MOTORIZED HEAD, ARM, & HAND

This section is to remind you that Omnibot's motorized head, arm, wrist, and hand must be handled with extreme care.

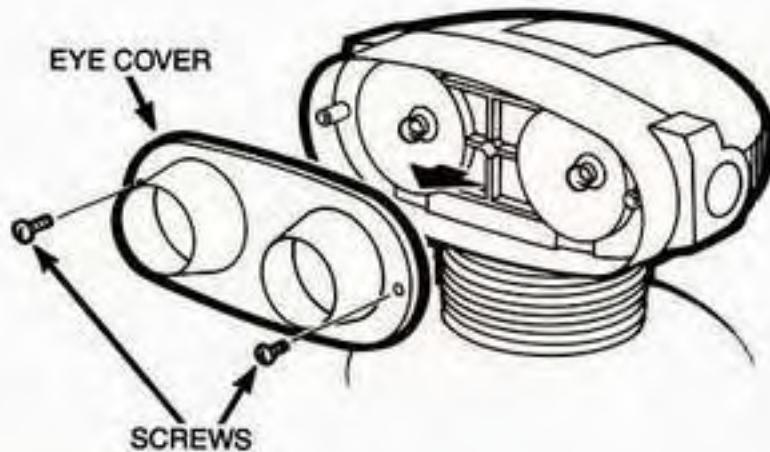

REMEMBER:

Omnibot will perform multiple functions ALL AT ONCE. Simply press the series of keys and Omnibot will do it all! Intimidate your friends: move Omnibot forward while raising his arm and opening his hand.

A. To Replace Headlight Eyes:

1. CAREFULLY remove the two phillips screws from the Eye Cover.

2. SLOWLY pull the Eye Cover straight out.

3. Unscrew the Eye Bulbs.

4. Replace with 2.8V, 200 mA bulbs. DO NOT USE BULBS LARGER THAN 3V, 250mA. Always replace BOTH bulbs or intensity of light between eyes will vary.

B. To Replace Eye Cover:

1. CAREFULLY fit Eye Cover back in place.

2. Replace two screws and tighten.

3. Omnibot is ready to blink away!

NEVER:

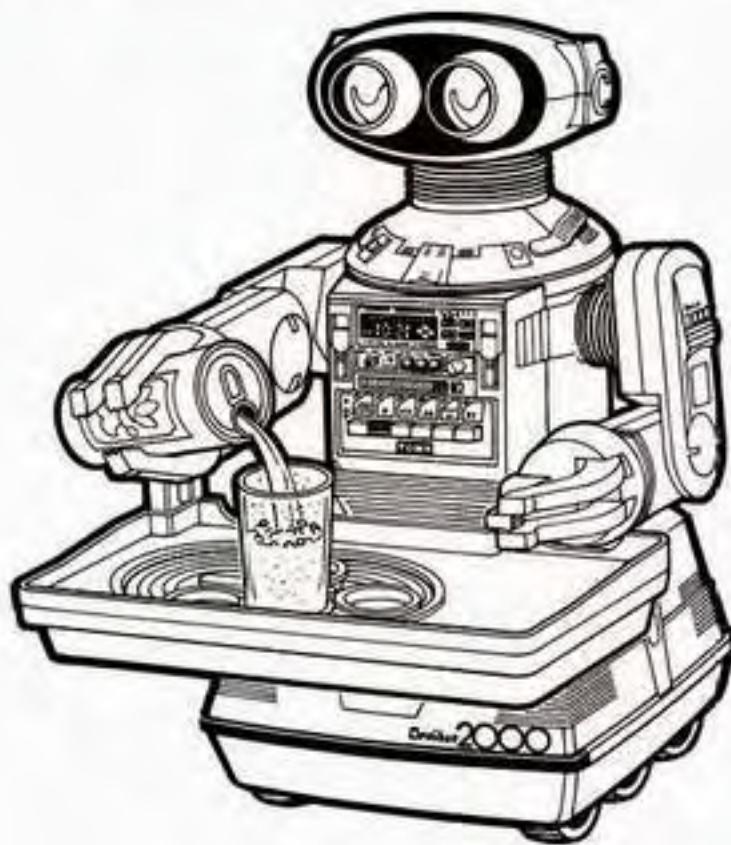

- Pick-up Omnibot by his head, arms, or hands.
- Twist or force Omnibot's neck, head, arms, or hands.
- Hold in the keys for Omnibot's automated head, arm, and hand once they have reached their limit.
- Pick-up objects in Omnibot's hand weighing more than one pound.

ALWAYS

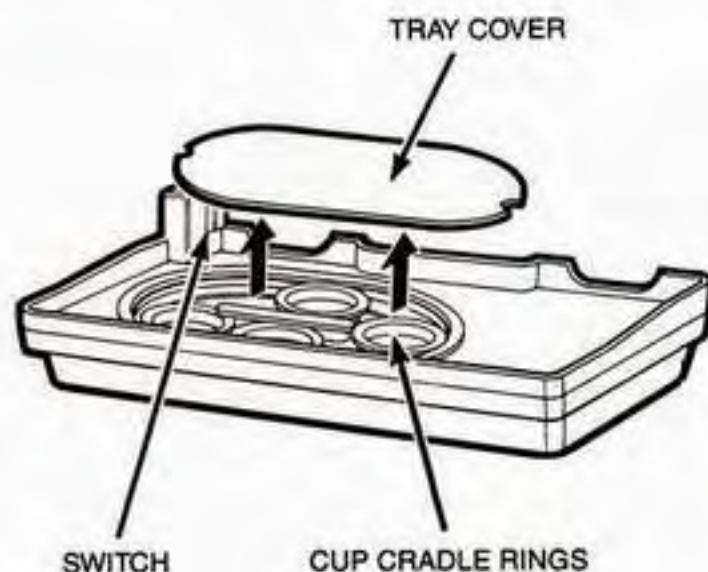

- Pick-up Omnibot by his carrying handles.
- Wait for Omnibot to re-set his automated parts after Power Switch is turned ON.
- Release the keys once Omnibot's automated parts have reached their limit.

XII. MOTORIZED TRAY

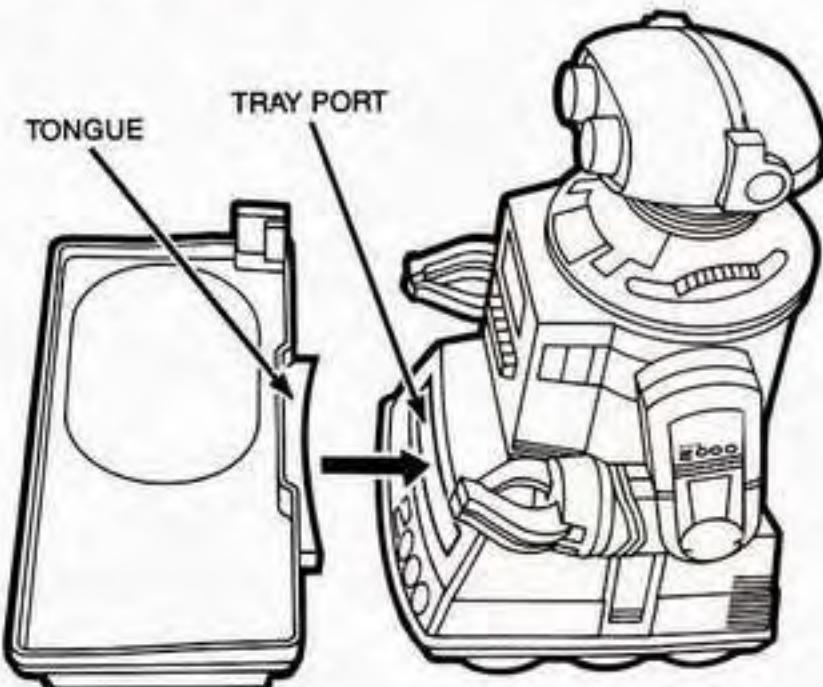

Omnibot comes with a special motorized tray. Lift the tray cover and you'll find cup cradles to help Omnibot rotate glasses when pouring a drink.

- B. To use the Tray so Omnibot lifts a cup or bottle:
1. Remove the Tray Cover as illustrated.

2. Place a bottle in one of the Cup Cradle Rings. Set a glass or cup in the Cup Cradle Ring next to the bottle as illustrated.

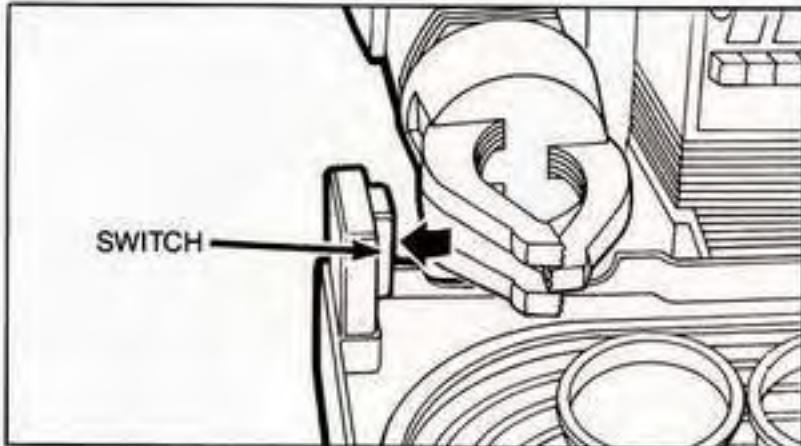

4. Carefully insert the Tongue into the Tray Port. Slide the Tray in until it stops.

REMEMBER: Maximum weight allowance of tray is 3 pounds. Also, avoid lifting containers or objects (with the motorized arm) in excess of 1 pound.

NOTE: For your first attempt, you may want to use an empty plastic cup instead of a glass bottle. After some practice, graduate to a filled plastic cup, then a filled bottle.

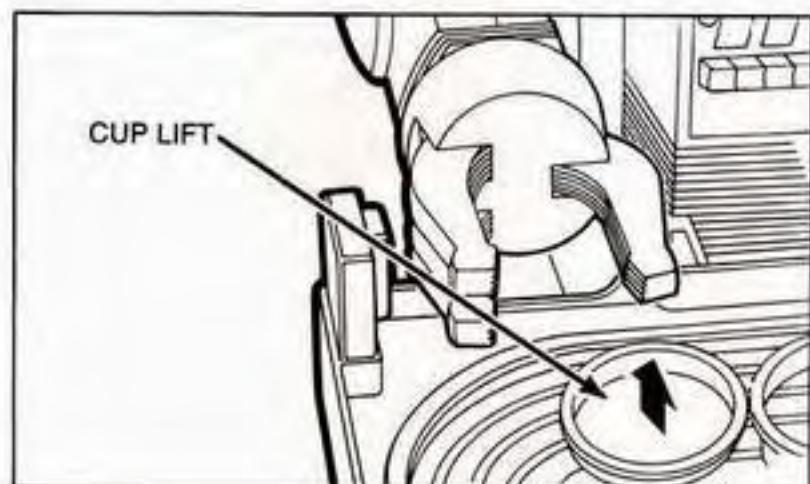

MOTORIZED TRAY (CONT'D)

3. Use the MCU to move the arm to the position as illustrated.

4. Press the MCU FINGER OPEN key to push in the Switch on the Tray. The rings will begin to rotate. Press the FINGER CLAMP to release the Tray Switch. DO NOT close the FINGER CLAMP completely! You'll have to be ready to pick up the bottle!
5. Let the cup and bottle circle until the bottle moves in front of the hand.
6. While the bottle is in the process of stopping in front of the hand, press the ARM UP key until the hand can grasp the bottle.

7. The Cup Lift will raise the bottle to clear the ring. While the bottle is lifted above the ring, press the FINGER CLAMP key to grasp the bottle.

8. Press the ARM UP key to lift the bottle above and beside the glass.
 9. Press the WRIST LEFT key to rotate the wrist toward the empty cup. Omnibot will pour your drink!
- C. To remove the Tray:
1. Clear the Tray of all objects. Return the Tray Cover.
 2. Hold the front of the Tray.
 3. Slightly lift the Tray up while pulling straight out.

How to clean tray:

Use a damp cloth to wipe up spilled liquids. DO NOT SUBMERGE TRAY IN WATER OR SERIOUS DAMAGE WILL RESULT.

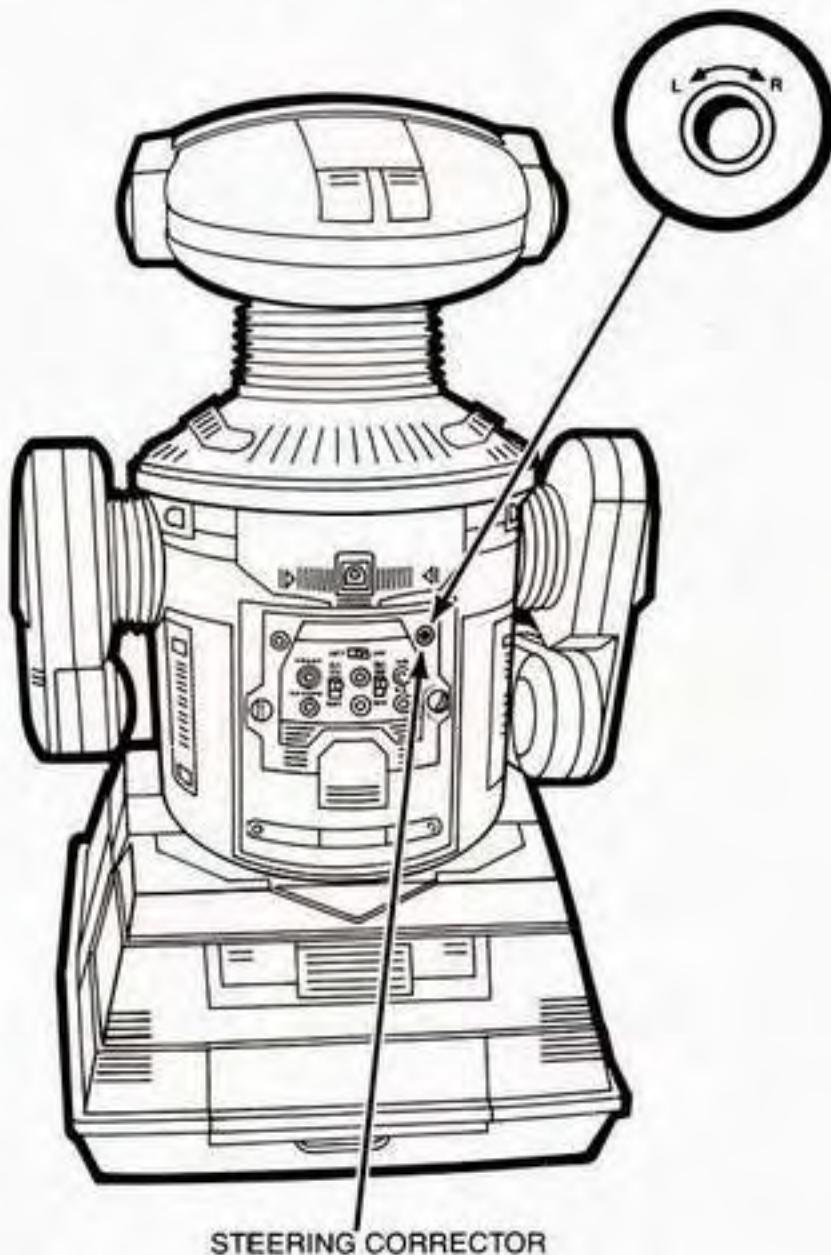

XIII. STEERING ADJUSTMENT

Now that you can operate Omnidot's Master Control Unit, you should check Omnidot's steering.

Omnidot should travel in a straight path when the MCU forward movement key is pressed. If he does not move in a straight path, Omnidot needs a steering adjustment. Adjust on a hard, clean surface.

TO CORRECT OMNIDOT'S DIRECTION:

1. Correct him only when he is **not moving**.
2. Insert a screwdriver (INCLUDED IN CONTENTS) into the Steering Corrector (see illustration).
3. Turn screwdriver slightly in the direction needed to correct Omnidot's course.
4. Test again until Omnidot travels in a straight path. Adjust on a hard, clean surface.

Once you make the initial steering adjustment, Omnidot should not require any further adjusting.

NOTE: IF YOU MAKE A STEERING ADJUSTMENT IN THE FUTURE:

After reading the whole Instruction Manual, you will see that you are able to record Omnidot's movements onto a cassette. When you play that cassette back, Omnidot will repeat those exact movements on the cassette.

HOWEVER, when you make a steering adjustment Omnidot will **not** be able to repeat those movements exactly as programmed...because you have changed the steering.

Thus...**WHENEVER YOU MAKE A STEERING ADJUSTMENT, YOU WILL HAVE TO RE-RECORD ANY MOVEMENT PROGRAMS YOU HAVE ON FILE.**

XIV. HOME BASE

In order for Omnibot to repeat his programmed cassettes exactly as recorded, he must start in the same place and direction.

To help you, Omnibot comes with his own Home Base.

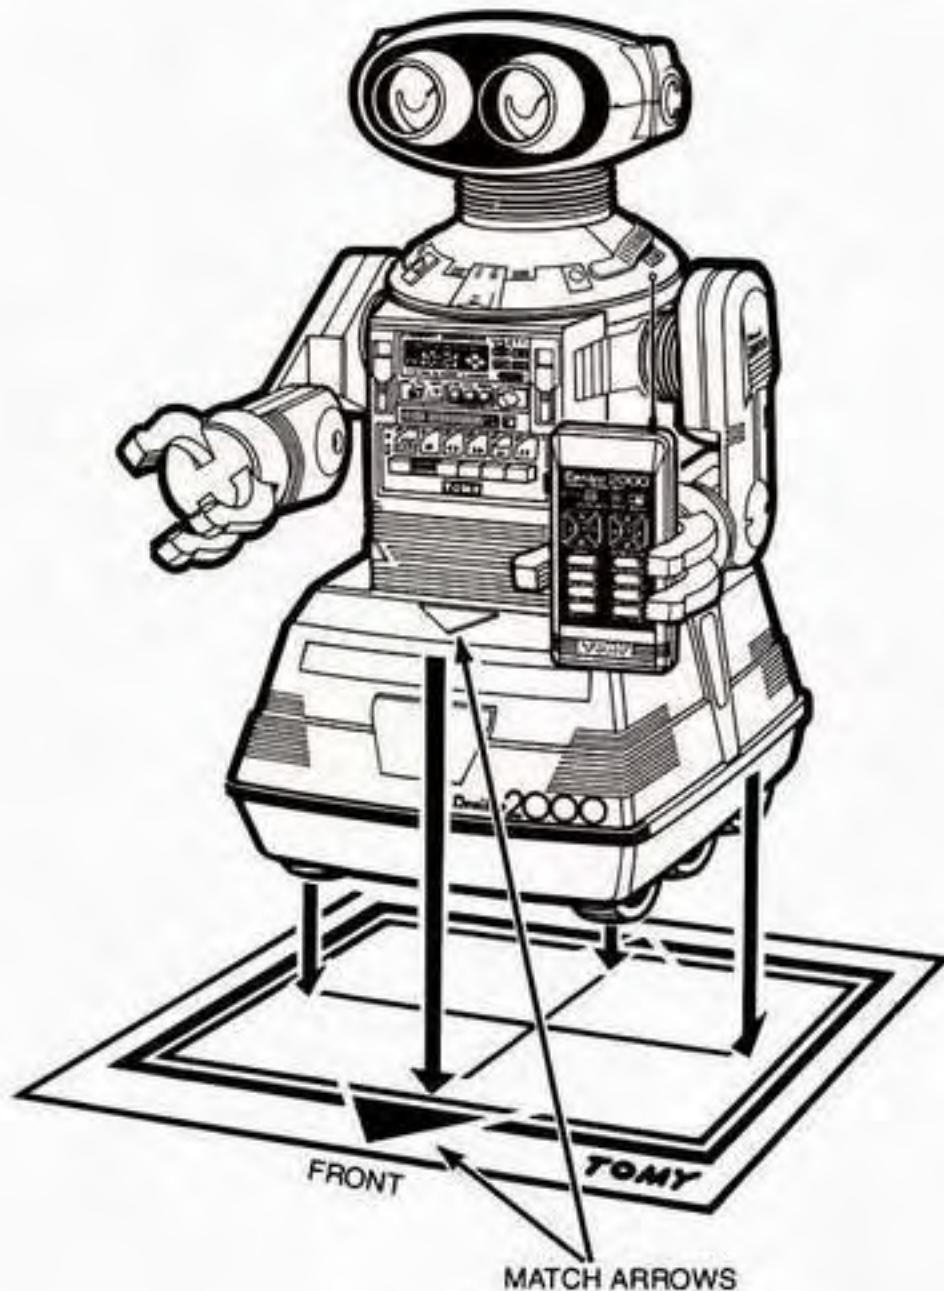

This is the place where you should begin all programs.

1. Set Home Base on the floor where you intend to store and keep Omnibot. It should be away from direct sunlight and extreme temperatures.
2. Secure Home Base to the floor with tape.
3. Center Omnibot on Home Base so that the arrows on

his front and back line up exactly with the front and back arrows on Home Base. (see illustration)

4. When Omnibot is properly centered on Home Base, there will be equal distance between Omnibot and every edge of Home Base.
5. Always start Omnibot from this exact same position on Home Base to ensure his accuracy.

NOTE: If you do not secure Home Base to the floor with tape or adhesive, Home Base may gradually move from its proper place. This would keep Omnibot from carrying out his programs exactly as recorded.

XV. MODE SELECTOR-PROGRAM

One of Omnidot's unique features is that you can create a program onto a cassette tape and then have Omnidot play it back. You can record into his memory (onto cassette)... movements, robot sounds, and your own voice all through the Master Control Unit.

There are two parts to this section:

A—How to create a program onto cassette.

B—How to playback the program you've created.

A. TO CREATE A PROGRAM ONTO CASSETTE:

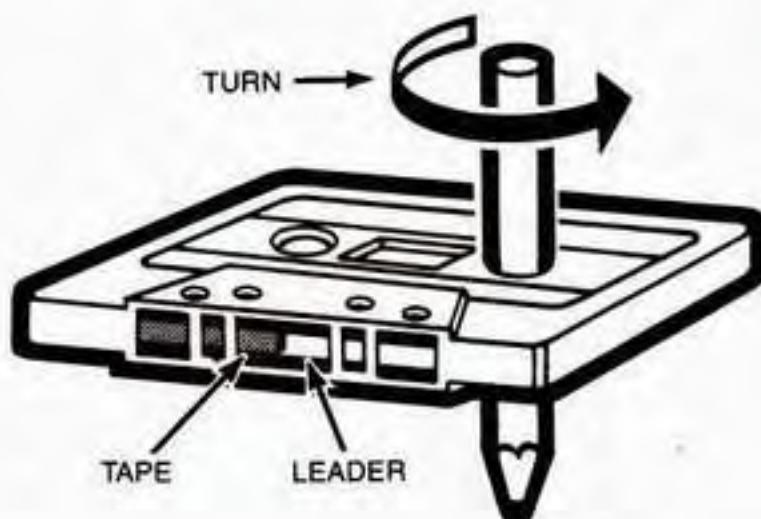

NOTE: When programming it is important to remember Omnidot's starting place and position. To help you do this Omnidot comes with his own Home Base. If you program Omnidot's movements and forget to put him exactly where he started, his movements could lead him elsewhere.

1. Omnidot Power Switch: ON
REMEMBER: BOTH Motor Switches on back: ON
2. Mode Selector Switch: PROGRAM
3. Master Control Unit: ON
4. Antenna on Master Control Unit: Extended
5. Volume: Adjusted to desired level.
6. Cassette Unit: Rewind cassette to beginning and insert.

NOTE: Every cassette tape has what is called a "leader" at both ends. This is a non-magnetic tape which you can **not** record on. It looks different from the recording tape. (leader can be clear or a color such as white or yellow, etc.) Thus, your program will not actually start recording or playing until the cassette winds past the leader and gets to the magnetic tape.

If you want Omnidot to perform EXACTLY on cue (to ensure that you are past the leader):

- a. rewind your cassette completely
- b. remove your cassette from the Cassette Unit
- c. insert a pencil or similar object (as illustrated) and turn the leader until the tape appears. Position the leader/tape as pictured below.
- d. Place the cassette back into the Cassette Unit. Now the magnetic tape will begin exactly on cue when you start the Cassette Unit.

7. Cassette Unit:

- A) Push the PAUSE button (00).
- B) Push the RECORD button (•).
- C) Release the PAUSE button when you are ready to start.

Now you are ready to program Omnidot through the Master Control Unit.

Omnidot will record into his memory (onto cassette) all the movements, robot sounds and your voice through the MCU microphone.

Stay more than 5 feet away from Omnidot while programming to make sure he gets clear signals.

NOTE: Master Control Unit's tape STOP/START button will NOT work in PROGRAM mode.

You must stop and start the cassette by operating the onboard Cassette Unit Buttons.

Also, Clock Display must be in Time of Day (not Alarm Storage or Memory) in order to operate Omnidot sounds from the Master Control Unit.

When you have finished programming, stop and rewind your cassette tape. Don't forget to turn off Omnidot's power switch and the Master Control Unit.

B. TO PLAYBACK A PROGRAM:

1. Omnidot's Power Switch: ON
REMEMBER: BOTH Motor Switches on back: ON
2. Mode Selector Switch: PROGRAM
3. Volume: adjusted to desired level.
4. Cassette Unit: rewind programmed cassette to beginning of program. (If you want the program to start exactly on cue, wind past the leader as you did when programming. (see illustration))
5. Omnidot: in exact place where he started the program (Home Base).
6. Cassette Unit: PLAY button pushed.

NOTE: When you have created a program onto cassette that you wish to keep:

Mark it for your records and file it. This way you can build your own customized library of taped programs for Omnidot. (example: include in your library such things as Omnidot's wake up path for the entire family, his kitchen to living room deliveries, room to room messenger service, etc...).

To stop Omnidot in the middle of a taped program, push the cassette STOP or PAUSE button.

YOU CAN ALSO PLAYBACK A PROGRAM BY SETTING THE CASSETTE (LIKE AN ALARM) TO START AT A PROGRAMMED TIME... TO DO THIS, SEE NEXT SECTION—"CASSETTE PROGRAMMING."

SEE PROGRAM MODE CHART ON NEXT PAGE

MODE SELECTOR-PROGRAM (CONT'D)

IN PROGRAM MODE REVIEW

YOU CAN:	YOU CAN NOT:
<ol style="list-style-type: none">1. Operate the Master Control Unit when the Cassette Unit is in RECORD.2. Operate everything on the Master Control Unit except the tape start/stop button.3. Operate Omnibot's robot sounds and his travel at the same time (forward & reverse only).4. Record movement signals as well as voice. Omnibot will repeat them when played back.5. Playback programmed tapes.6. Set a pre-programmed tape to come on at a pre-set time by setting the cassette alarm storage. (see CASSETTE PROGRAMMING section).	<ul style="list-style-type: none">• Make Omnibot travel and speak through his onboard speaker at the same time. If he is traveling and you start to speak through him he will stop moving until your hand is off of the MCU microphone button.• Operate the Master Control Unit tape start/stop button. This button only works in R/C Mode.• Operate Omnibot sounds with the Master Control Unit if the Clock Display is in Alarm Storage or Memory—you must return to Time of Day in order to operate Omnibot sounds with the Master Control Unit.• Operate Omnibot by the Master Control Unit when the Cassette Unit is in PLAY or OFF.

SPECIAL PROGRAMMING NOTE:

1. DO ALL PROGRAMMING WITH OMNIBOT'S MOTORIZED PARTS IN THEIR ORIGINAL POSITION! **This is very important!** Turn Power Switch OFF, then ON to re-set his motorized parts before programming.
2. Before playing back a programmed tape, turn Omnibot OFF, then ON again so he will re-set his motorized parts to their original position.

XVI. CASSETTE PROGRAMMING

IF YOU HAVE ANY QUESTIONS, call toll free number
for assistance:

(800) 421-5597 FOR OUTSIDE CALIFORNIA
(800) 421-8496 FOR CALIFORNIA RESIDENTS
To save time, be sure to have Omnidbot and your instructions by the phone when you call our service assistant.

TO SET A CASSETTE (PROGRAMMED OR REGULAR)
TO PLAY AT A PRE-PROGRAMMED TIME.

**NOTE: CASSETTE PROGRAMMING IS
DIFFERENT FROM THE ALARM
PROGRAMMING IN THAT A SHUT-OFF TIME
MUST ALSO BE PROGRAMMED. IF YOU DO
NOT PROGRAM A SHUT-OFF TIME,
OMNIBOT WILL REJECT THE PROGRAM.**

The shut-off time should not be longer than 45 minutes after your cassette start time.

DON'T use any tapes longer than C-60. C-30's or shorter are best for your tape machines' care.

The Cassette Unit has an automatic shut-off feature which stops the cassette at its end. However, even with this feature a stop time must be programmed after each start time. If you fail or forget to program a stop time, Omnidbot will blink at you and give you a reject sound.

IF YOU GET A REJECT SOUND, YOU MUST FOLLOW THIS PROCEDURE:

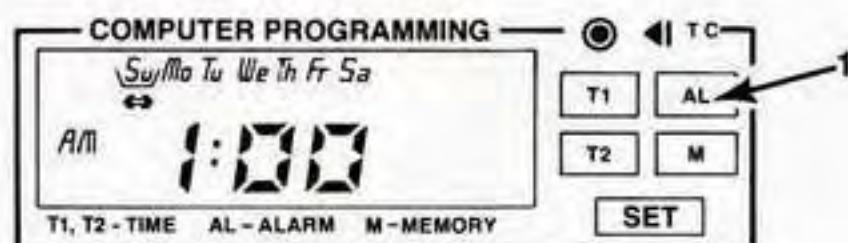

- Push SET (if you get another reject sound, ignore it and continue).
- Push AL to return to the Time of Day.
- Push AL to reenter Alarm Storage.

Now, begin again to program your cassette start and stop times.

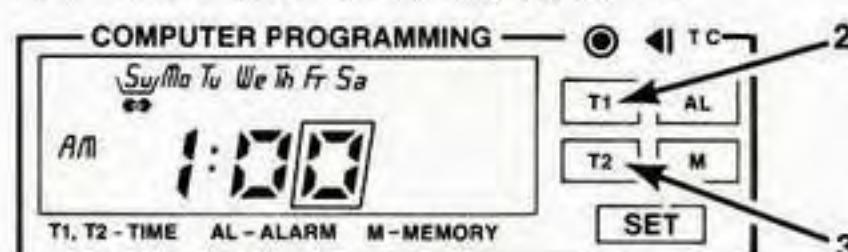

Example: Let's say we want the cassette to start playing at 5:42 pm Saturday and to stop at 6:00 pm Saturday.

- Push AL.

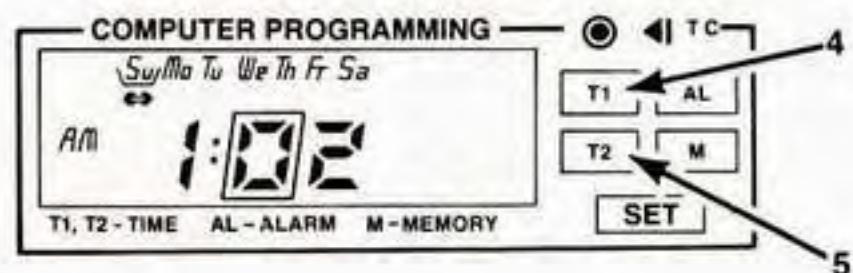

(Note: In our example we show 1:00 am Sunday. However, your storage 1 time may be different if you have already programmed it.)

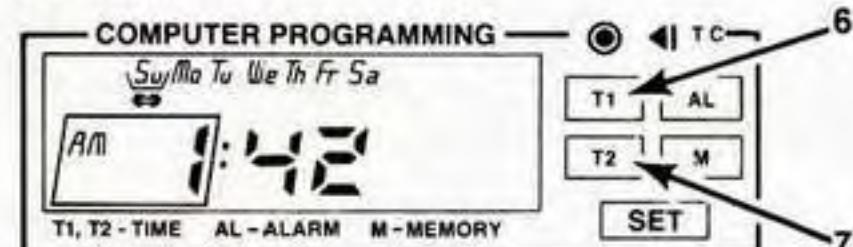

- Push T1.
- Push T2 to change the flashing digit (to 2).

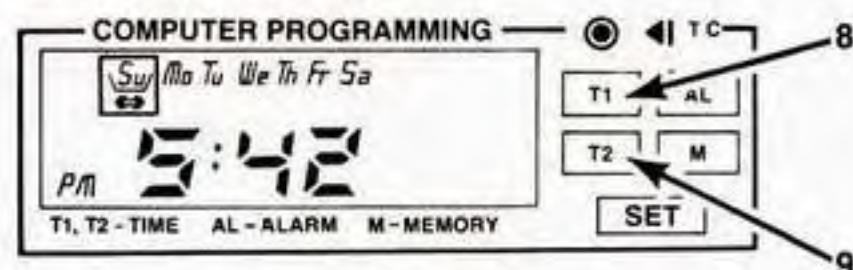

- Push T1.
- Push T2 to change the flashing digit (to 4).

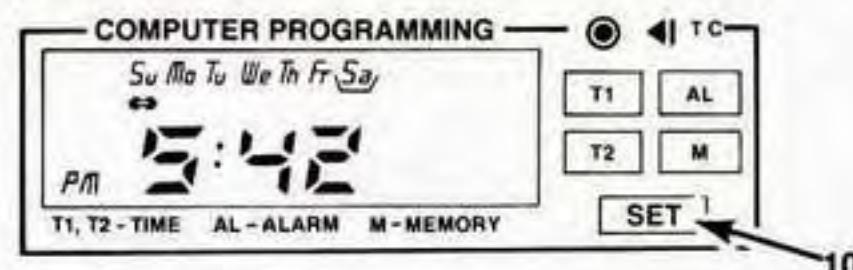

- Push T1.
- Push T2 to change the flashing hour and am/pm (to 5 pm).

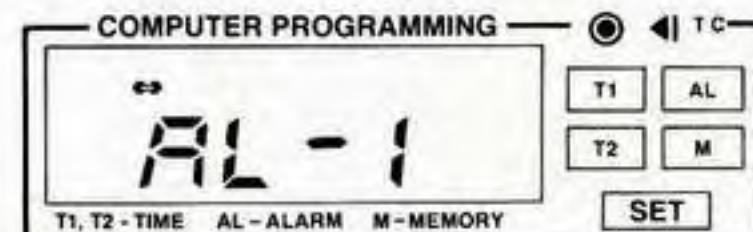

- Push T1.
- Push T2 to change the flashing line under the day of the week (to Saturday).

- When cassette starting time and day are programmed push SET.

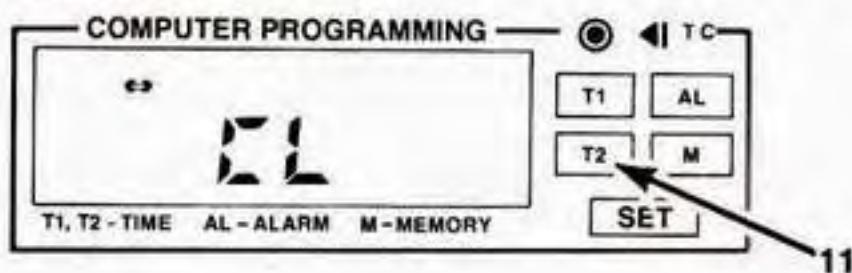

- At this time your screen will show AL-1.

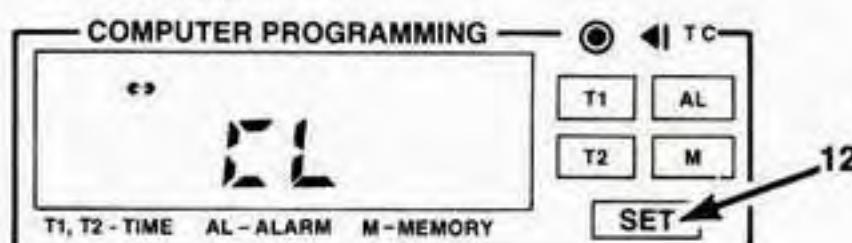

NOTE: If an alarm or cassette setting has already been programmed previously, that alarm or cassette setting will appear on the screen.

CASSETTE PROGRAMMING (CONT'D)

11. Push T2 until CL appears on the screen. (CL = Cassette Lock)

12. Push SET again.

13. A time will now appear on the screen. You must now program the cassette shut-off time (in this case 6:00 pm Saturday).

NOTE: In our example we show 1:00 am Sunday. However, your shut-off time may be different if you have already programmed it.

If you forget or fail to program a shut-off time, Omnibot will blink at you and give you a reject sound.

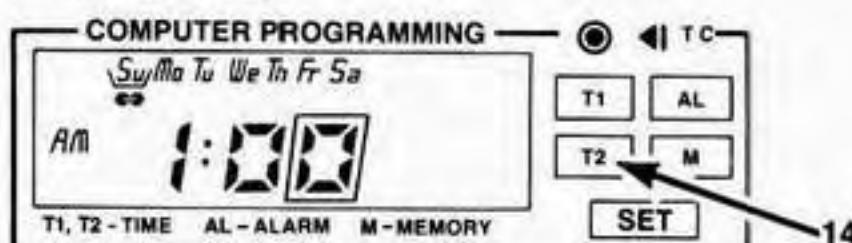

NOTE: IF YOU GET A REJECT SOUND, YOU MUST FOLLOW THIS PROCEDURE:

- Push SET (if you get another reject sound, ignore it and continue.)
- Push AL to return to the Time of Day.
- Push AL again to reenter Alarm Storage.

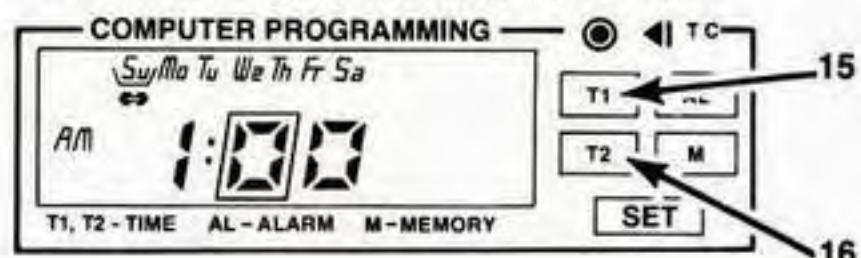

Now, go back to step 2 to begin programming again.

14. Push T2 to change the flashing digit (in this case it should stay at 0).

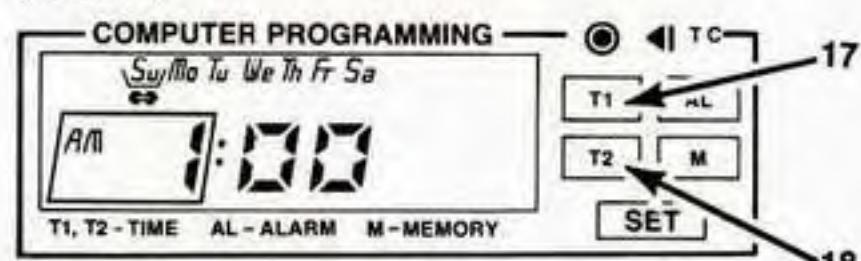

15. Push T1.

16. Push T2 to change the flashing digit (to 0).

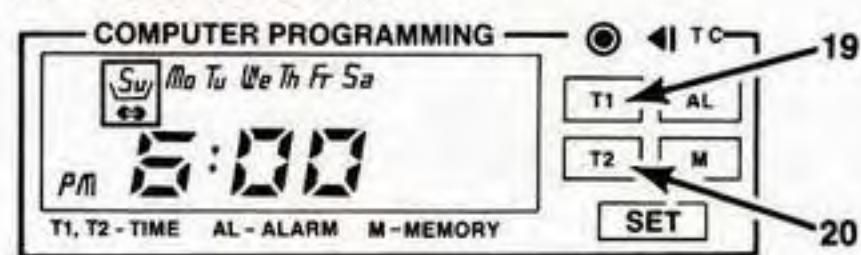

17. Push T1.

18. Push T2 to change the flashing hour and am/pm (to 6 pm).

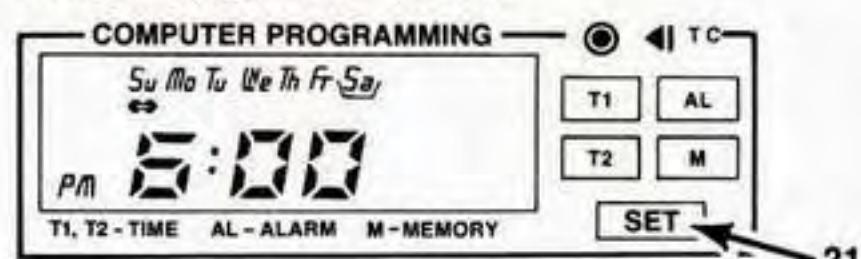

19. Push T1.

20. Push T2 to change the flashing line under the day of the week (to Saturday).

21. When the shut-off time and day are correctly set (NO MORE THAN 45 MINUTES AFTER THE CASSETTE START TIME) push SET button.

Storage 2 will now appear on the screen. (The shut-off time and day will automatically be stored in Omnibot's memory.)

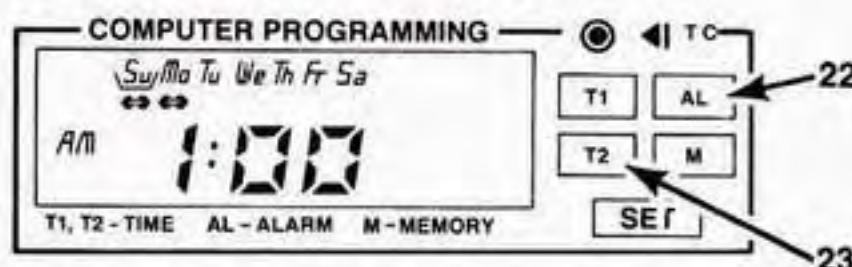

If a cassette or alarm time has not been programmed into Storage 2, the screen will flash the far right digit of 1:00 am Sunday.

CASSETTE PROGRAMMING (CONT'D)

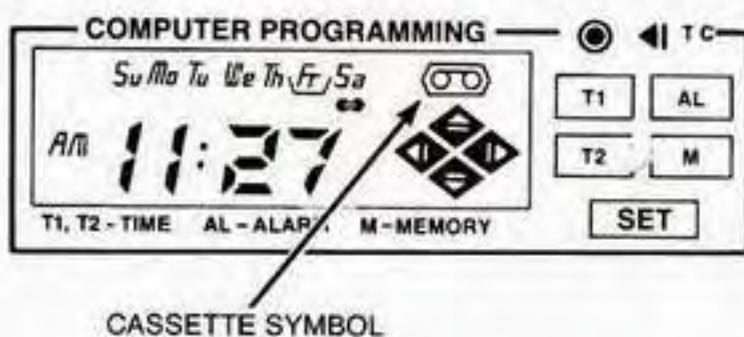

NOTE: If a cassette or alarm time has been programmed into Storage 2 that time will appear on the screen.

22. Push AL to return to Time of Day.
23. Push T2 to set the cassette programmed time.

In our example:

The cassette is now programmed to start at 5:42 pm Saturday and to stop at 6:00 pm Saturday. The cassette symbol in the upper right hand corner of the screen will confirm this.

NOTE: The illustration now indicates the Time of Day (in this case, 11:27 am Friday). The cassette start and stop time have already been stored in Omnibot's memory.

T2 will now operate as a cassette program on and off button. When the cassette symbol is on your screen, all your cassette programs are set to run as programmed. When the cassette symbol is not on the screen, then all your cassette programs are shut off.

25. TO ERASE A PROGRAMMED TIME

- A) Push AL to get into Alarm Storage.
- B) Push SET to get to the Storage you want to erase.
- C) First, push M. Then while holding M down, push SET at the same time.
The display will now show 1:00 am Sunday, flashing—Your programmed time is now erased.
- D) Push AL to leave Alarm Storage.

THE NEXT STEPS FOR CASSETTE PROGRAMMING ARE AS FOLLOWS:

1. Load Cassette Unit with your cassette. If you want Omnibot to perform EXACTLY on cue.
 - a. Rewind your cassette completely.
 - b. Remove your cassette from the Cassette Unit.
 - c. Insert a pencil or similar object (see illustration on Page 29) and turn until leader and tape are equally exposed.

d. Place the cassette back into the Cassette Unit. Now the tape will begin exactly when you start the Cassette Unit.

2. Set Omnibot Mode Selector to:
TAPE—for voice or music only (NO MOVEMENT)
or
PROGRAM—for playing back pre-recorded tapes with voice and MOVEMENT.

Be sure to place Omnibot on his Home Base or starting point so he can follow exactly what he is programmed to do.

3. Turn Omnibot ON to allow him to re-set his motorized parts. **THIS IS VERY IMPORTANT!**

You must always program with motorized parts in their original position.

You must always play back programs with motorized parts in their original position.

4. Once Omnibot's motorized parts have returned to their original position (listen for the series of bleeps), slide the Power Switch from ON to the TIMER position.

5. Adjust VOLUME control to your desired level.

6. Push PLAY button.

NOTE: Cassette will not play because it is in TIMER position and set to run at your programmed time.

To turn cassette off manually before it is programmed to shut-off, push cassette STOP button first, then push SET.

NOTE: YOU MUST PUSH "SET" OR OMNIBOT'S TIME DISPLAY WILL NOT RESPOND TO YOUR COMMANDS UNTIL THE TIME DISPLAYED ON THE SCREEN REACHES THE SHUT-OFF TIME. SO, REMEMBER TO PUSH "SET."

SUMMARY

- | | |
|-----|---|
| AL | = Alarm Storage. This is used for entering and leaving the Alarm Storage. (The Alarm Storage holds both Alarm Programming and Cassette Programming.) |
| T1 | = Moves the "flashing" to the next digit/day—when in Alarm Storage. |
| T2 | = Changes the individual digit/day—When in Alarm Storage.
Becomes a Cassette Programming On/Off button—when out of Alarm Storage. |
| SET | = When in Alarm Storage:
Sets the Cassette Programming time and day. Also sets (CL) Cassette Lock. Can also be used to skip from one alarm storage to another.

When out of Alarm storage:
Shuts off the cassette programming when the cassette is running. |

SET + M = To erase a Cassette Programming time and day. (First push M. Then while holding M down, push SET at the same time.)

XVII. SING-A-LONG

How to have your VOICE and CASSETTE RECORDED MUSIC come from the same speaker:

PLUG-IN MICROPHONE (NOT INCLUDED)

*See Technical Specifications Section on what kind of microphone to get.

1. Omnibot's power switch must be ON.
REMEMBER: BOTH Motor Switches on back: ON.
2. Omnibot's Mode Selector must be on TAPE.
3. Volume control adjusted to desired level.
(usually set at half way)
4. Microphone (not included) plugged into Cassette Unit jack (located to the side of STOP/EJECT button).
5. Cassette Unit loaded with your music tape.

MASTER CONTROL UNIT

1. Omnibot's power switch must be ON.
REMEMBER: BOTH Motor Switches on back: ON.
2. Omnibot's Mode Selector must be on R/C.
3. Volume control adjusted to desired level.
(usually set at half way)
4. Master Control Unit power switched ON. MCU antenna extended.
5. Cassette Unit loaded with your music tape.

WHEN YOU PLAY YOUR CASSETTE TAPE, YOU CAN NOW SING-A-LONG INTO YOUR MICROPHONE (plug-in or Master Control Unit).

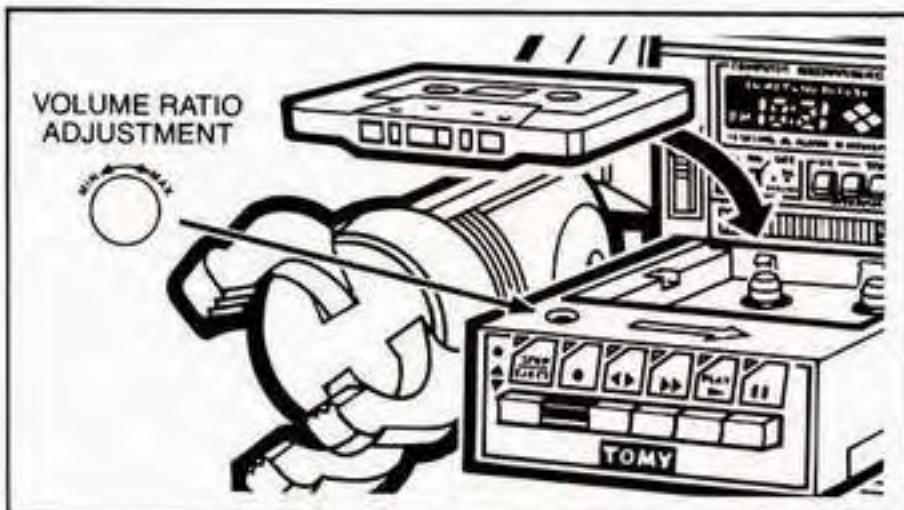

BOTH YOUR VOICE AND THE CASSETTE RECORDED MUSIC WILL PROJECT FROM THE SAME OMNIBOT ONBOARD SPEAKER!

To control which is louder, the voice or the cassette music:

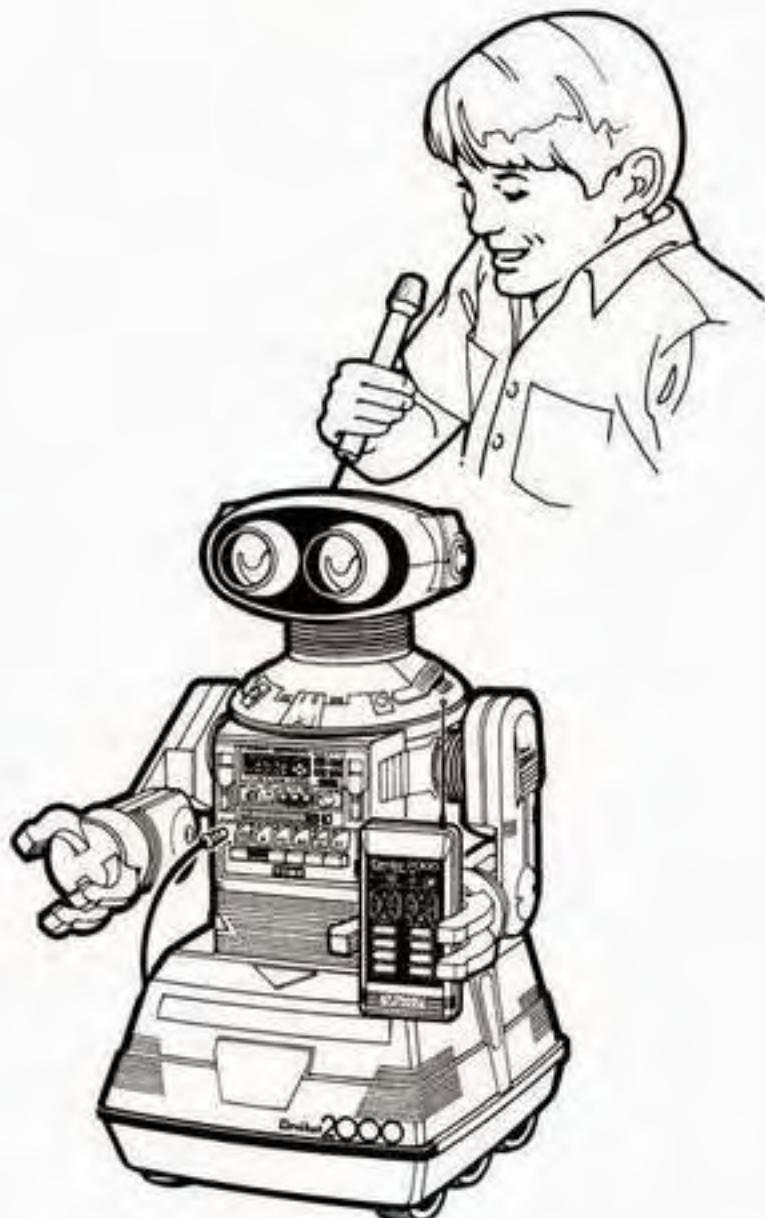

1. Pull out Cassette Unit (slide OPEN lever to do this).
2. Find volume ratio adjustment (see illustration).
3. Insert a screwdriver and turn:
 - A) To the right (maximum) to increase the microphone volume.
 - B) To the left (minimum) to increase the cassette music volume.

OMNIBOT'S FLASHING EYES ARE STROBE SYNCHRONIZED TO THE SOUND LEVEL OF THE SPEAKER SYSTEM!

WELCOME TO OMNIBOT'S SING-A-LONG FEATURE!

NOTE: Recording level can be adjusted with Volume Ratio Adjustment.

XVIII. ACCESSORY INTERFACE PANEL

WARNING: DO NOT PLUG OR ATTACH ANYTHING (INCLUDING APPLIANCES, DEVICES, ETC.) INTO THE ACCESSORY INTERFACE PANEL. THIS IS VERY IMPORTANT! YOU MAY DAMAGE OMNIBOT. THIS PANEL IS FOR ACCESSORIES WHICH WILL BE SOLD SEPARATELY AT A LATER DATE. FURTHER INSTRUCTIONS WILL BE INCLUDED WITH EACH ACCESSORY THAT YOU PURCHASE.

NOTE: ALWAYS KEEP THE POWER JACK SWITCH OFF. YOU WILL LEARN HOW TO USE THE POWER JACK SWITCH WHEN YOU PURCHASE ACCESSORIES AT A LATER DATE.

You already know BOTH Motor Switches must be ON in order for Omnibot to operate. Let's see briefly what Omnibot will be able to do with his exciting line of accessories!

PHOTO SENSOR!

You'll be able to control Omnibot by a photo-electric eye! Simply pass by the photo sensor and Omnibot will be activated.

INFRARED SENSOR!

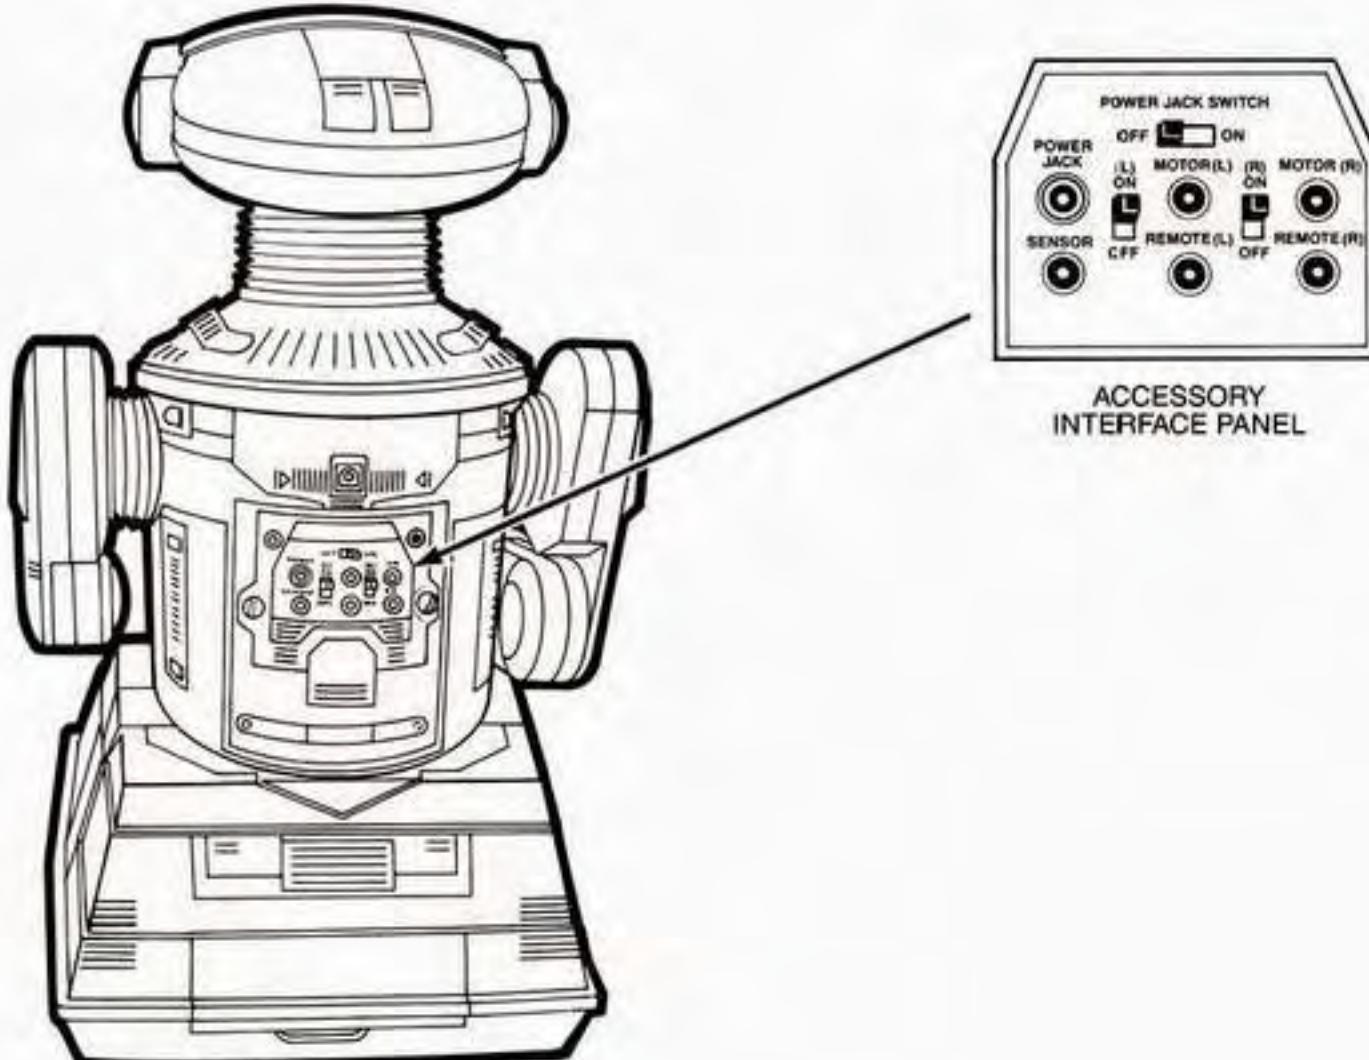

Omnibot will soon be able to avoid all obstructions. If he approaches a wall or a person, he will steer away all by himself!

SUPER-SONIC SENSOR!

Soon you won't be able to walk away from Omnibot... he'll follow you everywhere with this Super-sonic sensor!

AND THAT'S ONLY THE BEGINNING! TOMY IS CONSTANTLY DEVELOPING NEW WAYS TO ENHANCE YOUR OMNIBOT.

To keep posted on the Omnibot accessories, don't forget to fill out the enclosed Questionnaire and mail it TODAY!

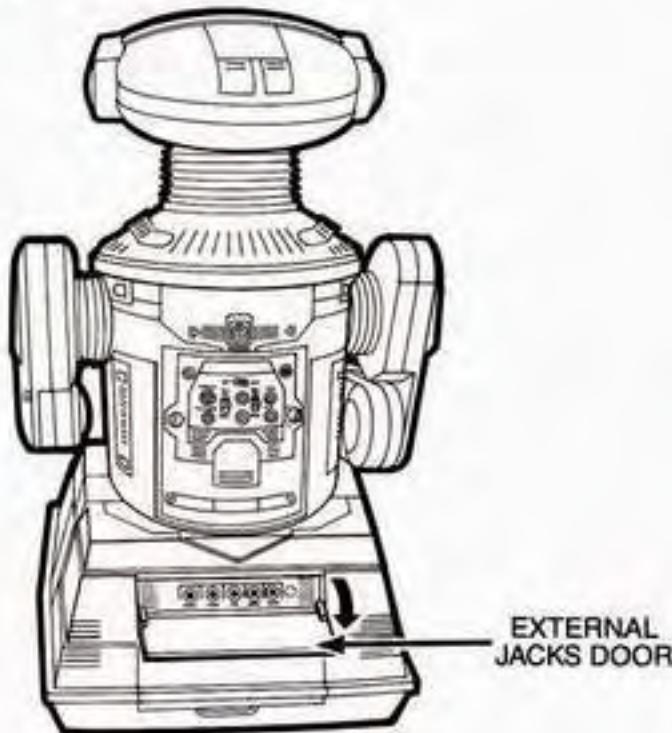

XIX. EXTERNAL JACKS & STORAGE DRAWER

NOTE: All five external jacks, are center pole positive.

EXTERNAL JACKS

- A. To expose the External Jacks:
 1. Lift up External Jacks Door.
 2. Pull Door back towards you.

- B. To close Door:
 1. Simply lift Door up and push inward.
 2. The Door will slide down into place.
- C. To attach external speaker:
 1. Connect a patch cord with a 1/8" mini-plug into the SPEAKER Jack.
 2. Attach the other end of the patch cord to your favorite speaker. For best sound, use a speaker with 8 ohm impedance.
 3. Play a tape or amplify your voice.
 4. Omnibot's onboard speaker will shut-off and ALL sound will come through your add-on speaker.
- D. To use Omnibot as a power source:
 1. Insert 6V DC Coaxial Plug cable to electrical apparatus (6 Volt radio, 6 Volt tape recorder, 6 Volt television, etc.)
 2. Attach opposite end (1/8" mini-plug of Coaxial Plug cable) to Omnibot's OUTPUT 6V jack.
 3. Omnibot will power the electrical apparatus. (Make sure his Battery Pack is fully charged.)
- E. To use Omnibot's MCU as a Remote Control for electrical appliances:
 1. Insert subminiature plug into REMOTE port on your 4.5 to 6V DC electrical apparatus (radio, tape recorder, television, etc.). Opposite end of the cable must have 1/8" mini-plug.

- 2. Plug 1/8" mini-plug into Omnibot's R/C Jack.

- 3. Turn Omnibot's Power Switch ON.

- 4. Set Omnibot's Mode Selector to R/C.

- 5. Turn the MCU ON. Use the GEAR CHANGE key to turn ON and OFF the appliance.

NOTE: You can also operate Omnibot while operating electrical appliance. However, the GEAR CHANGE key will NOT change Omnibot's speed.

F. TIMER and SENSOR Jacks:

- 1. TIMER and SENSOR Jacks are for original TOMY accessories ONLY. You will have to purchase Omnibot 2000 accessories separately. Instructions on how to use the TIMER and SENSOR Jacks will be included with the accessory.

Technical Specifications:

NOTE: All five external jacks, are center pole positive.

OUTPUT Jack: 6V DC

SPEAKER: 8 OHM impedance

R/C: Output 5V DC 800mA

TIMER: Output 6V DC 100mA

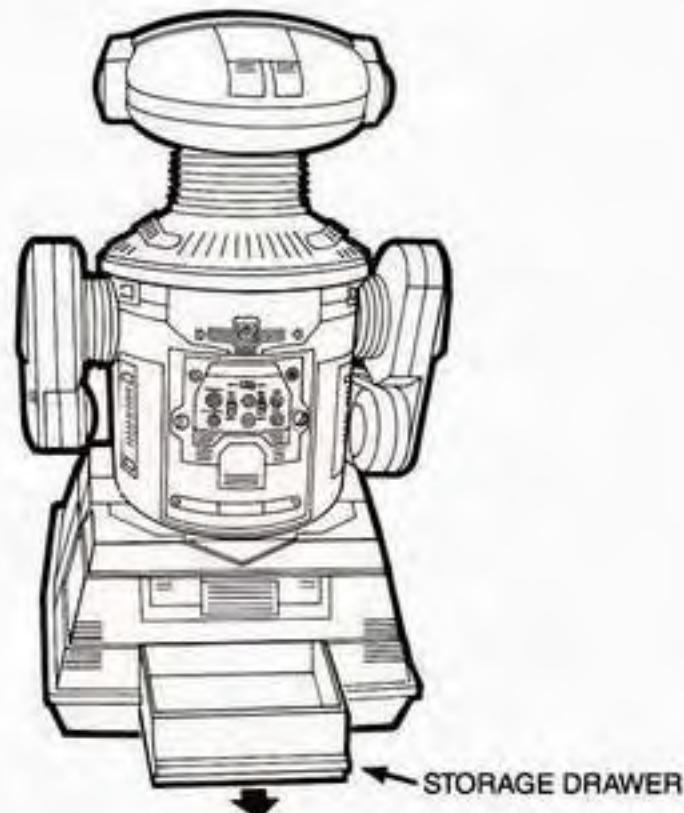

SENSOR: for TOMY accessory only.

STORAGE DRAWER

Omnibot has a built-in storage drawer to keep things handy for you. Use it to store the Charger or MCU when not in use. Place secret messages in it and transport them to your friend. When you purchase accessories, you can store them in the drawer.

To open & close Drawer:

1. Simply pull Drawer out from underneath.
2. Push back into place.

XX. CARE & MAINTENANCE

When Omnidot and/or the Master Control Unit get dirty, surface wash them with a damp cloth. DO NOT USE LIQUIDS OR CLEANSERS OF ANY KIND TO CLEAN AS THIS MAY CAUSE DAMAGE.

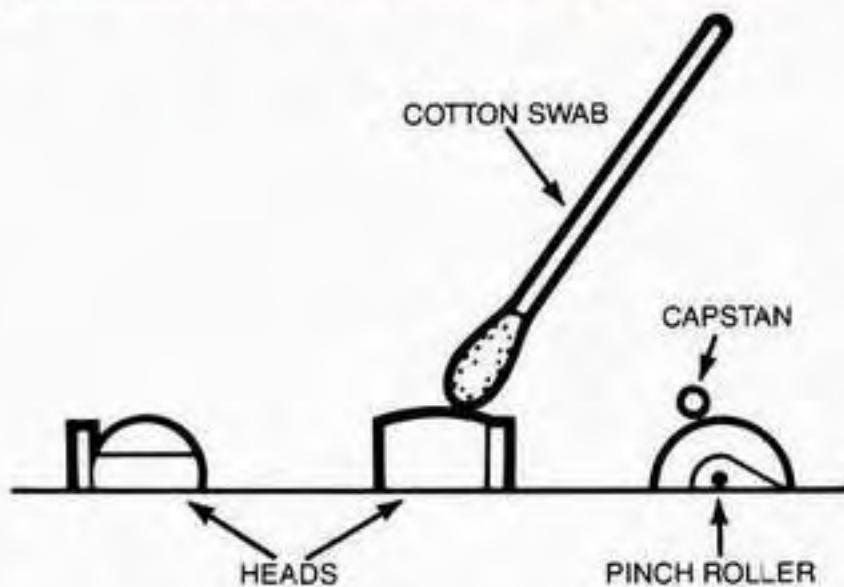

To clean tires, use a damp cloth. DO NOT USE OIL OR ANY OTHER LUBRICATION ON ANY MOVING PARTS.

CASSETTE DECK:

For best performance, you should clean the cassette deck once a month or after 30 hours use.

To clean heads/capstan/pinch roller:

These parts easily collect dust by direct-tape contact, which results in incorrect playing and recording. After long use, these parts should be thoroughly cleaned.

To clean:

1. Slide open cassette unit.
2. Remove cassette if one is inside.
3. Push PLAY button.
4. Carefully clean heads/capstan/pinch roller with a cotton swab.

To clean caked dirt, use a cotton swab dipped in rubbing alcohol.

CASSETTE TAPES:

How to store cassette tapes:

Use a plastic storage case to avoid direct sun, extreme heat, high humidity, dusty places and magnetism. Don't place near a TV set or magnet.

MOTORIZED TRAY:

How to clean tray:

Use a damp cloth to wipe up spilled liquids. DO NOT SUBMERGE TRAY IN WATER OR SERIOUS DAMAGE WILL RESULT.

XXI. SAFETY/CAUTIONS

CAUTION: ELECTRICALLY OPERATED PRODUCT

NOT RECOMMENDED FOR CHILDREN UNDER NINE YEARS OF AGE. AS WITH ALL ELECTRIC PRODUCTS, PRECAUTION SHOULD BE OBSERVED DURING HANDLING AND USE TO PREVENT ELECTRIC SHOCK.

Do not operate Omnidbot in or around water or liquid.

Do not operate Omnidbot around swimming pools.

Do not drop or shake Omnidbot or his Master Control Unit.

Do not move Omnidbot's motorized arm by pulling his hand or forearm. Never force motorized parts.

Always use carrying handles to transport Omnidbot.

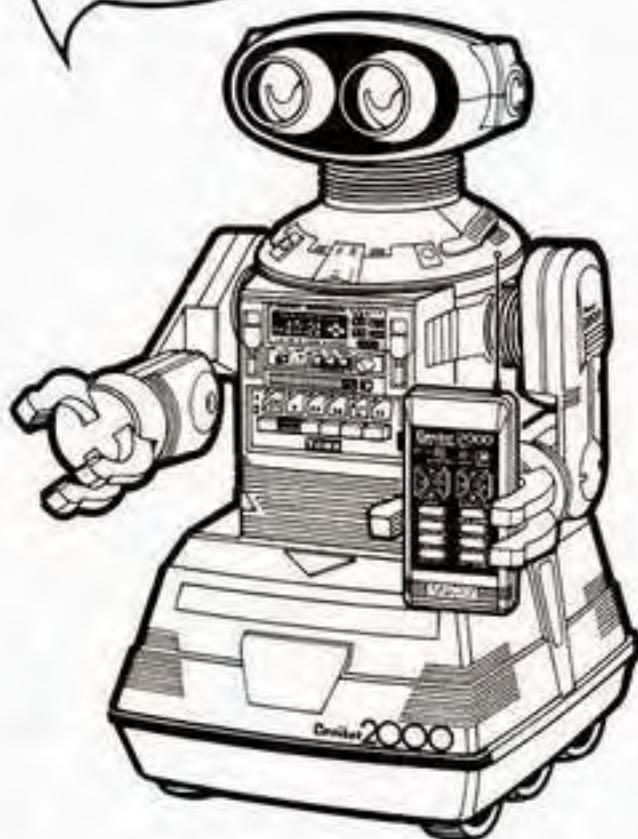

Do not take Omnidbot apart.

Do not expose Omnidbot to extreme temperatures.

Do not hold, bend or twist the antenna on the Master Control Unit.

DO NOT AIM ANTENNA DIRECTLY AT OMNIBOT OR HE WILL NOT RECEIVE CLEAR SIGNALS. AIM ANTENNA STRAIGHT UP.

Please...
take good care
of me.

DO NOT USE LIQUIDS OF ANY KIND TO CLEAN OMNIBOT OR THE MASTER CONTROL UNIT AS THIS MAY CAUSE DAMAGE. When Omnidbot and/or his Master Control Unit get dirty, surface wash them with a damp cloth.

Do not operate two or more Omnidbots in the same location at the same time. Their radio signals will interfere with each others performance.

Do not stall Omnidbot. If he bumps into a wall or obstacle or cannot climb an incline STOP HIM IMMEDIATELY. If he is not stopped or moved, his fuse may burn out.

Never manually move Omnidbot's motorized arm. You may adjust his other arm from his elbow. Do not adjust his other arm by pulling his hand or forearm.

Avoid spilling liquid onto Omnidbot.

When charging Omnidbot, make sure the POWER SWITCH is in the "OFF" position.

Do not use oil or any other lubrication on any moving parts.

When operating Omnidbot by his Master Control Unit:

- a) stay more than 5 feet away from Omnidbot while programming to make sure he gets clear signals.
- b) there can be a greater distance between you and Omnidbot when in R/C mode.

If humming or feedback occur when operating Omnidbot by his Master Control Unit: adjust volume control on Omnidbot and try to move further away.

Do not place stored cassettes near a TV set or magnet. When storing tapes: use a plastic storage case to avoid direct sun, extreme heat, high humidity, dusty places and magnetism.

Do not use loosely wound tapes. It will cause tangling and the tape can be damaged. Press rewind briefly to tighten tapes.

If tangled, use a pencil to slowly and carefully rewind the tape.

The best place to operate Omnidbot is indoors, on a flat surface (tiled floors, hardwood floors, vinyl floors, etc.)

RADIO FREQUENCY INTERFERENCE

Interference from other sources (indoors and outdoors) may have an effect on the performance and distance it takes to effectively transmit a command to Omnidbot. Interference may be caused by a number of factors:

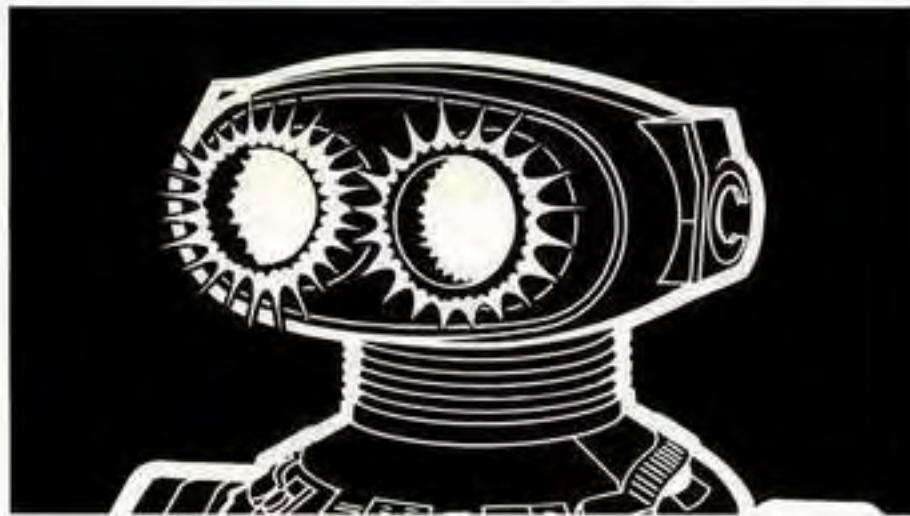

1. Change in temperature
2. Obstructions (walls, structures, etc.)
3. Other interference in the vicinity (cordless telephones, personal computers, fluorescent lighting, large motorized appliances, etc.)

These factors do not indicate that Omnidbot is out of order. If you suspect that any of these conditions is present, take Omnidbot to a different location, and try again.

XXII. OMNIBOT-IDEAS AND USES

BEGINNER LEVEL

1. Set up an obstacle course. See who can get Omnibot from start to finish the fastest. Take turns using the Master Control Unit.
2. Amplify your voice at a presentation.
3. Deliver a recorded speech to go along with a home slide show using Omnibot. You can start and stop along the way for questions or comments using the Tape Start/Stop button on the Master Control Unit.
4. Omnibot is great for playing musical chairs. You can start and stop the music playing on the cassette deck with the Tape Start/Stop button on the Master Control Unit.
5. Record a ghost story with scary sounds. Then, turn out the lights, start the tape, and watch Omnibot's eyes flash in the dark as the story is told.

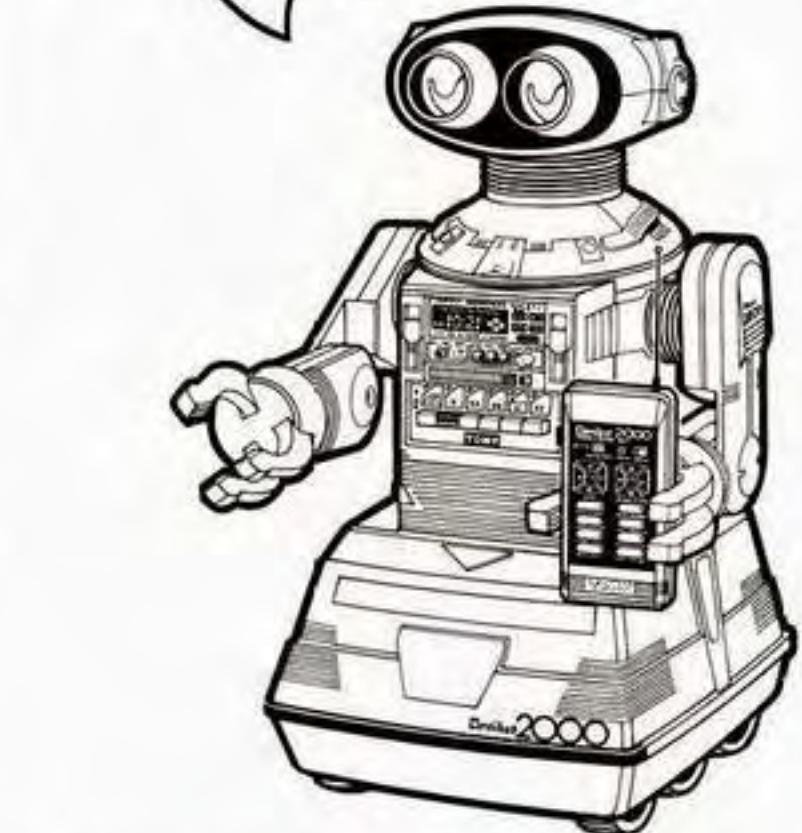

6. Create a stir, take Omnibot for a walk indoors or outdoors using the Master Control Unit.
7. Sing-a-long with your favorite superstar through Omnibot's speaker while the music is playing on the cassette deck.
8. Listen to any standard cassette tapes of music, stories or lectures.

INTERMEDIATE LEVEL

1. Leave a message for your roommate to clean up his/her side of the room.
2. Record your schedule for the next day. Then program Omnibot to remind you while you have breakfast the next morning.

3. Set Omnibot's alarms to remind you of things throughout the day. Example: softball practice at 2:00 pm, your favorite TV show at 8:00 pm, etc.
4. Create your own program library to send Omnibot to various rooms in the house from Home Base. Pop in a tape and Omnibot can deliver things anywhere in the house.
5. Teach your parrot to talk! Position Omnibot by your bird and play recorded words over and over again at pre-programmed times during the day.
6. Study a foreign language. Set Omnibot's alarm storage to play recorded words and phrases throughout the day. Exercise your memory skills each time you hear the tape.

Greetings, Master!
Saludo, Amo.
Salut, Maitre.
Grüsse, Leiter.

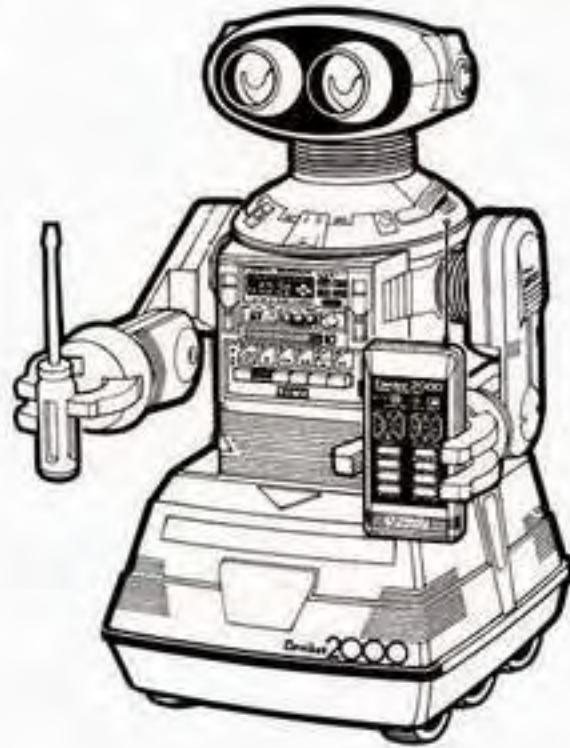

7. Record two voices at once. One person can use the direct microphone, at the same time someone else uses the remote microphone, for a duo sing-a-long.
8. Omnibot can be a kitchen timer. Program a path between the kitchen and the living room. Then set the alarm storage for the desired baking time. Go into the living room and relax. Omnibot will come into the room and remind you when it's ready.

IDEAS AND USES (CONT'D)

ADVANCED LEVEL

1. The robot pick-up challenge! Place an object within Omnidbot's reach. Use the motorized arm to see who can pick-up the object fastest by remote control.
2. Let Omnidbot be your shop helper while fixing your bike. Have him hand you a screwdriver with his motorized arm! Use the motorized tray to carry small tools.

3. With accurate timing, you can create a program that sounds like Omnidbot is really talking with you. Make up the dialogue. Record Omnidbot's lines with enough time between each line to say your own lines. To the amazement of everyone in the room, Omnidbot will come up to you at a pre-set time and begin the conversation.
4. Omnidbot can wake up the whole family, rolling into each bedroom and sounding off three different alarms. Won't mom be surprised when Omnidbot tells her its time to rise and shine.
5. Create scenarios for Omnidbot to add spice to your parties or family get togethers. For example, allow Omnidbot to be your electronic butler for the evening. Omnidbot will greet your guests at the door with flashing eyes and a warm welcome. Have Omnidbot ask each guest to write down what they would like to drink. Send him into the kitchen, change program tapes, and set Omnidbot's motorized tray with your guests' favorite drink. Have Omnidbot return to your guests and pour their drinks, using his motorized arm! Later pop in your favorite music tape, hook-up an external speaker, and listen and relax as Omnidbot fills the room with music.

6. Put an artist's brush or pen in Omnidbot's hand and create robart and illustroids!
7. Record important messages for your family or friends. Set Omnidbot's TIMER to play the tape back when you know they'll be home. You don't have to be home to communicate when you have your own messagoid.
8. Use Omnidbot for party games. Program him to spin round and round and raise his arm. Set him in a circle of friends and start the program. Play ring around the Omni. Whomever he stops and points to is IT!
9. Treat your dog to a robotic snack. Have Omnidbot hold a biscuit, rotate his wrist, and approach your pet. Omnidbot will not be frightened by barkers.
10. With Omnidbot pouring the drinks at your lemonade stand, you'll put your friends out of business!
11. Do impersonations of your favorite TV. or movie stars; store your imitation on tape, then play it back and let Omnidbot be your performeroid. Dress him up, too! Have him wear a cowboy hat, an eyepatch, a holster, and tote a toy revolver as you do your best John Wayne. But be careful: handle Omnidbot with extreme care when dressing him up. Be especially CAREFUL with his motorized arm and head.

12. For additional ideas, check out section XVIII (Accessory Interface Panel). Imagine the unlimited use of Omnidbot with each accessory and combination of accessories.

XXIII. COMMON QUESTIONS

QUESTION

One night, we were watching television and Omnibot was sitting in the corner minding his own business. A plane flew over and Omnibot took off, out of control. Why did he do that?

ANSWER

Omnibot receives radio frequency signals. While you were watching television, he probably woke up when the plane flew over. Omnibot may seemingly take off on his own, but he is actually responding to a radio signal in the area. Planes, garage door openers, television remote controls, and other devices which send radio signals, may cause Omnibot to act as if he has a mind of his own.

QUESTION

Omnibot won't respond when I aim the MCU at him. Why doesn't he move when I tell him to?

ANSWER

You are probably aiming the MCU antenna directly at Omnibot. In order for the signal to be received clearly, keep the antenna aimed and positioned straight up.

QUESTION

I noticed there's a TIMER setting on Omnibot's Power Switch. What does the TIMER do?

ANSWER

The TIMER setting will either sound the alarm or play back tapes at a pre-set time. See section IV (Time of Day), section V (Alarm programming), and section XVI (Cassette Programming).

QUESTION

Omnibot won't work when I turn on the Power Switch. What's the scoop?

ANSWER

Make sure you're setting the Power Switch to ON. Remember: be careful when turning the Power Switch to ON so you don't mistakenly go to the TIMER setting.

QUESTION

Is the Battery Charger Light supposed to be on when I'm using Omnibot?

ANSWER

No. The Battery Charger Light will glow when the Battery Pack needs recharging.

QUESTION

I lost Omnibot's Home Base. Can I still operate him?

ANSWER

Yes! Home Base is simply an indicator—a starting point. You may use any other stationary object as a Home Base: the same corner of a room, a fixed piece of cardboard, etc. The point is to start Omnibot from the same place when you're playing back programmed tapes.

QUESTION

Monday, I programmed a tape, set the timer, and set the Mode Selector to TAPE. Yesterday at 1:33 pm, Omnibot played back my programmed tape, but he didn't go anywhere. I just heard these whirring sounds. Should I send him in for service?

ANSWER

No. There is nothing wrong with your friend, Omnibot. In order for Omnibot to follow your programmed (taped) commands, you must set his Mode Selector to the PROGRAM position. The TAPE position is just to play back music or messages (not movement commands) at a pre-set time.

QUESTION

I read your excellent instruction manual, but I am confused about one thing: when I turn Omnibot on, he doesn't make that bleep sound when he re-sets his motorized parts. Does that mean anything?

ANSWER

Yes! If Omnibot re-sets his motorized parts, but doesn't make a series of bleeps afterwards, the four diamonds on the digital clock are NOT flashing. Push TC, AL, or M to get the diamonds flashing.

QUESTION

I picked Omnibot up by his arms. Now his motorized arm won't work. What should I do?

ANSWER

You should not have picked Omnibot up by his arms. Always use the carrying handles. You should call our toll-free number for service information.

QUESTION

Omnibot keeps bleeping when I'm cassette programming. What's he trying to tell me?

ANSWER

Omnibot's trying to remind you to program a cassette shut-off time. You will continue to get a reject sound unless you program a cassette shut-off time.

XXIV. TROUBLESHOOTING

QUICK-CHECK CHART

Omnibot is a sophisticated machine of the future. There are many things to remember. Don't get frustrated if you run into a problem. Sit down, relax, and go through this Quick-Check Chart point by point.

OMNIBOT

1. Is the Power Switch properly set to either ON or TIMER?
2. Are BOTH Motor Switches on the Accessory Interface Panel ON?
3. Did Omnibot bleep after re-setting when you turned him ON? If not, make sure the diamonds on the digital clock are flashing: press TC, AL, or M.
4. Is the Mode Selector properly set to either R/C, PROGRAM, or TAPE? See the Mode Review chart on the back cover.

CASSETTE UNIT

1. Is a Cassette button pushed in? You must push in a button for the desired tape function, even when using the MCU.
2. Make sure the Tape Start/Stop key on the MCU is ON?
3. Is the Power Switch on Omnibot ON?
4. If operating with TIMER, is the Cassette Symbol displayed on the clock?
5. Are the diamond flashing? Press AL, M, or TC to get the diamonds flashing.

MASTER CONTROL UNIT

1. Is the Power Switch ON?
2. Is the antenna extended?
3. Are you aiming the antenna at Omnibot? Don't!

IF YOU ARE STILL HAVING PROBLEMS, SEE TROUBLESHOOTING CHART ON NEXT PAGE.

IF YOU HAVE ANY QUESTIONS, call toll free number for assistance:

(800) 421-5597 FOR OUTSIDE CALIFORNIA

(800) 421-8496 FOR CALIFORNIA RESIDENTS

TROUBLESHOOTING (CONT'D)

PROBLEM:	POSSIBLE REASONS:
Omnibot does not move with Master Control Unit.	<ol style="list-style-type: none">1. Omnibot power switch ON?2. MCU power switch ON?3. MCU antenna extended?4. Wrong Mode selected? (check Mode Review)5. Check fuse.6. Check Alkaline Batteries (Omnibot & MCU)7. 6-Volt Battery charged?
There is feedback when operating in R/C or PROGRAM.	<ol style="list-style-type: none">1. Volume too high.2. MCU too close to Omnibot.
Omnibot does movements you did not program. (In Program mode playback).	<ol style="list-style-type: none">1. Clean Heads/Capstan/Pinch Roller. (see Care & Maintenance section).2. Radio Frequency Interference? (see Safety/Cautions section).
When programming, Omnibot blinks 1:00 am Sunday at you and gives you a reject sound.	<ol style="list-style-type: none">1. You already have a program in another storage for that exact time and day.2. You forgot to program a shut-off time for Cassette Programming (see Cassette Programming section).3. You skipped two unprogrammed storages after programming another storage (see Alarm Programming section).
Omnibot does not travel in a straight line.	See Steering Adjustment section.
Omnibot does not repeat exact movements on programmed cassette.	<ol style="list-style-type: none">1. You made a steering adjustment and did not re-program the cassette (see Steering Adjustment section).2. You failed to turn Omnibot OFF, then ON to allow him to re-set. Once Omnibot re-sets to his original position and bleeps, then turn Power Switch to TIMER.
No robot sounds.	Clock Display must be in Time of Day (with diamonds flashing)—not Alarm Storage or Memory.
Tape won't start from Master Control Unit.	Clock Display must be in Time of Day (with diamonds flashing)—not Alarm Storage or Memory.
Omnibot's Time Display won't respond when you push TC, T1, T2, AL, or M.	You turned the cassette program off manually (before the shut-off time) and failed to push SET. (See NOTE on page 33)—To remedy, push SET.

XXV. TECHNICAL SPECIFICATIONS

1. CASSETTE RECORDER

Type: 2 track monaural
Tape Selection: normal bias only
Tape Speed: $\pm 0.3\%$
Wow & Flutter: within 0.3%

2. ALARM CLOCK

Display: liquid crystal display
Accuracy: ± 3 sec/day
Power Supply: 1.5 V alkaline size AA, 2 required
Battery Life: 5,000 hours typical

3. BATTERY CHARGER, (U.L. LISTED)

Type: plug-in AC adapter with 6 foot cord and coaxial "barrel type" connector, (negative center pole)
Input: 120 VAC, 60 HZ, 10 WATTS
Output: 6 VDC, 300 mA

4. RECHARGEABLE BATTERY

Type: sealed lead acid
Output Rating: 6 V, 4.0 Ah
Physical Size: 2 $\frac{3}{4}$ " L x 1 $\frac{3}{4}$ " W x 4" H
Terminals/Connectors: lead wires with coaxial "barrel type" connector (negative center pole)

5. GENERAL

Battery Life: 4 hours continuous at 5.5 Volts (normal)
Battery Indicator: red light indicates when discharged to 5.7 Volts
Operating Temperatures: 5°C ~ 40°C (41°F ~ 104°F)

6. ACCESSORIES

Motorized Tray (included): 3 lbs. maximum weight allowance

External Auxiliary Microphone: Dynamic Microphone, 1/8" mini-plug, 300 ~ 600 OHM impedance (not included)

7. OPERATING FREQUENCY: 49.860 MHz

8. EXTERNAL JACKS

NOTE: All five external jacks, are center pole positive.

OUTPUT Jack: 6V DC

SPEAKER: 8 OHM impedance

R/C: OUTPUT 5V DC 800mA

TIMER: OUTPUT 6V DC 100mA

SENSOR: FOR TOMY ACCESSORY ONLY.

9. EYE BULBS

2.8V, 200mA DO NOT REPLACE WITH BULBS LARGER THAN 3V, 250mA.

XXVI. WARRANTY INFORMATION

OMNIBOT 2000™ Warranty

Limited 90-day warranty on Omnidot 2000™ Product (valid in U.S. only)

TOMY Corporation warrants to the original consumer purchaser that this Omnidot 2000 shall be free from any defects in materials or workmanship for a period of 90 days from the date of purchase. This limited warranty does not apply to cassette tapes and accessories purchased by the consumer. Should you find, during the warranty period, that this Omnidot 2000 Product is defective, TOMY will repair or replace the Product, at its option, free of charge. To receive this warranty service you must do the following:

1. Notify the Tomy Corporation of the problem requiring warranty service by calling either one or the other of the following numbers:
Outside California (800) 421-5597
Inside California (800) 421-8496
2. Send the Tomy Corporation the product and reasonably acceptable proof of the date of purchase of the product prepaid at your risk of damage during shipment addressed as follows:

Tomy Corporation
Omnidot 2000 Customer Service
901 East 233rd Street
P.O. Box 6252
Carson, CA 90749

During your phone call, the Tomy Corporation's representative will discuss the problem you are having with the Omnidot 2000. Frequently this representative will be able to suggest to you a way to avoid returning the product to the Tomy Corporation.

This warranty shall not apply if Omnidot 2000 has been damaged by negligence, accident, unreasonable use, or by other causes unrelated to defective materials, or workmanship. This warranty is also void if the serial number has been altered, defaced or removed.

Any applicable implied warranties arising out of the sale of this unit, including warranties of merchantability and fitness for a particular

purpose, are hereby limited to ninety days from the date of purchase. TOMY's liability is limited to the repair or replacement of the defective unit in its sole discretion. Consequential or incidental damages resulting from a breach of any applicable express or implied warranties are hereby excluded.

TOMY shall have no liability or responsibility to a purchaser, customer or any other person or entity with respect to any liability, loss or damage caused or alleged to be caused directly or indirectly by any cassette tapes. This includes, but is not limited to, any interruption of service, loss of business or anticipatory profits or consequential damages resulting from the use or operation of such cassette tapes.

The provisions of the foregoing warranty are valid in the United States only. This warranty gives you specific legal rights and you may also have other rights which vary from state to state. Some states do not allow limitations on how long an implied warranty lasts and/or do not allow the exclusion of incidental or consequential damages, so the above limitations and exclusions may not apply to you.

Out of warranty repair: If your Omnidot 2000 Product requires service other than under warranty, please contact TOMY CORPORATION for repair information at the following address:

TOMY CORPORATION
Omnidot 2000 Division
Customer Service
901 E. 233rd Street
P.O. Box 6252
Carson, CA 90749.

TOMY'S STATE-OF-THE-FUN ROBOTS!™

FLIPBOT®

He's the get up and go robot who won't stay down! Flipbot spins his arms as he walks along. If he falls down, he flips his way over and flops back up!

HOOTBOT™

It's love at first hoot with this fun-tastic robot owl! Watch him go, go, go! Flashing Eyes—Flickering Tail—Flapping Wings—Moving Head & Feet! Comes with his very own perch! Hoot! Hoot!

SPOTBOT™

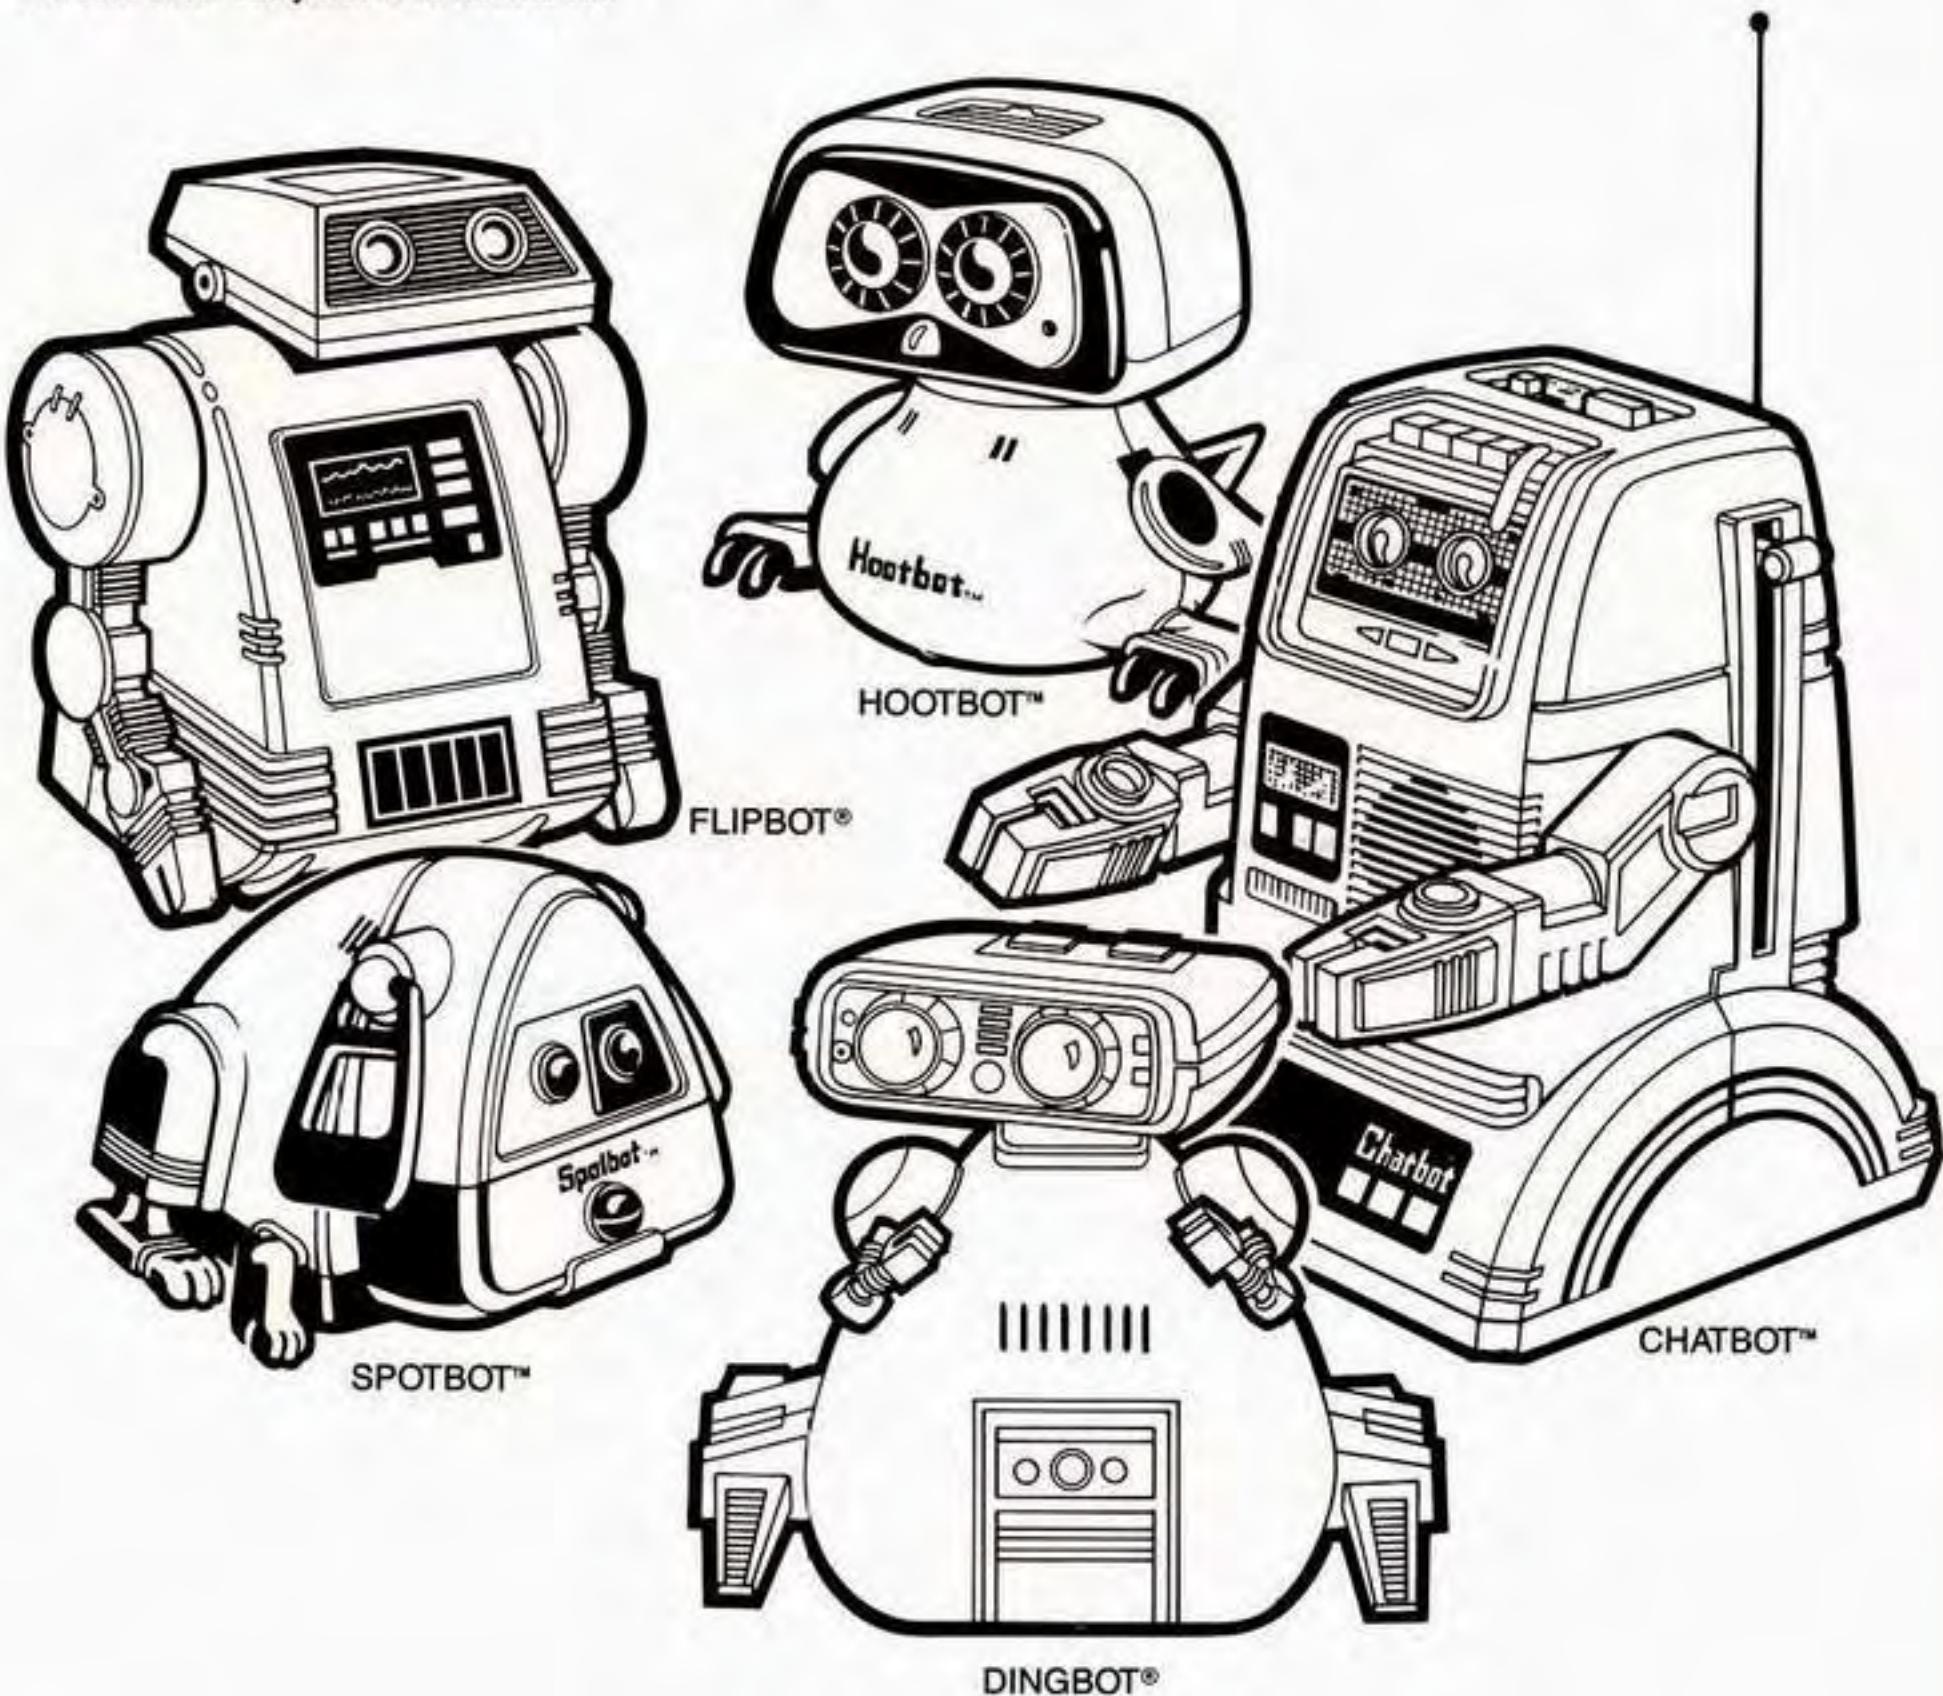

A puppy robot? That's right! See Spot run —Shake his head—Bump & change direction —Wag & chase his tail! He can even carry notes in his mouth!

CHATBOT™

A robot that records and delivers messages by remote control! Deliver objects in his hands or on his detachable tray—all by remote control! What's more? How about recording a secret message on tape and delivering it to your friend in another room!

DINGBOT®

The non-stop comedian. He chatters. He turns his head. A fast traveling robot who bumps into obstacles, then speeds off in another direction! He carries his own Floor Plan in his poseable arms. A funny robot who's still learning the meaning of walls!

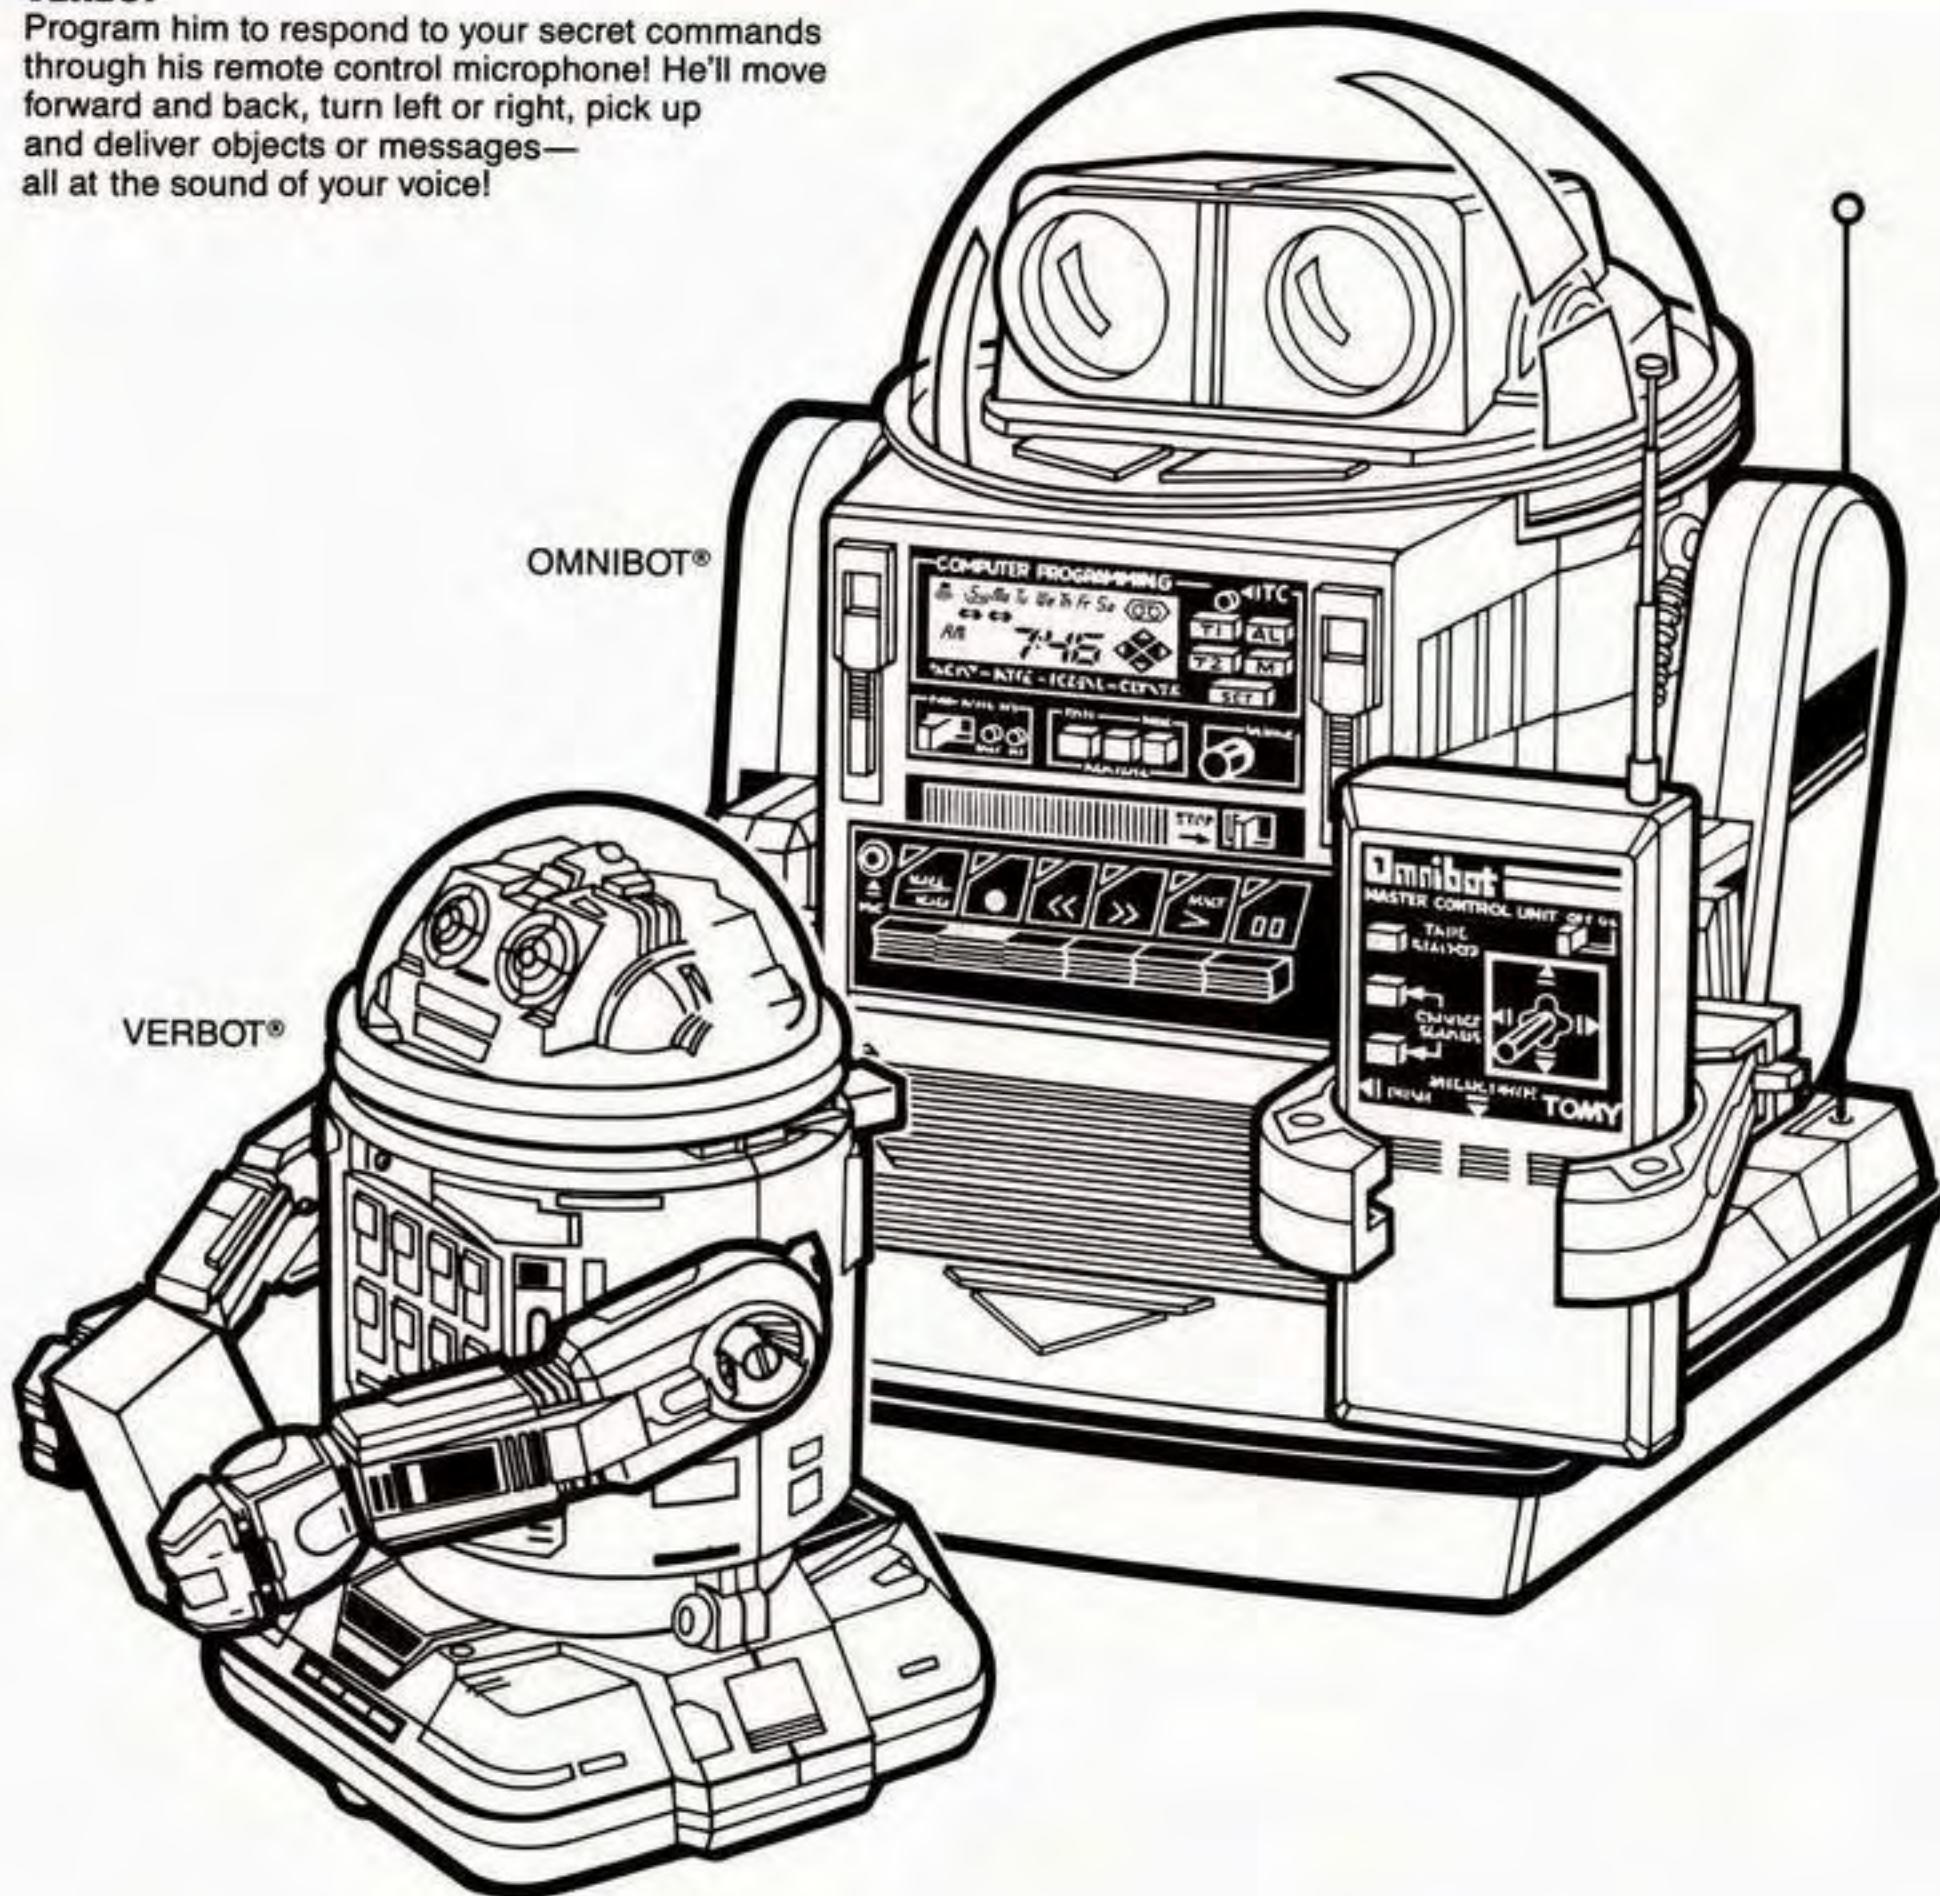

OMNIBOT®

The future is now with Omnibot's 7-day, 7-command memory! He operates by wireless remote control, walks, talks, and carries objects on his detachable tray. Use him as an alarm, a cassette player, a mechanical messenger!

VERBOT®

Program him to respond to your secret commands through his remote control microphone! He'll move forward and back, turn left or right, pick up and deliver objects or messages—all at the sound of your voice!

QUICK-CHECK CHART

Omnibot is a sophisticated machine of the future. There are many things to remember. Don't get frustrated if you run into a problem. Sit down, relax, and go through this Quick-Check Chart point by point.

OMNIBOT

1. Is the Power Switch properly set to either ON or TIMER?
2. Are BOTH Motor Switches on the Accessory Interface Panel ON?
3. Did Omnibot bleep after re-setting when you turned him ON? If not, make sure the diamonds on the digital clock are flashing: press TC, AL, or M.
4. Is the Mode Selector properly set to either R/C, PROGRAM, or TAPE? See the Mode Review chart above.

CASSETTE UNIT

1. Is a Cassette button pushed in? You must push in a button for the desired tape function, even when using the MCU.
2. Make sure the Tape Start/Stop key on the MCU is ON?
3. Is the Power Switch on Omnibot ON?
4. If operating with TIMER, is the Cassette Symbol displayed on the clock?
5. Are the diamonds flashing? Press AL, M, or TC to get the diamonds flashing.

MASTER CONTROL UNIT

1. Is the Power Switch ON?
2. Is the antenna extended?
3. Are you aiming the antenna at Omnibot? Don't!
